

June 5, 1951

with John Danohoe.

Went to Jersey to check on Gila spawning. They are ripe. No young appear to be present except of Pantosticus

Collected a few Gila + RT 1-3 miles above mouth of Rio Guadalupe.

Angling not fly, mostly #75 667 1740

Parked up a striped racer <sup>LOR</sup> 1 mile below mouth of R. Guadalupe. Elev 5700 ft. 1045 Clear. Mostly bare red sandstone with scattered junipers

Found 2 DOR red racers, One sand, the other was much too badly damaged. There was considerable difference in color. The lighter was over sand. The other was very much deeper red and had more pronounced streaks on the scales.

N. M., Sandoval Co., near Jemez Pueblo
