National Library Week: There's More to the Story (RECIS)

by Brandon Carroll on April 28th, 2023 | [o Comments](#)

There's More To RECIS!

The Research, Education, and Clinical Information Services division (also known as RECIS) is a group of expert library faculty that provide teaching, reference and research support, clinical information, student success initiatives, and outreach to the state of New Mexico. Our teaching is embedded across the HSC curricula, the clinical and research enterprise, and provided to communities across New Mexico. Our faculty conduct research on a wide range of topics related to the use, application, and disparities related to information. We work with students, faculty, staff, consumers, and healthcare professionals throughout the state. It would take more than one blog post to highlight the amazing work that our faculty do, but here is a brief introduction:

Lisa M. Acuff, MPH, MSIS, AHIP, (she/her/hers), Education and Research Librarian

What is unique about your role? I collaborate with graduate nursing, occupational, and physical therapy programs to facilitate literature-searching skills and critical thinking about information. I also participate on the Interprofessional Education (IPE) committee to develop programming for students and faculty across all HSC units.

What is a current project you'd like to highlight? I especially enjoy instructional design and recently created resources for literature searching in the health sciences. They are available in two places: 1) a module in Canvas Commons called Searching Health Sciences Literature and 2) a toolkit in the [Open Science Framework](#). All resources have a Creative Commons license and are free to share and adapt under specified terms. I hope you find them useful!

Deirdre Caparoso, MLIS, (she/her) Outreach and Community Engagement Librarian

What is unique about your role? My work on the RECIS team is unique. I am responsible for building collaborative community partnerships to improve and expand access and understanding of health information resources throughout the state. I started this position in March and am eager to work with a wide array of New Mexican communities and HSLIC faculty and staff.

What is a current project you'd like to highlight? I am currently most excited about learning to navigate the complexities of medical librarianship, creating a systematic internal approach to community outreach, and working toward a first-year plan for this position. Long term, I hope to learn more about the health information needs of Southern and Eastern New Mexico.

Jon Eldredge, MLS, PhD, AHIP, FMLA, Evidence-Based Practice Librarian

What is unique about your role? My faculty research program encompasses a variety of methods ranging from the qualitative Delphi Method to the more quantitative Randomized Controlled Trial. I have published 71 peer-reviewed journal articles and 22 book chapters. I have been serving as an instructor of record to seamlessly integrate HSLIC-related competencies into our medical school, physician assistant, and MPH curricula.

What is a current project you'd like to highlight? With the generous assistance of the Lindberg Fellowship from the Medical Library Association, I am authoring an open-access, peer-reviewed guide to Evidence-Based Practice. Four colleagues and I are developing a consensus-based national research agenda for health information professionals.

Alexis Ellsworth-Kopkowski (she/her), MA, Education & Research Librarian

What is unique about your role? I think my role is unique because I can work across disciplines and on so many different projects. This suits my personality because I have varied research interests and enjoy working on different things throughout the day. I look forward to co-teaching the Rigor and Reproducibility journal club for BioMedical students again this fall.

What is a current project you'd like to highlight? A current project I'd like to highlight is our new graphic medicine collection. Thanks to the support of our administrative team with seed funding, we've purchased a new graphic medicine collection and held two workshops. I hope we can use this project to build on the medical humanities and create a community here at the Health Sciences Library. Come to the library and check something out, <https://libguides.health.unm.edu/exhibit/graphicmedicine>.

Gale Hannigan, PhD, MPH, MLS, AHIP, Research Services Librarian

What is unique about your role? I retired from Texas A&M in 2011 and have worked part-time at HSLIC, mostly responding to literature search requests.

What is a current project you'd like to highlight? The College of Population Health's Academic Health Department grant provides an opportunity to work with other HSLIC librarians to develop evidence-based practice training modules for New Mexico Department of Health personnel. I'm also part of the Welcome to HSLIC project to enhance the space outside the library, and I hope you complete the short survey we sent.

Ingrid Hendrix, (she/her) MILS, AHIP, Division Head, Research, Education and Clinical Information Services

What is unique about your role? As Division Head, I am privileged to work with an outstanding team. My role is to support the faculty in RECIS and foster a collaborative community of practice. Being

open to new opportunities while ensuring the sustainability of services is key to my role.

What is a current project you'd like to highlight? Streamlining and codifying existing service models such as our systematic review service and statistics tracking. Also, I am working with a national team of physical therapists to develop a clinical practice guideline on idiopathic toe walking, providing literature searching and information management.

Kelleen Maluski, she/her, MLIS, Student Success and Engagement Librarian

What is unique about your role? My role is about ensuring students have the resources they need to meet their goals. I really love that this places more emphasis on our students empowering themselves. My role is about listening and responding to what you all say is important to you!

What is a current project you'd like to highlight? I was extremely honored to work with our Peer Information Partner, Zohie Cardenas. Although consultation services for our Peer Information Partners were not taken advantage of, it was an amazing learning experience, and Zohie did so much to improve student access to resources. Right now, Zohie is working on Quick Tip videos that we will be releasing soon to help you become more familiar with the library's resources.

Deborah J Rhue, MLIS (she/her/hers), Clinical Services Librarian

What is unique about your role? My primary duty is to support the clinical and research needs of HSC's physician residents and fellows.

What is a current project you'd like to highlight? My research interests include the GME Milestones and health literacy. Currently, I am working on a research project about ways to help librarians organize the systematic review process.

Stay up to date with HSLIC resources, services, events, and more!
