WJK39-08-03-01

Left camp (Mileage 5638) at point where the Gallinas river ~~enters~~ leaves the Santa Fe National Forest.

Saw
Collected 1 Sceloporus connotatus about 3 miles SE of the Gallinas Ranger station. Also saw one at camp but failed to catch it. Collected one of this species just above Hat Springs.

Searched Gallinas Creek (River) about a mile above the edge of Las Vegas. The stream is much smaller here than it was higher up. The water is taken for irrigation and also to supply Las Vegas. Saw a stream 2-4' wide ref., -10' wide in F., Depth 4-6" ref., P 30'. Water probably white, very turbid. The stream was "high" - probably about or normal flow but still much lower than recently. A 75W 7012 M.
