Planning and Implementing a Public Health Certificate (PHC) for All Medical Students at the University of New Mexico

Lily Dow Velarde and Arthur Kaufman

DEPARTMENT OF FAMILY AND COMMUNITY MEDICINE
UNIVERSITY OF NEW MEXICO SCHOOL OF MEDICINE, ALBUQUERQUE, NEW MEXICO, USA

CONTEXT

The University of New Mexico School of Medicine (UNM SOM) will require that all medical students graduate with a Public Health Certificate (PHC). Strategies to overcome identified barriers to implementation of the Certificate have been identified.

OBJECTIVES

- To illustrate the process involved in implementing the PHC
- To share the planning and implementation outcomes

SETTING

- Southwestern, U.S. Institution of Higher Education (IHE), the UNM SOM in collaboration with one other IHE, community agencies and organizations

INTERVENTIONS

- Assess and modify institutional policies and resources that may hinder implementation of the PHC
- Identify where PHC curriculum elements can be integrated into existing courses and training venues (Table 2)
- Develop evaluation measures to measure outcomes

MAIN OUTCOMES

Integration of the PHC in the medical school curriculum; inter and intra collaboration of the various programs, divisions, and departments; graduate all medical students with a PHC; assess what works and what needs improvement in the process (Table 1)

TABLE 1: Process to Implement PHC in SOM

= Methods in which Health Systems Topics, Content, and Competencies may be integrated.
Examples:
- In Practical Immersion Experience (PIE) pilot with one of students’ PIE patients. Get patient and preceptor consent. Student would keep track of a PIE patient from June to Dec. 15. Venues to keep track of patient and report could include Telemedicine and Narrative Strands.

CONCLUSIONS

- The process of creating a required PHC for all medical students is very rewarding, yet challenging. Extensive planning, flexibility, creativity, collaboration, and resources are essential to make the PHC a reality
