

June 8, 1953

Senny Creek.

Went up to study spawning of
Pantosteus, *Rhinichthys*, or *Cela*, which were
cooperated.

Pantosteus - probably though - eggs are
common in the stream.

~~*Rhinichthys*~~
Cela - nothing known

Rhinichthys Prof. spawning.

Made a small collection 1 mile
above mouth of Guadalupe Cr. #77070 1120
Time 1050-1120. Rh. ripe.
~~Was~~ almost clear.

Cy. ~~not~~ much of Senny between
Guadalupe + above Senny Spring.

3 Rh. found dead. J - ad ♂.

Rh. just sp. 3 miles above Guadalupe,
not actually seen but actions indicate sp.

Picked up an emerging dragonfly,
nymphal case + adult. Ad. were dipping tail in a
over rip. ~~the~~ Mid afternoon.
