

August 1, 1939.

Revisited the ponds where we caught the
toads and snakes last night and secured name tadpoles and
two more snakes.
The ponds turned out to be a series of isolated pools
left in an intermittent-stream bed.

Left camp which turned out to be 17 miles
S.E. of Dilia toward Colonias (Mileage 5549).
Saw a mountain boomer about 12 miles S.E. of

Dilia

WJK39-08-01-01

Secured for a few minutes in the Perro R. just
south of Dilia where Highway 84 crosses it. The
stream was very high and muddy. Very few fish
were obtained because of its condition. Decided
to go to the headwaters to get away from the floods.
Drove up the Gallinas R. to the Santa Fe National
forest over a mountain highway that was
under construction. Had to be pulled up
and around one steep sharp turn. Camped
at the edge of the forest.

August 2, 1939 #1

Scanned the Gallinas river at the eastern edge of the Santa Fe National Forest. The stream is high and murky from the heavy thunderstorms yesterday and previous days. Saw about 8' ^{wide} at riffles 12' at pools, 6" to 3' deep. Bottom rubble, current moderate to strong. No vegetation. Scanned about 3/4 hour, fished with natural nymphs for about an hour. Caught 1 Salmo gairdneri on a Tipula larva, 2; (dd; 149) Salmo faris in seine. - Pools and riffles fair. Come for stream good. Food moderately good. Large "Perla" and "Tipula" were especially common. The stream is stocked ~~at~~ mostly with brown trout.
