On April 14, the Cuban domestic news service AIN reported that a Cuban-designed sugar mill will begin operations in Vietnam at the end of the month. The facility is the second constructed abroad with Cuban technology. The mill, located on a farm 40 km. from the city of Tay Ninh in southern Vietnam, will have the capacity to mill around 500 metric tons of sugarcane per day. According to AIN, the new mill is among the largest in Vietnam. The other existing mill built with Cuban technology abroad is in Nicaragua. Cuba also sells cane-harvesting machines in Asia and Latin America.
