

Sept. 14, 41 #1

WJK41-09-14-01

Seined the Rio Grande just below the diversion dam north of the Central Ave Bridge, with Used the 25' seine, was aided by Frederick W. Worman and Earl Camp. Worked 9:20<sup>AM</sup> till 12:20 P.M.

About two thirds of the river seemed to be diverted into the local irrigation ditches. The river seemed to be about 200 feet across. The depth was mostly between 1 and two feet. A few of the holes just below the weir dam were  $4\frac{1}{2}$  + feet deep. Current moderate, bottom mostly silt a few small gravel and rubble patches. Water white very turbid. Except immediately below dam, the pools are essentially non-existent. Shore - high earth bank on west, farms on east, wide mud flats between each and the water. Stream about normal height. Fish were scarce, less than a gallon all told being taken. Food poor. Air 76 W 69.5 F 12:30 P.M. Partly cloudy. All fish saved.
