Fish seemed scarce, but it may have been difficult in catching. A number of fine places were devoid of fish. The shallows did not have young except for an occasional suckling.

Pantostomus delphimus

taken from ^{one} deep hole at end of riffle

Catostomus latipinnis

with above

Rhinichthys rubilus

Pc - widely distributed.

Astus borealis punctulatus

Pc widely scattered ~~except~~
 yg in quiet rocky shallows, also
 in water places in rf. Not in
 fast water.

Isula

tried hard for
