SHIVWITS BAND OF THE PAIUTE INDIAN TRIBE OF UTAH
WATER RIGHTS SETTLEMENT AGREEMENT

AGREEMENT

This Settlement Agreement is made and entered into on January 18, 2001, by and among the Bloomington Canal Company; Edward Bowler, a shareholder in the Gunlock Irrigation Company; Ivins Irrigation Company; the Lower Gunlock Reservoir Corporation; the New Santa Clara Field Canal Company; the Shivwits Band of the Paiute Indian Tribe of Utah; the Southgate Irrigation Company; the City of St. George, Utah; the St. George Clara Field Canal Company; the United States of America; the State of Utah; and the Washington County Water Conservancy District. The Parties to this Agreement are described more fully in the Santa Clara Project Agreement and the St. George Water Reuse Project Agreement.

1.0 DEFINITIONS

Unless otherwise defined in this section 1.0, the capitalized terms used in this Agreement shall have the meaning assigned to those terms in section 3.0 of the Santa Clara Project Agreement and section 3.0 of the St. George Water Reuse Project Agreement.

1.1 “Member” means any person who is a duly enrolled member of the Shivwits Band of the Paiute Indian Tribe of Utah.

2.0 STIPULATIONS AND AGREEMENTS

This Agreement includes additional and essential agreements for settlement of litigation, which are attached as Exhibits B, C, and D, incorporated into this Agreement by reference, and are described as follows:

2.1 The Santa Clara Project Agreement (Exhibit B)

2.2 The St. George Water Reuse Agreement (Exhibit C)

2.3 Judgment and Decree (Exhibit D)

3.0 SHIVWITS WATER RIGHTS

The Shivwits Band and its Members shall have the following rights to water which shall be held in trust by the United States for the benefit of the Shivwits Band and its Members:

<table>

</table>

3.1 The above-listed water sources, supplies, and priorities are more specifically described in the following Sections 4.0, 5.0, 6.0, and 7.0, and Exhibits B, C, and D.

3.2 The Shivwits Band may use the Shivwits Water Rights for any use permitted by Tribal or Federal law, including uses that totally deplete the water diverted, anywhere within the boundaries of the Shivwits Reservation, and such use, after delivery to the Reservation, shall not be subject to State law, regulation or jurisdiction.

3.3 The Shivwits Water Rights shall not be subject to loss by abandonment, forfeiture, or non-use.
3.4 The Shivwits Band may use the Shivwits Water Rights for any beneficial use off the Shivwits Reservation in accordance with the St. George Water Reuse Agreement (Exhibit C), the Santa Clara Project Agreement (Exhibit B), or this Agreement, and all applicable Federal and State laws.

4.0 SHIVWITS GROUNDWATER RIGHT

The Band shall have the right in perpetuity to the use of the groundwater underlying the Shivwits Indian Reservation up to 100 acre-feet annually. The priority of the Shivwits Groundwater Right shall be April 21, 1916.

5.0 SHIVWITS REUSE WATER RIGHT

The Band shall have the right in perpetuity to 2,000 acre-feet of water annually from the St. George Water Reuse Project, as set forth more fully in the St. George Water Reuse Project Agreement, which is attached as Exhibit C and incorporated herein by reference. The Shivwits Band shall have the first priority to the reuse water provided from the St. George Water Reclamation Facility.

6.0 SHIVWITS SANTA CLARA WATER RIGHT

The Shivwits Band shall have the right in perpetuity to 1,900 acre-feet of water annually from the Santa Clara River System, with an 1890 priority date, in accordance with the terms of the Santa Clara Project Agreement, which is attached as Exhibit B and incorporated herein by reference.

7.0 ON-RESERVATION SPRINGS AND RUN-OFF

The Shivwits Band may use water from the springs and run-off located on the Shivwits Reservation. The amount used from these sources will be reported annually to the Utah State Engineer by the Shivwits Band and shall be counted against the annual 4,000 acre-feet Shivwits Water Rights.

8.0 ADDITIONAL PROJECTS

8.1 Nothing in this Agreement shall be interpreted or construed to prevent the Shivwits
Band from participating in any other water projects or agreements, including but not limited to those projects identified in the Memorandum of Understanding among the State, the District, and the Shivwits Band executed concurrently with this Agreement, and attached as Exhibit E.

8.2 The provision of domestic water provided to the Shivwits Band is set forth in the “AGREEMENT FOR SALE OR EXCHANGE OF DOMESTIC QUALITY WATER BY AND BETWEEN THE SHIVWITS BAND OF THE PAIUTE INDIAN TRIBE OF UTAH AND THE CITY OF ST. GEORGE, UTAH”, executed concurrently with this Agreement, and attached as Exhibit F.

8.3 Nothing in this Agreement obligates the United States to pay for the Shivwits Band’s participation in future water projects or precludes the United States from choosing to pay for the Shivwits Band’s participation in future water projects.

9.0 WAIVERS AND RELEASE OF CLAIMS

9.1 Definitions. For purposes of this Section 9.0:

9.1.1 “water rights” means rights under state and federal law to divert, pump, impound, use or reuse, or to permit others to divert, pump, impound, use or reuse water.

9.1.2 “injuries to water rights” means the loss, deprivation, or diminution of water rights.

9.1.3 “Local Parties” means all signatories to this Agreement except the United States, the Shivwits Band, and the Paiute Indian Tribe of Utah acting on behalf of the Shivwits Band.

9.1.4 “United States Acting in Its Trust Capacity” means the United States acting for the benefit of the: (a) Shivwits Band; and (b) Paiute Indian Tribe of Utah acting on behalf of the Shivwits Band.

9.2 Waivers of Claims by the Local Parties.

Except as otherwise provided in this Settlement Agreement, the Settlement Act, or the Judgment and Decree, the Local Parties, by virtue of their execution of this Settlement
Agreement, hereby waive and release all claims for water rights or injuries to water rights for lands within the Virgin River System that accrued at any time up to and including the Effective Date determined by section 14(a) of the Settlement Act, and any continuation thereafter of any of these claims, that the Local Parties may have against the Shivwits Band or its Members, the Paiute Indian Tribe of Utah acting on behalf of the Shivwits Band, or the United States Acting in Its Trust Capacity.

9.3 Waiver of Claims by the Shivwits Band and United States Acting in Its Trust Capacity Against the Local Parties.

Except as otherwise provided in this Settlement Agreement, the Settlement Act, or the Judgment and Decree, the Shivwits Band on behalf of itself and its Members, and the United States Acting in Its Trust Capacity, by virtue of their execution of this Settlement Agreement, hereby waive and release:

9.3.1 All claims for water rights or injuries to water rights for lands within the Shivwits Reservation that accrued at any time up to and including the Effective Date determined by section 14(a) of the Settlement Act, and any continuation thereafter of any of these claims, that the Shivwits Band, its Members, or the United States Acting in Its Trust Capacity may have against the State of Utah, any agency or political subdivision thereof, or any person, entity, corporation or municipal corporation.

9.3.2 All claims for water rights or injuries to water rights for lands outside of the Shivwits Reservation, where such claims are based upon aboriginal occupancy by the Shivwits Band, its Members, or their predecessors, that accrued at any time up to and including the Effective Date determined by section 14(a) of the Settlement Act, and any continuation thereafter of any of these claims, that the Shivwits Band, its Members, or the United States Acting in Its Trust Capacity may have against the State of Utah, any agency or political subdivision thereof, or any person, entity, corporation, or municipal corporation.

9.3.3 All claims for trespass to lands on the Shivwits Reservation regarding the
use of Ivins Reservoir that accrued at any time up to and including the Effective Date determined by section 14(a) of the Settlement Act. The continued use of the Ivins Reservoir is addressed in the Santa Clara Project Agreement.

9.4 **Waiver of Claims by the Shivwits Band Against the United States.**

Except as otherwise provided in this Settlement Agreement, the Settlement Act, or the Judgment and Decree, the Shivwits Band on behalf of itself and its Members, by virtue of their execution of this Settlement Agreement, hereby waive and release:

9.4.1 All claims for water rights that accrued at any time up to and including the Effective Date determined by section 14(a) of the Settlement Act, and any continuation thereafter of any of these claims, that the Shivwits Band or its Members may have against the United States, its agencies or employees.

9.4.2 All claims for injuries to water rights, or failure to protect, acquire or develop water rights that accrued at any time up to and including the Effective Date determined by section 14(a) of the Settlement Act, and any continuation thereafter of any of these claims, that the Shivwits Band or its Members may have against the United States, its agencies or employees.

9.4.3 All claims for uncompensated rights of way and trespasses by any person or entity regarding the presence and use of Ivins Reservoir, Winsor Dam, Ivins Canal (aka the Santa Clara Bench Canal), the City of St. George underground domestic water pipeline and water storage tank, and any other uncompensated uses or trespasses related to water conveyance or storage on the Shivwits Reservation that accrued at any time up to and including the Effective Date determined by section 14(a) of the Settlement Act, and any continuation thereafter of any of these claims, that the Shivwits Band or its Members may have against the United States, its agencies or employees. The continued use of Ivins Reservoir is addressed in the Santa Clara Project Agreement.

9.4.4 All claims arising out of or resulting from the negotiation or the adoption of this Settlement Agreement, exhibits to this Settlement Agreement, the Settlement Act, or any
specific terms and provisions thereof, that the Shivwits Band or its Members may have against the United States, its agencies or employees.

9.5 **Effectiveness of Waivers.**

9.5.1 Nothing herein acknowledges the existence or validity of any claims that are being waived and released.

9.5.2 The waivers herein from all Parties are effective upon publication in the Federal Register of the statement by the Secretary of the Interior described in section 14(a) of the Settlement Act.

9.6 **Reservation of Rights and Retention of Claims by the Shivwits Band and the United States Acting in Its Trust Capacity.**

Notwithstanding the waivers and releases described in subsections 9.3 and 9.4, the Shivwits Band, its Members, and the United States Acting in Its Trust Capacity, shall retain:

9.6.1 All claims for enforcement of the Settlement Agreement, the Settlement Act, or the Judgment and Decree through such legal and equitable remedies as may be available in any court of competent jurisdiction.

9.6.2 All claims for water rights and injuries to water rights acquired after the Effective Date determined by section 14(a) of the Settlement Act.

9.6.3 All rights not specifically waived and released in this Settlement Agreement.

9.7 **Reservation of Rights and Retention of Claims by the Local Parties.**

Notwithstanding the waivers and releases described in subsection 9.2, the Local Parties shall retain:

9.7.1 All claims for enforcement of the Settlement Agreement, the Settlement Act, or the Judgment and Decree through such legal and equitable remedies as may be available in any court of competent jurisdiction.

9.7.2 All claims for water rights and injuries to water rights acquired after the Effective Date determined by section 14(a) of the Settlement Act.
9.7.3 All rights not specifically waived and released in this Settlement Agreement.

9.8 Stay of Objections by United States Acting in Its Trust Capacity to any State Engineer of Utah Proposed Determination in the Santa Clara Division of the Virgin River Adjudication.

The water rights of St. George City, Bloomington Canal Company, Ivins Irrigation Company, Lower Gunlock Reservoir Company, New Santa Clara Field Canal Company, Southgate Irrigation Company, St. George Clara Field Canal Company, and Edward Bowler may be confirmed in an order of the Court in the Santa Clara Division of the Virgin River Adjudication prior to the Effective Date as determined by Section 14(a) of the Settlement Act. The United States Acting in Its Trust Capacity is forbearing from asserting at this time, its objections to any claimed water rights in the Santa Clara Division of the Virgin River Adjudication as set forth in any State Engineer of Utah Proposed Determination, in anticipation that implementation of the Settlement Act will declare the water rights of the United States for the benefit of the Shivwits Band vis-a-vis the parties named above as well as other water rights claimants in the Santa Clara Division of the Virgin River Adjudication, and render unnecessary the filing of such objections. Notwithstanding the entry of any Court order declaring the water rights of the parties named above or any other water rights in the Santa Clara Division of the Virgin River Adjudication, the United States Acting in Its Trust Capacity is entitled to assert its objections to the water rights claims of the above named parties as well as any other water rights claimants in the Santa Clara Division of the Virgin River Adjudication on behalf of the Shivwits Band, until the Effective Date as determined by Section 14(a) of the Settlement Act. In furtherance of this subsection 9.8, the State and the United States agree to file periodic stipulations in the Santa Clara Division of the Virgin River Adjudication extending the deadline by which the United States Acting in Its Trust Capacity is required to file objections to any water rights claims in the Santa Clara Division of the Virgin River Adjudication set forth in any Proposed Determination of the State Engineer of Utah.
10.0 RIGHTS OF MEMBERS

10.1 The water rights and other benefits realized by the Shivwits Band under this Agreement shall constitute full and complete satisfaction of all Members’ claims for water rights or injuries to water rights for lands within the Reservation under Federal, State, and other laws, and any other federal reserved water rights claims of Members in the Virgin River System from time immemorial to the Effective Date as determined by Section 14(a) of the Settlement Act.

10.2 Any entitlement to water of any Member for lands within the Reservation shall be satisfied out of the water resources provided in this Agreement and neither the Shivwits Band nor its Members shall have further claims against any Party with respect to a Member’s use of water on land within the Reservation, water rights, or damages for violation of water rights, except as provided in this Agreement.

10.3 Notwithstanding Subsections 10.1 and 10.2, nothing in this Agreement shall be deemed to recognize or establish any right of a Member of the Shivwits Band to water on the Reservation.

11.0 CAPACITIES IN WHICH SETTLEMENT AGREEMENT IS EXECUTED

11.1 This Agreement is executed by the Shivwits Band on behalf of itself and its Members.

11.2 This Agreement is executed by the United States, acting through the Secretary of the Interior as trustee for (a) the Shivwits Reservation, (b) the Shivwits Band, (c) its Members, and (d) the Paiute Indian Tribe of Utah acting on behalf of the Shivwits Band.

11.3 This Agreement is executed by the State of Utah, acting through its Executive Director of the Department of Natural Resources.

12.0 CONTINGENT UPON APPROPRIATION OF FUNDS

The expenditure or advance of any money or the performance of any obligation by the United States under this Agreement shall be contingent upon appropriation of funds therefore. No liability shall accrue to the United States or to any other Party in the event that funds are not
1. Appropriated.

13.0 COUNTERPARTS.

This Agreement may be executed in counterparts, each of which shall be deemed an
original, but all of which together shall constitute one and the same Agreement.

14.0 ENTIRE AGREEMENT.

This Agreement supercedes any prior understanding, representation, or agreement of the
Parties regarding the subject matter hereof.

15.0 EVIDENTIARY EFFECT OF NEGOTIATIONS.

15.1 This Agreement has been arrived at in the process of good faith negotiations for the
purpose of resolving legal disputes, including pending litigation, and all Parties agree that no
offers and/or compromises made in the course thereof shall be construed as admissions against
interest or be used in any legal proceeding other than one for approval, confirmation,
interpretation, or enforcement of this Agreement.

15.2 This Agreement is the result of a voluntary compromise settlement reached among
the Parties. Accordingly, no provision of this Agreement or its adoption as part of any pending
general stream adjudication shall be construed as altering or affecting the determination of any
issues relating to any other reserved water right claims which may belong to other Indian tribes.

16.0 GOVERNING LAW AND RIGHTS AND REMEDIES.

16.1 This Agreement shall be construed in accordance with the applicable law of the State
of Utah and applicable Federal law. Nothing contained herein waives the right of the United
States or the Shivwits Band to object to the jurisdiction of the courts of the State of Utah to
adjudicate any dispute arising under this Agreement, or waives the right of any Party to object to
the jurisdiction of any federal court to adjudicate any dispute arising under this Agreement.

16.2 The Parties shall have all rights and remedies provided under applicable federal or
state law for a breach or threatened breach of this Agreement; provided, however, that because
this Agreement is intended to supply water in perpetuity to the Shivwits Band in lieu of the water

13
rights claims filed by the United States on behalf of the Shivwits Band in the Virgin River

Adjudication, termination of this Agreement for breach of this Agreement is not a permitted or authorized right or remedy under this Agreement. These rights and remedies shall not be mutually exclusive, and the exercise of one or more of these rights and remedies shall not preclude the exercise of any other rights and remedies. Each Party confirms that damages at law may be an inadequate remedy for a breach or threatened breach of any provision hereof and the respective rights and obligations of the Parties hereunder shall be enforceable by specific performance, injunction, or other equitable remedy. Nothing in this Agreement shall be construed to waive the sovereign immunity of the United States.

17.0 MODIFICATION OF AGREEMENT.

Any modification of this Agreement or additional obligation assumed by any Party in connection with this Agreement shall be binding only if evidenced in writing and signed by each Party or an authorized representative of each Party.

18.0 NECESSARY ACTS AND COOPERATION.

18.1 The Parties shall do any act or thing and execute any and all instruments required by this Agreement and which are necessary and proper to make effective the provisions of this Agreement; provided, however, that the United States shall not be required to do any act or thing that is not authorized by law and for which funds have not been appropriated by Congress; and provided, further, that Utah shall not be required to do any act or thing that is not authorized by law and for which funds have not been appropriated by the Utah legislature.

18.2 The Parties shall not protest any applications filed with the State Engineer of Utah in furtherance of or as needed to effectuate the provisions of this Agreement, the St. George Water Reuse Agreement, or the Santa Clara Project Agreement.

18.3 The Parties shall not file any objection or protest to any Proposed Determination(s) that may be issued by the State Engineer of Utah in furtherance of or as needed to effectuate this Agreement, the St. George Water Reuse Agreement, or the Santa Clara Project Agreement.
1 Agreement, except to the extent that such Proposed Determination(s) may be inconsistent with these agreements.

18.4 The Parties shall not file any objection or protest to the Proposed Judgment and Decree (Exhibit D) that is filed by stipulation of the Parties in the Virgin River Adjudication.

18.5 The Parties shall file in the Virgin River Adjudication those documents required to obtain a decree(s), pursuant to Utah Rule of Civil Procedure 54(b), that is final as to all parties to the Santa Clara Division of the Virgin River Adjudication and from which no further appeals may be taken, which confirms the Utah State Engineer’s Proposed Determinations regarding the water rights pooled in accordance with the Santa Clara Project Agreement, the Shivwits Water Rights set forth in this Agreement, and changes all “prior to 1890” water rights set forth in the 1922 adjudication entitled *St. George Santa Clara Field Co., et al. v. Newcastle Reclamation Co., et al.* to “1890” water rights.

18.6 The Parties agree that sufficient mitigation measures or habitat units have already been undertaken by the Virgin River Basin Resource Management and Recovery Program and that such units shall be reserved for approval of the water depletion activities associated with this Agreement, the St. George Water Reuse Agreement, and the Santa Clara Project Agreement.

19.0 NO WAIVER.

No delay or failure by any Party to exercise any right under this Agreement, and no partial or single exercise of that right, shall constitute waiver of that or any other right, unless expressly provided herein. No waiver by a Party under this Agreement shall affect or alter the remainder of this Agreement, and each and every covenant, duty, and condition hereof shall continue in full force and effect with respect to any other then existing or subsequently occurring breach.
NOTICES.

Any notice to be given hereunder shall have been properly given when hand delivered to the officer or manager designated in this Section, or when deposited in the United States mail, certified or registered, postage prepaid, addressed as follows:

SHIVWITS BAND OF THE PAIUTE INDIAN TRIBE OF UTAH

WATER RIGHTS SETTLEMENT ACT

PUBLIC LAW 106-263

114 STAT. 737

AUGUST 18, 2000
One Hundred Sixth Congress
of the
United States of America

AT THE SECOND SESSION

 Begun and held at the City of Washington on Monday, the twenty-fourth day of January, two thousand

An Act

To provide for the settlement of the water rights claims of the Shivwits Band of the Paiute Indian Tribe of Utah, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the “Shivwits Band of the Paiute Indian Tribe of Utah Water Rights Settlement Act”.

SEC. 2. FINDINGS.

Congress finds the following:

(1) It is the official policy of the United States, in keeping with its trust responsibility to Indian tribes, to promote Indian self-determination and economic self-sufficiency, and to settle the water rights claims of Indian tribes to avoid lengthy and costly litigation.

(2) Any meaningful policy of Indian self-determination and economic self-sufficiency requires the development of viable Indian reservation economies.

(3) The quantification of water rights and the development of water use facilities is essential to the development of viable Indian reservation economies, particularly in the arid Western States.

(4) The Act of March 3, 1891, provided for the temporary support of the Shebit (or Shivwits) tribe of Indians in Washington County, Utah, and appropriated moneys for the purchase of improvements on lands along the Santa Clara River for the use of said Indians. Approximately 26,880 acres in the same area were set aside as a reservation for the Shivwits Band by Executive order dated April 21, 1916. Additional lands were added to the reservation by Congress on May 28, 1937.

(5) The waters of the Santa Clara River are fully appropriated except during high flow periods. A water right was awarded to the United States for the benefit of the Shivwits Band in the 1922 adjudication entitled St. George Santa Clara Field Co., et al. v. Newcastle Reclamation Co., et al., for “1.38 cubic feet of water per second for the irrigation of 83.2 acres of land and for culinary, domestic, and stock watering purposes”, but no provision has been made for water resource development to benefit the Shivwits Band. In general, the remainder of the Santa Clara River's flow is either diverted on the reservation and delivered through a canal devoted exclusively to non-Indian use that traverses the reservation to a reservoir owned by the Ivins Irrigation Company; dedicated
to decreed and certificated rights of irrigation companies down-stream of the reservation; or impounded in the Gunlock Reservoir upstream of the reservation. The Band’s lack of access to water has frustrated its efforts to achieve meaningful self-determination and economic self-sufficiency.

(6) On July 21, 1980, the State of Utah, pursuant to title 73, chapter 4, Utah Code Ann., initiated a statutory adjudication of water rights in the Fifth Judicial District Court in Washington County, Utah, Civil No. 800507596, which encompasses all of the rights to the use of water, both surface and underground, within the drainage area of the Virgin River and its tributaries in Utah ("Virgin River Adjudication"), including the Santa Clara River Drainage ("Santa Clara System").

(7) The United States was joined as a party in the Virgin River Adjudication pursuant to section 666 of title 43, United States Code. On February 17, 1987, the United States filed a Statement of Water User Claim asserting a water right based on State law and a Federal reserved water rights claim for the benefit of the Shivwits Band to water from the Santa Clara River System. This was the only claim the United States filed for any Indian tribe or band in the Virgin River Adjudication within the period allowed by title 73, chapter 4, Utah Code Ann., which bars the filing of claims after the time prescribed therein.

(8) The Virgin River adjudication will take many years to conclude, entail great expense, and prolong uncertainty as to the availability of water supplies, and thus, the parties have sought to settle their dispute over water and reduce the burdens of litigation.

(9) After lengthy negotiation, which included participation by representatives of the United States Government for the benefit of the Shivwits Band, the State of Utah, the Shivwits Band, the Washington County Water Conservancy District, the City of St. George, and others on the Santa Clara River System, the parties have entered into agreements to resolve all water rights claims between and among themselves and to quantify the water right entitlement of the Shivwits Band, and to provide for the construction of water projects to facilitate the settlement of these claims.

(10) Pursuant to the St. George Water Reuse Project Agreement, the Santa Clara Project Agreement, and the Settlement Agreement, the Shivwits Band will receive the right to a total of 4,000 acre-feet of water annually in settlement of its existing State law claims and Federal reserved water right claims.

(11) To advance the goals of Federal Indian policy and consistent with the trust responsibility of the United States to the Shivwits Band, it is appropriate that the United States participate in the implementation of the St. George Water Reuse Project Agreement, the Santa Clara Project Agreement, and the Settlement Agreement in accordance with this Act.

SEC. 3. PURPOSES.

The purposes of this Act are—

(1) to achieve a fair, equitable, and final settlement of all claims to water rights in the Santa Clara River for the
Shivwits Band, and the United States for the benefit of the Shivwits Band;
(2) to promote the self-determination and economic self-sufficiency of the Shivwits Band, in part by providing funds to the Shivwits Band for its use in developing a viable reservation economy;
(3) to approve, ratify, and confirm the St. George Water Reuse Project Agreement, the Santa Clara Project Agreement, and the Settlement Agreement, and the Shivwits Water Right described therein;
(4) to authorize the Secretary of the Interior to execute the St. George Water Reuse Project Agreement, the Santa Clara Project Agreement, and the Settlement Agreement, and to take such actions as are necessary to implement these agreements in a manner consistent with this Act; and
(5) to authorize the appropriation of funds necessary for implementation of the St. George Water Reuse Project Agreement, the Santa Clara Project Agreement, and the Settlement Agreement.

SEC. 4. DEFINITIONS.
In this Act:
(1) SECRETARY.—The term “Secretary” means the Secretary of the Interior.
(2) UTAH.—The term “Utah” means the State of Utah, by and through its Department of Natural Resources.
(5) DISTRICT.—The term “District” means the Washington County Water Conservancy District, a Utah water conservancy district.
(6) ST. GEORGE.—The term “St. George” means St. George City, a Utah municipal corporation.
(7) VIRGIN RIVER ADJUDICATION.—The term “Virgin River Adjudication” means the statutory adjudication of water rights initiated pursuant to title 73, chapter 4, Utah Code Ann. and pending in the Fifth Judicial District Court in Washington County, Utah, Civil No. 800507596.
(8) ST. GEORGE WATER REUSE PROJECT AGREEMENT.—The term “St. George Water Reuse Project Agreement” means the agreement among the United States for the benefit of the Shivwits Band, Utah, the Shivwits Band, and St. George City, together with all exhibits thereto, as the same is approved and executed by the Secretary of the Interior pursuant to section 8 of this Act.
(9) SANTA CLARA PROJECT AGREEMENT.—The term “Santa Clara Project Agreement” means the agreement among the United States for the benefit of the Shivwits Band, Utah, the Shivwits Band, the Washington County Water Conservancy District, St. George City, the New Santa Clara Field Canal Company, the St. George Clara Field Canal Company, the Ivins Irrigation Company, the Southgate Irrigation Company, Bloomington Irrigation Company, Ed Bowler, and the Lower Gunlock Reservoir Company, together with all exhibits thereto, as the same is approved and executed by the Secretary of the Interior pursuant to section 8 of this Act.

(10) SETTLEMENT AGREEMENT.—The term “Settlement Agreement” means that agreement among the United States for the benefit of the Shivwits Band, Utah, the Shivwits Band, the Washington County Water Conservancy District, St. George City, the New Santa Clara Field Canal Company, the St. George Clara Field Canal Company, the Ivins Irrigation Company, the Southgate Irrigation Company, Bloomington Irrigation Company, Ed Bowler, and the Lower Gunlock Reservoir Company, together with all exhibits thereto, as the same is approved and executed by the Secretary of the Interior pursuant to section 8 of this Act.

(11) SHIVWITS WATER RIGHT.—The term “Shivwits Water Right” means the water rights of the Shivwits Band set forth in the Settlement Agreement and as settled, confirmed, and ratified by section 7 of this Act.

(12) SHIVWITS BAND TRUST FUND.—The term “Shivwits Band Trust Fund” means the Trust Fund authorized in section 11 of this Act to further the purposes of the Settlement Agreement and this Act.

(13) VIRGIN RIVER RESOURCE MANAGEMENT AND RECOVERY PROGRAM.—The term “Virgin River Resource Management and Recovery Program” means the proposed multiagency program, to be administered by the United States Fish and Wildlife Service, Bureau of Land Management, National Park Service, Utah, and the District, whose primary purpose is to prioritize and implement native fish recovery actions that offset impacts due to future water development in the Virgin River basin.

SEC. 5. ST. GEORGE WATER REUSE PROJECT.

(a) ST. GEORGE WATER REUSE PROJECT.—The St. George Water Reuse Project shall consist of water treatment facilities, a pipeline, and associated pumping and delivery facilities owned and operated by St. George, which is a component of, and shall divert water from, the Water Reclamation Facility located in St. George, Utah, and shall transport this water for delivery to and use by St. George and the Shivwits Band. St. George shall make 2,000 acre-feet of water available annually for use by the Shivwits Band in accordance with the St. George Water Reuse Project Agreement and this Act.

(b) PROJECT CONSTRUCTION OPERATION AND MAINTENANCE.—

(1) St. George shall be responsible for the design, engineering, permitting, construction, operation, maintenance, repair, and replacement of the St. George Water Reuse Project, and the payment of its proportionate share of these project costs as provided for in the St. George Water Reuse Project Agreement.
(2) The Shivwits Band and the United States for the benefit of the Shivwits Band shall make available, in accordance with the terms of the St. George Water Reuse Agreement and this Act, a total of $15,000,000 to St. George for the proportionate share of the design, engineering, permitting, construction, operation, maintenance, repair, and replacement of the St. George Water Reuse Project associated with the 2,000 acre-feet annually to be provided to the Shivwits Band.

SEC. 6. SANTA CLARA PROJECT.

(a) SANTA CLARA PROJECT.—The Santa Clara Project shall consist of a pressurized pipeline from the existing Gunlock Reservoir across the Shivwits Reservation to and including Ivins Reservoir, along with main lateral pipelines. The Santa Clara Project shall pool and deliver the water rights of the parties as set forth in the Santa Clara Project Agreement. The Santa Clara Project shall deliver to the Shivwits Band a total of 1,900 acre-feet annually in accordance with the Santa Clara Project Agreement and this Act.

(b) IN STREAM FLOW.—The Santa Clara Project shall release instream flow water from the Gunlock Reservoir into the Santa Clara River for the benefit of the Virgin Spinedace, in accordance with the Santa Clara Project Agreement and this Act.

(c) PROJECT FUNDING.—The Utah Legislature and the United States Congress have each appropriated grants of $750,000 for the construction of the Santa Clara Project. The District shall provide a grant of $750,000 for the construction of the Santa Clara Project. The District shall provide any additional funding required for the construction of the Santa Clara Project.

(d) PROJECT CONSTRUCTION, OPERATION, AND MAINTENANCE.—The District shall be responsible for the permitting, design, engineering, construction, and the initial operation, maintenance, repair, and replacement of the Santa Clara Project. Operation, maintenance, repair, and replacement activities and costs of the Santa Clara Project shall be handled in accordance with the terms of the Santa Clara Project Agreement.

SEC. 7. SHIVWITS WATER RIGHT.

(a) IN GENERAL.—The Shivwits Band and its members shall have the right in perpetuity to divert, pump, impound, use, and reuse a total of 4,000 acre-feet of water annually from the Virgin River and Santa Clara River systems, to be taken as follows:

(1) 1,900 acre-feet annually from the Santa Clara River System, with an 1890 priority date in accordance with the terms of the Santa Clara Project Agreement.

(2) 2,000 acre-feet of water annually from the St. George Water Reuse Project as provided for in the St. George Water Reuse Project Agreement. The Shivwits Band shall have first priority to the reuse water provided from the St. George Water Reclamation Facility.

(3) 100 acre-feet annually, with a 1916 priority date, from groundwater on the Shivwits Reservation.

(b) WATER RIGHTS CLAIMS.—All water rights claims of the Shivwits Band, and the Paiute Indian Tribe of Utah acting on behalf of the Shivwits Band, are hereby settled. The Shivwits Water Right is hereby ratified, confirmed, and shall be held in trust by the United States for the benefit of the Shivwits Band.
(c) Settlemen——The Shivwits Band may use water from the springs and runoff located on the Shivwits Reservation. The amount used from these sources will be reported annually to the Utah State Engineer by the Shivwits Band and shall be counted against the annual 4,000 acre-feet Shivwits Water Right.

(d) Abandonment, Forfeiture, or Nonuse.—The Shivwits Water Right shall not be subject to loss by abandonment, forfeiture, or nonuse.

(e) Use or Lease.—The Shivwits Band may use or lease the Shivwits Water Right for either or both of the following:

1. For any purpose permitted by tribal or Federal law anywhere on the Shivwits Band Reservation. Once the water is delivered to the Reservation, such use shall not be subject to State law, regulation, or jurisdiction.

2. For any beneficial use off the Shivwits Reservation in accordance with the St. George Water Reuse Agreement, the Santa Clara Project Agreement, the Settlement Agreement, and all applicable Federal and State laws.

No service contract, lease, exchange, or other agreement entered into under this subsection may permanently alienate any portion of the Shivwits Water Right.

Sec. 8. Ratification of Agreements.

Except to the extent that the St. George Water Reuse Project Agreement, the Santa Clara Project Agreement, and the Settlement Agreement conflict with the provisions of this Act, such agreements are hereby approved, ratified, and confirmed. The Secretary is hereby authorized to execute, and take such other actions as are necessary to implement, such agreements.

Sec. 9. Satisfaction of Claims.

(a) Full Satisfaction of Claims.—The benefits realized by the Shivwits Band and its members under the St. George Water Reuse Project Agreement, the Santa Clara Project Agreement, the Settlement Agreement, and this Act shall constitute full and complete satisfaction of all water rights claims, and any continuation thereafter of any of these claims, of the Shivwits Band and its members, and the Paiute Indian Tribe of Utah acting on behalf of the Shivwits Band, for water rights or injuries to water rights under Federal and State laws from time immemorial to the effective date of this Act. Notwithstanding the foregoing, nothing in this Act shall be—

1. Deemed to recognize or establish any right of a member of the Shivwits Band to water on the Shivwits Reservation; or

2. Interpreted or construed to prevent or prohibit the Shivwits Band from participating in the future in other water projects, or from purchasing additional water rights for their benefit and use, to the same extent as any other entity.

(b) Waiver and Release.—By the approval, ratification, and confirmation herein of the St. George Water Reuse Project Agreement, the Santa Clara Project Agreement, and the Settlement Agreement, the United States executes the following waiver and release in conjunction with the Reservation of Rights and Retention of Claims set forth in the Settlement Agreement, to be effective upon satisfaction of the conditions set forth in section 14 of this Act. Except as otherwise provided in the Settlement Agreement, this Act, or the proposed judgment and decree referred to in section
14(a)(7) of this Act, the United States, on behalf of the Shivwits Band and the Paiute Indian Tribe of Utah acting on behalf of the Shivwits Band, waives and releases the following:

(1) All claims for water rights or injuries to water rights for lands within the Shivwits Reservation that accrued at any time up to and including the effective date determined by section 14 of this Act, and any continuation thereafter of any of these claims, that the United States for the benefit of the Shivwits Band may have against Utah, any agency or political subdivision thereof, or any person, entity, corporation, or municipal corporation.

(2) All claims for water rights or injuries to water rights for lands outside of the Shivwits Reservation, where such claims are based on aboriginal occupancy of the Shivwits Band, its members, or their predecessors, that accrued at any time up to and including the effective date determined by section 14 of this Act, and any continuation thereafter of any of these claims, that the United States for the benefit of the Shivwits Band may have against Utah, any agency or political subdivision thereof, or any person, entity, corporation, or municipal corporation.

(3) All claims for trespass to lands on the Shivwits Reservation regarding the use of Ivins Reservoir that accrued at any time up to and including the effective date determined by section 14 of this Act.

(c) DEFINITIONS.—For purposes of this section—

(1) “water rights” means rights under State and Federal law to divert, pump, impound, use or reuse, or to permit others to divert, pump, impound, use or reuse water; and

(2) “injuries to water rights” means the loss, deprivation, or diminution of water rights.

(d) SAVINGS PROVISION.—In the event the waiver and release contained in subsection (b) of this section do not become effective pursuant to section 14, the Shivwits Band and the United States shall retain the right to assert past and future water rights claims as to all lands of the Shivwits Reservation, and the water rights claims and defenses of all other parties to the agreements shall also be retained.

SEC. 10. WATER RIGHTS AND HABITAT ACQUISITION PROGRAM.

(a) IN GENERAL.—The Secretary is authorized to establish a water rights and habitat acquisition program in the Virgin River Basin—

(1) primarily for the benefit of native plant and animal species in the Santa Clara River Basin which have been listed, are likely to be listed, or are the subject of a duly approved conservation agreement under the Endangered Species Act; and

(2) secondarily for the benefit of native plant and animal species in other parts of the Virgin River Basin which have been listed, are likely to be listed, or are the subject of a duly approved conservation agreement under the Endangered Species Act.

(b) WATER AND WATER RIGHTS.—The Secretary is authorized to acquire water and water rights, with or without the lands to which such rights are appurtenant, and to acquire shares in irrigation and water companies, and to transfer, hold, and exercise such
H.R. 3291—8

water and water rights and related interests to assist the conservation and recovery of any native plant or animal species described in subsection (a).

(c) Requirements.—Acquisition of the water rights and related interests pursuant to this section shall be subject to the following requirements:

(1) Water rights acquired must satisfy eligibility criteria adopted by the Secretary.

(2) Water right purchases shall be only from willing sellers, but the Secretary may target purchases in areas deemed by the Secretary to be most beneficial to the water rights acquisition program established by this section.

(3) All water rights shall be transferred and administered in accordance with any applicable State law.

(d) Habitat Property.—The Secretary is authorized to acquire, hold, and transfer habitat property to assist the conservation and recovery of any native plant or animal species described in section 10(a). Acquisition of habitat property pursuant to this section shall be subject to the following requirements:

(1) Habitat property acquired must satisfy eligibility criteria adopted by the Secretary.

(2) Habitat property purchases shall be only from willing sellers, but the Secretary may target purchases in areas deemed by the Secretary to be most beneficial to the habitat acquisition program established by this section.

(e) Contract.—The Secretary is authorized to administer the water rights and habitat acquisition program by contract or agreement with a non-Federal entity which the Secretary determines to be qualified to administer such program. The water rights and habitat acquisition program shall be administered pursuant to the Virgin River Resource Management and Recovery Program.

(f) Authorization.—There is authorized to be appropriated from the Land and Water Conservation Fund for fiscal years prior to the fiscal year 2004, a total of $3,000,000 for the water rights and habitat acquisition program authorized in this section. The Secretary is authorized to deposit and maintain this appropriation in an interest bearing account, said interest to be used for the purposes of this section. The funds authorized to be appropriated by this section shall not be in lieu of or supersede any other commitments by Federal, State, or local agencies. The funds appropriated pursuant to this section shall be available until expended, and shall not be expended for the purpose set forth in subsection (a)(2) until the Secretary has evaluated the effectiveness of the instream flow required and provided by the Santa Clara Project Agreement, and has assured that the appropriations authorized in this section are first made available for the purpose set forth in subsection (a)(1).

SEC. II. SHIVWITS BAND TRUST FUND.

(a) Establishment of Trust Fund.—There is established in the Treasury of the United States a fund to be known as the “Shivwits Band Trust Fund” (hereinafter called the “Trust Fund”). The Secretary shall deposit into the Trust Fund the funds authorized to be appropriated in subsections (b) and (c). Except as otherwise provided in this Act, the Trust Fund principal and any income accruing thereon shall be managed in accordance with the American

(b) AUTHORIZATION.—There is authorized to be appropriated a total of $20,000,000, for fiscal years prior to the fiscal year 2004 for the following purposes:

(1) $5,000,000, which shall be made available to the Shivwits Band from the Trust Fund for purposes including but not limited to those that would enable the Shivwits Band to put to beneficial use all or part of the Shivwits Water Right, to defray the costs of any water development project in which the Shivwits Band is participating, or to undertake any other activity that may be necessary or desired for implementation of the St. George Water Reuse Project Agreement, the Santa Clara Project Agreement, the Settlement Agreement, or for economic development on the Shivwits Reservation.

(2) $15,000,000, which shall be made available by the Secretary and the Shivwits Band to St. George for the St. George Water Reuse Project, in accordance with the St. George Water Reuse Project Agreement.

(c) SHARE OF CERTAIN COSTS.—There is authorized to be appropriated to the Trust Fund in fiscal years prior to the fiscal year 2004 a total of $1,000,000 to assist with the Shivwits Band's proportionate share of operation, maintenance, repair, and replacement costs of the Santa Clara Project as provided for in the Santa Clara Project Agreement.

(d) USE OF THE TRUST FUND.—Except for the $15,000,000 appropriated pursuant to subsection (b)(2), all Trust Fund principal and income accruing thereon may be used by the Shivwits Band for the purposes described in subsections (b)(1) and (c). The Shivwits Band, with the approval of the Secretary, may withdraw the Trust Fund and deposit it in a mutually agreed upon private financial institution. That withdrawal shall be made pursuant to the American Indian Trust Fund Management Reform Act of 1994 (25 U.S.C. 4001 et seq.). If the Shivwits Band exercises its right pursuant to this subsection to withdraw the Trust Fund and deposit it in a private financial institution, except as provided in the withdrawal plan, neither the Secretary nor the Secretary of the Treasury shall retain any oversight over or liability for the accounting, disbursement, or investment of the funds.

(e) NO PER CAPITA PAYMENTS.—No part of the principal of the Trust Fund, or of the income accruing thereon, or of any revenue generated from any water use subcontract, shall be distributed to any member of the Shivwits Band on a per capita basis.

(f) LIMITATION.—The moneys authorized to be appropriated under subsections (b) and (c) shall not be available for expenditure or withdrawal by the Shivwits Band until the requirements of section 14 have been met so that the decree has become final and the waivers and releases executed pursuant to section 9(b) have become effective. Once the settlement becomes effective pursuant to the terms of section 14 of this Act, the assets of the Trust Fund belong to the Shivwits Band and are not returnable to the United States Government.

SEC. 12. ENVIRONMENTAL COMPLIANCE.

(a) NATIONAL ENVIRONMENTAL POLICY ACT.—Signing by the Secretary of the St. George Water Reuse Project Agreement, the
H. R. 3291—10

Santa Clara Project Agreement, or the Settlement Agreement does not constitute major Federal action under the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.).

(b) OTHER REQUIREMENTS.—The Secretary shall comply with all aspects of the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.), and other applicable environmental laws in implementing the terms of the St. George Water Reuse Agreement, the Santa Clara Project Agreement, the Settlement Agreement, and this Act.

SEC. 13. MISCELLANEOUS PROVISIONS.

(a) OTHER INDIAN TRIBES.—Nothing in the Settlement Agreement or this Act shall be construed in any way to quantify or otherwise adversely affect the land and water rights, claims, or entitlements to water of any Indian tribe, pueblo, or community, other than the Shivwits Band and the Paiute Indian Tribe of Utah acting on behalf of the Shivwits Band.

(b) PRECEDENT.—Nothing in this Act shall be construed or interpreted as a precedent for the litigation of reserved water rights or the interpretation or administration of future water settlement Acts.

(c) WAIVER OF SOVEREIGN IMMUNITY.—Except to the extent provided in subsections (a), (b), and (c) of section 208 of the Department of Justice Appropriation Act, 1953 (43 U.S.C. 666), nothing in this Act may be construed to waive the sovereign immunity of the United States. Furthermore, the submission of any portion of the Settlement Agreement to the District Court in the Virgin River Adjudication shall not expand State court jurisdiction or expand in any manner the waiver of sovereign immunity of the United States in section 666 of title 43, United States Code, or any other provision of Federal law.

(d) APPRAISALS.—Notwithstanding any other law to the contrary, the Secretary is authorized to approve any right-of-way appraisal which has been completed in accordance with the provisions of the Santa Clara Project Agreement.

SEC. 14. EFFECTIVE DATE.

(a) IN GENERAL.—The waiver and release contained in section 9(b) of this Act shall become effective as of the date the Secretary causes to be published in the Federal Register a statement of findings that—

1. the funds authorized by sections 11(b) and 11(c) have been appropriated and deposited into the Trust Fund;
2. the funds authorized by section 10(f) have been appropriated;
3. the St. George Water Reuse Project Agreement has been modified to the extent it is in conflict with this Act and is effective and enforceable according to its terms;
4. the Santa Clara Project Agreement has been modified to the extent it is in conflict with this Act and is effective and enforceable according to its terms;
5. the Settlement Agreement has been modified to the extent it is in conflict with this Act and is effective and enforceable according to its terms;
6. the State Engineer of Utah has taken all actions and approved all applications necessary to implement the provisions of the St. George Water Reuse Agreement, the Santa Clara
Project Agreement, and the Settlement Agreement, from which no further appeals may be taken; and

(7) the court has entered a judgment and decree confirming the Shivwits Water Right in the Virgin River Adjudication pursuant to Utah Rule of Civil Procedure 54(b), that confirms the Shivwits Water Right and is final as to all parties to the Santa Clara Division of the Virgin River Adjudication and from which no further appeals may be taken, which the United States and Utah find is consistent in all material aspects with the Settlement Agreement and with the proposed judgment and decree agreed to by the parties to the Settlement Agreement.

(b) DEADLINE.—If the requirements of paragraphs (1) through (7) of subsection (a) are not completed to allow the Secretary’s statement of findings to be published by December 31, 2003—

(1) except as provided in section 9(d), this Act shall be of no further force and effect; and

(2) all unexpended funds appropriated under section 11(b) and (c), together with all interest earned on such funds shall revert to the general fund of the United States Treasury on October 1, 2004.

Speaker of the House of Representatives.

Vice President of the United States and President of the Senate.

EXHIBITS

EXHIBIT A - SANTA CLARA PROJECT DESCRIPTION
EXHIBIT B - MAP OF SHIWITS INDIAN RESERVATION
EXHIBIT C - TABULATION OF SANTA CLARA PROJECT WATER RIGHTS
EXHIBIT D - MAP OF IVINS RESERVOIR EASEMENT
EXHIBIT E - CONSERVATION AGREEMENT AND STRATEGY
EXHIBIT F - AGREEMENT AMONG UTAH DIVISION OF WILDLIFE RESOURCES, WCWCD, AND LOWER GUNLOCK
This Agreement is made and entered into on __________, 2001, by and among the
Bloomington Canal Company; Edward Bowler, a shareholder in the Gunlock Irrigation Company;
Ivins Irrigation Company; the Lower Gunlock Reservoir Corporation; the New Santa Clara Field
Canal Company; the Shivwits Band of the Paiute Indian Tribe of Utah; the Southgate Irrigation
Company; the City of St. George, Utah; the St. George Clara Field Canal Company; the United
States of America; the State of Utah; and the Washington County Water Conservancy District.

1.0 Recitals.

1.1 On July 21, 1980, the State of Utah, pursuant to Title 73, Chapter 4, Utah Code as
amended, initiated a statutory adjudication of water rights in the Fifth Judicial District Court of
the State of Utah in and for Washington County, Civil No. 800507596, which encompasses all of
the rights to the use of water, both surface and underground, within the drainage area of the
Virgin River and its tributaries in Utah ("Virgin River Adjudication"), including the Santa Clara
Drainage ("Santa Clara System").

1.2 The United States of America was joined as a party in the Virgin River Adjudication
pursuant to 43 USC § 666. On February 17, 1987, the United States filed a Statement of Water
Users Claim asserting a water right based on state law and a federal reserved water rights claim
for the benefit of the Shivwits Band of the Paiute Indian Tribe of Utah.

1.3 The Santa Clara System is subject to erratic flows and in most years does not supply
sufficient water to satisfy all existing water rights, and the annual flow of the Santa Clara System
is characterized by either low flows or extremely high flows with very few average water years.

1.4 To assist in stabilizing the water supply from the Santa Clara System, the Parties
have studied the feasibility of pooling the water rights of the Parties and have determined that it is
in their mutual interests to construct a pressurized pipeline from the Gunlock Reservoir to the
lower Santa Clara River along with main lateral pipelines, which would result in the delivery of
water as provided for herein, improve the efficiency of water delivery, conserve water, and help
alleviate current water shortages in the Santa Clara System.

1.5 The Parties intend to provide instream flow water from the Gunlock Reservoir to the lower Santa Clara River for the benefit of the Virgin Spinedace.

1.6 To remove causes of present and future controversy over the waters of the Santa Clara System without further litigation, the Parties hereto have conducted extensive negotiations regarding the settlement of the water rights claims of the Shivwits Band of the Paiute Indian Tribe of Utah and the United States of America for the benefit of the Shivwits Band of the Paiute Indian Tribe of Utah.

AGREEMENT

NOW, THEREFORE, the Parties agree as follows:

2.0 Parties.

2.1 Bloomington Canal Company ("Bloomington") is a Utah nonprofit corporation, and is a member of the Board of Trustees of Lower Gunlock.

2.2 Edward Bowler is an individual who owns shares in the Gunlock Irrigation Company.

2.3 Ivins Irrigation Company ("Ivins Irrigation") is a Utah nonprofit corporation, which currently has approximately 3% of its shares owned by WCWCD.

2.4 Lower Gunlock Reservoir Corporation ("Lower Gunlock") is a Utah nonprofit corporation, the storage rights of which are part of the Santa Clara Project Water Right pursuant to subsection 4.2, which is responsible for the operation and maintenance of Gunlock Reservoir including the Conservation Pool, and has as members of its Board of Trustees representatives appointed by Bloomington, New Santa Clara, St. George Clara, St. George, and Southgate.

2.5 New Santa Clara Field Canal Company ("New Santa Clara") is a Utah nonprofit corporation and is a member of the Board of Trustees of Lower Gunlock.

2.6 Shivwits Band of the Paiute Indian Tribe of Utah ("Shivwits Band") is one of five constituent bands of the Paiute Indian Tribe of Utah.
2.7 Southgate Irrigation Company ("Southgate") is a Utah nonprofit corporation, formerly known as the Santa Clara Seep Ditch Company, which currently has approximately 77.6% of its shares owned and controlled by St. George and is a member of the Board of Trustees of Lower Gunlock.

2.8 City of St. George ("St. George") is a Utah municipal corporation which currently owns approximately 77.6% of the shares in the Southgate, owns approximately 38% of the shares in the St. George Clara Field Canal Company, and has five (5) representatives on the Board of Trustees of Lower Gunlock.

2.9 St. George Clara Field Canal Company ("St. George Clara") is a Utah nonprofit corporation which has approximately 38% of its shares owned by the City of St. George, Utah, and approximately 3% of its shares owned by WCWCD, and is a member of the Board of Trustees of Lower Gunlock.

2.10 United States of America ("United States"), acting by and through the Secretary of the Interior.

2.11 State of Utah ("Utah"), acting by and through its Department of Natural Resources.

2.12 Washington County Water Conservancy District ("WCWCD") is a Utah water conservancy district which owns approximately 3% of Ivins Irrigation and approximately 3% of St. George Clara.

3.0 Definitions.

3.1 "Average Water Year" means when the April 1 forecasted Santa Clara River stream flow for the period of April 1 through July 31, at Santa Clara River near Pine Valley U.S. Geological Survey Gage, as forecasted by the National Weather Service's Colorado River Basin Center, plus the storage in Gunlock Reservoir on April 1, meets or exceeds 12,500 acre-feet.

3.2 "Below Average Water Year" means when the April 1 forecasted Santa Clara River stream flow for the period of April 1 through July 31, at the Santa Clara River near Pine Valley U.S. Geological Survey Gage, as forecasted by the National Weather Service's Colorado River Basin Center, plus the storage in Gunlock Reservoir on April 1, is less than 12,500 acre-feet.
3.3 "Conservation Pool" means the 2,100 acre-feet of storage capacity above the Sediment Pool in Gunlock Reservoir.

3.4 "Gunlock Well Field" means that portion of the Navajo and Kayenta aquifers located adjacent to the Santa Clara River and south of Gunlock Reservoir and extending downstream to the saturated limit of the Navajo Sandstone Formation in T41S,R17W,SLB&M.

3.5 "Proposed Determination" means the Proposed Determination of Water Rights, Santa Clara River-Beaver Dam Wash Division, Book No. 1, issued by the State Engineer of Utah dated July 6, 1989, as amended.

3.6 "River Commissioner" means the Santa Clara River Water Commissioner, duly appointed by the State Engineer of Utah after consultation with the affected water users, who is charged with the responsibility of measuring, distributing and reporting the water deliveries on the Santa Clara River System, pursuant to Section 73-5-1 of the Utah Code Annotated.

3.7 "Santa Clara Project" means the pressurized pipeline from the Gunlock Reservoir across the Shivwits Indian Reservation to and including Ivins Reservoir, which will be used to deliver water to the Parties in accordance with this Agreement, and which is more fully described in Exhibit A attached hereto and incorporated by reference.

3.8 "Santa Clara Water Delivery Year" means the period starting on April 1 and ending on March 31 of the next calendar year.

3.9 "Sediment Pool" means the first 1,500 acre-feet of storage capacity in Gunlock Reservoir.

3.10 "Settlement Agreement" means the Shivwits Band of the Paiute Indian Tribe of Utah Water Rights Settlement Agreement executed by Bloomington, Edward Bowler, Ivins Irrigation, Lower Gunlock, New Santa Clara, the Shivwits Band, St. George, St. George Clara, Southgate, Utah, United States, and the WCWCD, and which is ratified and confirmed by Congress in legislation to settle comprehensively the water rights claims of the Shivwits Band in the Virgin River Adjudication.

3.11 "Shivwits Band Trust Fund" means the trust fund authorized by the Congress of
the United States in legislation to ratify and confirm this Agreement, to be established in the
Treasury of the United States for the benefit of the Shivwits Band.

3.12 "Shivwits Santa Clara Water Right" means the water right confirmed to the
Shivwits Band pursuant to this Agreement, as described more fully in Section 5.0.

3.13 "Shivwits Reservation" means the federal reservation of land in Washington
County, Utah, which is held in trust by the United States for the benefit of the Shivwits Band of
the Paiute Indian Tribe of Utah, as described in Exhibit B incorporated by reference herein, and
shall include any future trust acquisitions contiguous to the Shivwits Reservation.

3.14 "Supplemental Project Water" means all groundwater rights of Ivins Irrigation,
New Santa Clara, and St. George Clara, in addition to the 4 cfs to be supplied from the Gunlock
Well Field.

3.15 "Virgin River Adjudication" means the statutory adjudication of water rights in the
Fifth Judicial District Court of the State of Utah in and for Washington County, Civil No.
800507596.

4.0 Santa Clara Project.

4.1 Santa Clara Project. The Parties agree to the construction of the Santa Clara Project
for the delivery of untreated water to the Parties and in the quantities set forth in Section 8.0 of
this Agreement and to provide the release of instream flow water in the Santa Clara River
downstream of Gunlock Reservoir. The Parties intend that the construction of, and the delivery
of water through, the Santa Clara Project pipeline will result in a water savings and that this water
savings is a part of the water the Parties agree shall be pooled in accordance with Subsection 4.2
of this Agreement and used to satisfy the water deliveries set forth in Section 8.0 of this
Agreement.

4.2 Santa Clara Project Water Rights. The surface, groundwater, and storage rights of
New Santa Clara, St. George Clara, Ivins Irrigation, the United States for the benefit of the
Shivwits Band, St. George, and Lower Gunlock, as identified in Exhibit C - Tabulation of Water
Rights To Be Pooled Under the Santa Clara Project Agreement, and the water conserved through
construction of the Santa Clara Project pipeline, shall be pooled and each of the Parties pooling
their water rights shall receive deliveries of water in accordance with the water delivery schedule
provided for in Section 8.0 herein. The water rights of the Parties identified in this subsection
4.2, and the water rights of the Shivwits Band set forth in subsection 5.1 of this Agreement, shall
be the subject of Proposed Determinations, and of a judgment and decree in the Virgin River
Adjudication.

4.3 The groundwater rights pooled in accordance with Subsection 4.2 of this Agreement,
and the groundwater rights of St. George described in Subsection 10.2 of this Agreement, shall be
considered Supplemental Project Water, and shall be used to satisfy the Santa Clara Project Water
Rights as provided for in Subsection 8.5 of this Agreement.

5.0 Shivwits Santa Clara Water Right

5.1 Contingent upon satisfaction of the actions identified in Section 11.0 of this
Agreement, and Section 9.0 (Waivers and Release of Claims) of the Settlement Agreement, the
Shivwits Band, and the United States acting on behalf of the Shivwits Band, shall be entitled in
perpetuity to a total of 1,900 acre feet annually, with an 1890 priority date, from the Santa Clara
System, to be provided by the Santa Clara Project in Average Water Years; provided, however,
that the Shivwits Band shall have a proportionate reduction in water deliveries from the Santa
Clara Project equivalent to all other Parties to this Agreement with an 1890 priority date in a
Below Average Water Year, as provided in Subsection 8.4 of this Agreement. The 1,900 acre
feet annually provided for herein shall include the 500.60 acre feet of water under Water Right
Nos. 81-2313 and 81-2425 specified in the Proposed Determination at Pages 199-200.

5.2 The Shivwits Band may use and lease the Shivwits Santa Clara Water Right:

5.2.1 for any purpose permitted by Tribal or Federal law anywhere on the
Shivwits Reservation and such use shall not be subject to State or local law, regulation or
jurisdiction once the water is delivered to the Shivwits Reservation, and

5.2.2 for any beneficial use off the Shivwits Reservation in accordance with all
applicable federal and State laws.
5.3 In any evaluation of a change application filed on the Shivwits Santa Clara Water Right, the State Engineer of Utah shall assume that the water is being used on the Shivwits Reservation at a 60% consumption rate.

5.4 The Shivwits Santa Clara Water Right shall not be subject to loss by abandonment, forfeiture, or non-use whether used on or off the Shivwits Reservation.

6.0 Santa Clara Project Construction.

6.1 WCWCD shall be solely responsible for the design, permitting, engineering and construction of the Santa Clara Project.

6.2 Payment of Project Costs. As of the date this Agreement was executed, the following financial contributions have been made in the form of grants to or by WCWCD to develop and construct the Santa Clara Project: (a) a grant of $750,000.00 from Utah; (b) a grant of $750,000.00 from the U.S. Fish and Wildlife Service; (c) a grant of $35,000 from the U.S. Bureau of Land Management; and (d) a grant of $750,000.00 by WCWCD. The WCWCD agrees that it shall provide the funding for the development and construction of the Santa Clara Project in excess of any funds required beyond the grant funds described in this subparagraph.

6.3 The Parties agree that based upon the contributions and grants of the federal funds described in Subsection 6.2, the Shivwits Band and the United States shall have no obligation for the construction costs necessary for the delivery of the Shivwits Santa Clara Water Right in accordance with this Agreement.

6.4 Santa Clara Project Land and Easements.

6.4.1 All Parties, with the exception of the Shivwits Band and the United States for the benefit of the Shivwits Band, whose real property will be involved in the construction, operation and maintenance of the Santa Clara Project agree to provide, without cost, all easements and rights-of-way on their respective properties necessary for the construction, operation and maintenance of the Santa Clara Project.

6.4.2 The Shivwits Band, and the United States for the benefit of the Shivwits Band, agree that they shall grant and approve the right-of-way across the Shivwits Reservation
which is necessary to construct the Santa Clara Project, in accordance with 25 U.S.C. §§ 323-328 and 25 CFR Part 169 (the “Shivwits Right-of-Way”).

6.4.3 The Shivwits Right-of-Way shall be a permanent, exclusive easement for the Santa Clara Project facilities, subject to the existing highway and the Ivins Canal, and shall include a temporary construction easement.

6.4.4 Payment for the temporary construction easement shall be $4,000.00.

6.4.5 The initial payment for the Shivwits Right-of-Way shall be $1,500.00 per year for a period of 25 years. The payment shall be made on a calendar year basis. The payment for the first year of the Shivwits Right-of-Way shall be due and payable directly to the Shivwits Band within thirty days from the date WCWCD receives notice that the Secretary has approved the Shivwits Right-of-Way and shall be prorated based on the calendar year. The payment each year thereafter shall be due and payable on January 15 of each calendar year. Annual payments shall continue thereafter, in accordance with this subsection and in accordance with subsection 6.4.6.

6.4.6 There shall be new appraisals for the Shivwits Right-of-Way made at the end of each 25 year period. One appraisal shall be conducted by the Shivwits Band and one appraisal conducted by the WCWCD, or any successor operator of the Santa Clara Project. The value for each succeeding 25 year period shall be the average value and average rate of return of the two appraisals. Both appraisals must be performed by MAI licensed appraisers and use generally accepted standards for appraising rights of way and rates of return.

6.4.7 The payment for the Shivwits Right-of-Way shall be paid to the Shivwits Band by the WCWCD, or any successor operator of the Santa Clara Project, and shall be included as an operation and maintenance cost. The sole remedy for default with respect to the Shivwits Right-of-Way compensation provided for herein shall be an action for specific performance. The WCWCD, or any successor operator of the Santa Clara Project, shall be liable for any payment regardless of whether any water user is in default in its OMR&R payments.

6.4.8 The Shivwits Band, and the United States acting for the benefit of the
Shivwits Band, agree that they shall grant and approve an easement on the Shivwits Reservation for the approximately 5.3 acre portion of the Ivins Reservoir that occupies tribal land, in accordance with 25 U.S.C. §§ 323-328 and 25 CFR Part 169 and this Agreement ("Ivins Reservoir Easement").

6.4.9 The Ivins Reservoir Easement shall be a permanent, exclusive easement held in the name of WCWCD and assignable (with Bureau of Indian Affairs approval, as required by law) to any successor operator of the Santa Clara Project that is selected pursuant to Section 7.1 of this Agreement.

6.4.10 Subject to the provisions of Subsection 6.4.12(c) below, the payment for the Ivins Reservoir Easement shall be $300.00 per year and shall be paid annually at the first of the year by Ivins Irrigation to the Shivwits Band.

6.4.11 The sole remedy for default with respect to the Ivins Reservoir Easement compensation provided for herein shall be an action for specific performance. WCWCD or any successor operator of the Santa Clara Project shall be liable for the easement payment in the event Ivins Irrigation is in default on the easement payment.

6.4.12 In addition to the above annual payment, as consideration for the Ivins Reservoir Easement, all Parties, including WCWCD and Ivins Irrigation agree as follows:

(a) The Ivins Reservoir will be operated as a multi-use facility. The primary purpose will be to facilitate the Santa Clara Project as provided for in this Agreement; the secondary purpose will be recreation purposes.

(b) The Shivwits Band, Ivins Irrigation, WCWCD, and the Town of Ivins shall jointly develop an Ivins Reservoir Recreation Plan contemporaneously with the development of the Santa Clara Project OMR&R Plan which accommodates recreational use and recreational development to the maximum extent possible while first meeting the requirements of the Santa Clara Project (the "Ivins Reservoir Recreation Plan").

(c) Subject to any limits stated in the Ivins Reservoir Recreation Plan, the Shivwits Band shall have full access to Ivins Reservoir and the adjacent shoreline for recreational
purposes and the right to build structures for water-related recreational purposes on Shivwits Band land and on a three (3) acre tract of off-Reservation land located on the west half of the shoreline as shown on Exhibit D (the “Subject Property”). Upon request by the Shivwits Band, Ivins Irrigation and/or WCWCD or the successor operator of the Santa Clara Project (whichever entity then owns the Subject Property) shall grant and approve a permanent easement allowing the Shivwits Band to erect water-related recreational structures on the Subject Property free of charge (the “Recreational Easement”). Any recreational structure constructed by the Shivwits Band on the Recreational Easement shall comply with the Ivins Reservoir Recreation Plan and be available to the public without charge. Upon conveyance of the Recreational Easement to the Shivwits Band, the annual $300.00 payment for the Ivins Reservoir Easement shall terminate.

6.5 Construction Advisory Committee.

6.5.1 A Construction Advisory Committee (“Committee”) shall be established by St. George, the Shivwits Band, New Santa Clara, St. George Clara, and Ivins Irrigation, and shall be comprised of one representative from each of these parties. Actions of the Committee shall be decided by a majority vote.

6.5.2 The WCWCD shall inform the Committee regularly of the progress in the following Santa Clara Project activities: (a) developing the design and cost estimates; (b) financing; (c) permitting and environmental compliance; (d) the bid process; and (e) construction.

6.5.3 The Committee shall, as necessary or appropriate, provide oversight of and make recommendations about, the Santa Clara Project construction activities in order to maintain the viability of the Santa Clara Project construction and to assure consistency with the terms of this Agreement.

6.6 WCWCD shall own the Santa Clara Project for the benefit of and use by New Santa Clara, St. George Clara, the Shivwits Band, and Ivins Irrigation in accordance with the terms of this Agreement. The beneficial interest in the Santa Clara Project by New Santa Clara, St. George Clara, the Shivwits Band, and Ivins Irrigation shall be based on the proportionate share of the water right each of these four parties has in the Santa Clara Project as set forth in Subsection 8.3.
Change in ownership of the Santa Clara Project shall only be by unanimous consent of New Santa Clara, St. George Clara, the Shivwits Band, and Ivins Irrigation.

7.0 Santa Clara Project Operation, Maintenance, Repair, and Replacement.

7.1 WCWCD, or any successor operator of the Santa Clara Project, shall be responsible for the operation, maintenance, repair and/or replacement of the Santa Clara Project, pursuant to a contract to be negotiated and executed by WCWCD, St. George, the Shivwits Band, New Santa Clara, St. George Clara, and Ivins Irrigation. The WCWCD shall remain the operator of the Santa Clara Project for a period of not less than twenty (20) years unless otherwise agreed to by the Parties identified in this subsection 7.1. Subsequent operators of the Santa Clara Project shall be selected by consensus vote of the WCWCD, St. George, the Shivwits Band, New Santa Clara, St. George Clara, and Ivins Irrigation.

7.2 St. George Clara, New Santa Clara, Ivins Irrigation and the Shivwits Band shall each be responsible for their proportionate share of the operation, maintenance, repair and/or replacement costs of the Santa Clara Project. The proportionate share of such costs for each of these water users shall be calculated based on the percentage that each of the water user’s acre foot allocation bears to the total acre foot allocation as provided in subsection 8.3. These costs shall include those incurred in connection with the Santa Clara Project facilities to and including the Ivins Reservoir facilities and the Gunlock Reservoir facilities, and shall include the annual fees assessed by the State Engineer of Utah to cover the fees associated with the administration by the River Commissioner of the Santa Clara Project Water Rights. Excluding the Gunlock Well Field, these costs shall also include the costs for the wells, pumps, and motors utilized to provide Supplemental Project Water, as further provided in Subsection 8.5. For Supplemental Project Water delivered from the Gunlock Well Field, the Shivwits Band, New Santa Clara, St. George Clara, and Ivins Irrigation are responsible only for the power costs, including 20% surcharge, associated with water actually pumped and delivered to the Santa Clara Project facilities. Costs for system upgrades, modifications or additions required to allow the Santa Clara Project system capacity to be increased beyond that specified in the OMR&R Plan shall be borne by the
beneficiary of the upgrade and shall not be considered part of the normal operation, maintenance, repair, or replacement costs.

7.3 WCWCD shall prepare a Santa Clara Project Operation, Maintenance, Repair and Replacement Plan ("OMR&R Plan"), contemporaneously with the development of the Ivins Reservoir Recreation Plan required by Subsection 6.4.12(b), no later than 60 days after construction of the Santa Clara Project is complete and provide same to St. George, the Shivwits Band, New Santa Clara, St. George Clara, and Ivins Irrigation for review, comment and approval, provided, however, that no Party shall unreasonably withhold approval. The OMR&R Plan shall include a provision for periodic revisions to the Plan.

7.3.1 The OMR&R Plan shall include Standard Operating Procedures that specify the criteria pursuant to which the Santa Clara Project will be operated and maintained to carry out the terms of this Agreement.

7.3.2 The OMR&R Plan shall include procedures for determining annual operation, maintenance, repair and replacement costs for all the Santa Clara Project facilities, including facilities to supply supplemental water, scheduling the delivery of water in Average and Below Average Water Years, accounting for inflows into the Gunlock Reservoir, reservoir operations and instream flow releases, dredging requirements at Gunlock Reservoir, coordinating the Santa Clara Project operations and water delivery with the River Commissioner and procedures for performing annual maintenance and repairs.

7.3.3 The OMR&R Plan shall describe the detailed process by which WCWCD, or any successor operator of the Santa Clara Project, will consult with the Parties to this Agreement concerning any aspect of implementation of and compliance with this Agreement.

7.4 St. George, the Shivwits Band, New Santa Clara, St. George Clara, and Ivins Irrigation shall have the right to inspect the books of the Santa Clara Project.

7.5 Operation, maintenance, repair, and replacement costs begin to accrue on the date a Santa Clara Project water user is first notified by the WCWCD, or any successor operator of the Santa Clara Project, that water is available for delivery from the Santa Clara Project. Payment of
the annual OMR&R costs is a pre-requisite to receiving water in any Santa Clara Water Delivery Year. Upon payment of all delinquent OMR&R fees plus any late fee that has been assessed, a delinquent Santa Clara Project water user will again receive its water allocation, provided that delivery will not resume until the following Santa Clara Water Delivery Year if WCWCD, or any successor operator of the Santa Clara Project, determines that the delivery schedule that has already been set for that year cannot accommodate the delivery of water to the delinquent Santa Clara Project water user. WCWCD, or any successor operator of the Santa Clara Project, may take appropriate measures to recover OMR&R charges, including charging a late fee, which may include interest, for the nonpayment of OMR&R charges that are not paid by the due date, and may cease delivery of a user’s water and distribute it to another user to recover delinquent OMR&R charges that continue for an extended period. The choice by a Santa Clara Project water user to forego or reduce the delivery of its Santa Clara Project Water Right for any period of time shall not affect that water user’s obligation to pay its proportionate share of the operation, maintenance, repair and replacement costs.

7.6 After Congress has appropriated the One Million Dollars ($1.0 million) and deposited same in the Shivwits Band Trust Fund, as set forth in Subsection 11.5(c), the United States shall have no further obligation for OMR&R costs associated with this Agreement.

8.0 Santa Clara Project Water Delivery

8.1 Instream Flows.

8.1.1 WCWCD, Ivins Irrigation, Lower Gunlock, New Santa Clara, the Shivwits Band, St. George, and St. George Clara by agreement do hereby make available to the Utah Division of Wildlife Resources on a perpetual basis at Gunlock Reservoir sufficient water to provide 3.0 cfs of instream flow in the Santa Clara River immediately below Gunlock Reservoir. The instream flow water shall have first priority to water deliveries from the Santa Clara Project.

8.1.2 The Utah Division of Wildlife Resources shall file for and secure the approval of the Utah State Engineer for an instream flow water right in the amount of 3.0 cfs in the Santa Clara River from Gunlock Reservoir downstream to the point of diversion for Bloomington.
8.1.3 Upon approval by the Utah State Engineer of the instream flow water right described in Subsection 8.1.2, WCWCD or any successor operator of the Santa Clara Project, shall release sufficient water from Gunlock Reservoir that when added to any spills and/or seepage flows will provide 3.0 cfs on a continual basis in the Santa Clara River immediately downstream of Gunlock Reservoir for instream flow requirements to further the conservation strategies for the benefit of the Virgin Spinedace that are set forth in the "Conservation Agreement and Strategy" which is attached as Exhibit E and incorporated herein by reference. WCWCD, or any successor operator of the Project, shall measure the 3.0 cfs and maintain the flow measurements as public records.

8.1.4 The Utah Division of Wildlife Resources, Lower Gunlock, and WCWCD shall enter into an agreement to amend the agreement, dated June 10, 1981, to assign 1,086 acre-feet of the Conservation Pool in Gunlock Reservoir to WCWCD. Such storage shall be used to provide water for the Santa Clara Project instream flow requirement and other Santa Clara Project purposes. The amended agreement required by this Subsection 8.1.4 is attached as Exhibit F and incorporated herein by reference.

8.2 Santa Clara Project Water shall be delivered to St. George Clara, New Santa Clara, Ivins Irrigation and the Shivwits Band in a Santa Clara Water Delivery Year based on the annual acre foot allocation and maximum diversion rate in cfs for each of these four Parties as specified in Subsections 8.3 and 8.4 of this Agreement. The point of delivery of the Santa Clara Project water for each of these parties shall be as specified in Subsections 8.2.1 through 8.2.4. These points of delivery may be modified by agreement of the Parties and the operator of the Santa Clara Project, and in accordance with applicable law. A temporary application submitted to the State Engineer of Utah for approval shall not require approval of any other Party to this Agreement as long as WCWCD, or any successor operator of the Project, determines that the temporary application does not adversely affect the operations of the Santa Clara Project.

8.2.1 The St. George Clara water shall be measured and delivered at the Ivins Reservoir outlet.
8.2.2 The New Santa Clara water shall be measured and delivered at the Ivins Reservoir outlet.

8.2.3 The Ivins Irrigation water shall be measured and delivered at the Santa Clara Project pipeline above Ivins Reservoir.

8.2.4 The Shivwits Band water shall be measured and delivered at the Santa Clara Project pipeline on the Shivwits Reservation.

8.3 In an Average Water Year:

8.3.1 The Santa Clara Project shall deliver to St. George Clara 3,278 acre feet annually at a diversion rate not to exceed 8.0 cfs, and to New Santa Clara 2,163 acre feet annually at a diversion rate not to exceed 5.0 cfs, measured as the water leaves Ivins Reservoir.

8.3.2 The Santa Clara Project shall deliver to the Shivwits Band 1,900 acre feet annually at a diversion rate not to exceed 4.5 cfs, measured at the outlets of the Santa Clara Project pipeline on the Shivwits Reservation.

8.3.3 The Santa Clara Project shall deliver to Ivins Irrigation 1,500 acre feet of water annually at a diversion rate not to exceed 4.0 cfs, measured at the Santa Clara Project pipeline above Ivins Reservoir.

8.4 In a Below Average Water Year:

8.4.1 The Santa Clara Project water delivery to Ivins Irrigation shall be reduced initially to 1,000 acre feet annually in order to satisfy the Santa Clara Project Water Rights of St George Clara, New Santa Clara, and the Shivwits Band.

8.4.2 If the Santa Clara Project Water Rights of St. George Clara, New Santa Clara, and the Shivwits Band are not capable of being satisfied fully after the reduction in delivery of the Ivins Irrigation water delivery provided in Subsection 8.4.1, the projected percentage of surface water allocations shall be determined for the Santa Clara Water Delivery Year. The percentage of the allocation shall be evaluated monthly and updated as necessary. St. George Clara, New Santa Clara, and the Shivwits Band each shall receive a proportionate allocation of the available Santa Clara Project water supply based on their respective acre foot allocations set forth
in Subsection 8.3, and Ivins Irrigation shall receive a proportionate allocation based on its acre foot allocation set forth in Subsection 8.4.1. Supplemental Project Water can be supplied to the Shivwits Band, New Santa Clara, St. George Clara, and Ivins Irrigation as provided in Subsection 8.5 up to the full allocation volumes identified in Subsections 8.3 and 8.4.

8.5 Supplemental Project Water

8.5.1 The groundwater rights of the Parties comprising Supplemental Project Water shall be part of the Santa Clara Project Water Right supply and the Supplemental Project Water shall be utilized as needed to satisfy the water demands set forth in Subsections 8.3 and 8.4 in Below Average Water Years.

8.5.2 The decision regarding the use of the Supplemental Project Water shall be made by the WCWCD, or any successor operator of the Santa Clara Project, in conjunction with the Parties entitled to receive Santa Clara Project Water and St. George. Only those Parties which receive Supplemental Project Water shall be obligated to pay the related operation, maintenance, repair, and replacement costs in accordance with Subsection 7.2 for that Supplemental Project Water.

8.5.3 If any Santa Clara Project water user chooses not to receive its full allocation of Supplemental Project Water in any Santa Clara Water Delivery Year, any other Santa Clara Project water user may elect to take delivery of such unused Supplemental Project Water, subject to the water right limitations in subsections 8.3 and 8.4, by filing a written request in that year with WCWCD, or any successor operator of the Santa Clara Project, and paying the associated OMR&R costs. The requests will be granted pro rata among those making the requests based on the available unused Supplemental Project Water supply.

8.5.4 St. George shall be solely responsible for payment of all costs associated with drilling and equipping the wells it uses to supply Supplemental Project Water. The operation, maintenance, repair, and replacement costs for the groundwater wells developed by St. George to provide 4.0 cfs of the Supplemental Project Water supply shall be allocated between St. George and the Parties entitled to Santa Clara Project Water based on quantities of water used by these
Parties in a Below Average Water Year from the Gunlock Well Field, and shall be prorated among
the Santa Clara Project water users in accordance with subsection 7.2 of this Agreement.

8.5.5 The water made available for use in the Santa Clara Project by St. George
pursuant to this Agreement constitutes an exchange of water and is a compromise and settlement
of water right claims of the Parties from the Santa Clara System and thus does not constitute a
lease or sale of St. George’s water rights, water supply or waterworks contrary to Article XI,
Section 6 of the Utah Constitution.

8.6 Water User Delivery Systems. St. George Clara, New Santa Clara, Ivins Irrigation,
and the Shivwits Band shall be responsible, at their sole cost and expense and without any
obligation to the other Parties, for the construction, installation, operation, maintenance, repair and
replacement of their respective water delivery systems from the Santa Clara Project pipelines to
their respective places of use. The water delivered shall be metered from the Santa Clara Project
pipelines and the meters shall constitute a Project expense.

8.7 Substitute Water. The WCWCD may provide substitute water to St. George Clara,
New Santa Clara, Ivins Irrigation, and the Shivwits Band from sources other than from the Santa
Clara System. The substitute water shall be of equal quantity and quality, shall not include sewer
effluent water, and shall be made available at the points of delivery set forth in subsection 8.2. The
substitute water will be provided in exchange for water from the Santa Clara System and the
WCWCD would be entitled to utilize an amount of Santa Clara River water equal to the substitute
water provided by the WCWCD for WCWCD purposes.

9.0 Santa Clara Project Deliveries for Non-Project Water Rights.

The Santa Clara Project shall be configured and used to deliver Santa Clara River water to
satisfy such rights that Edward Bowler has as a shareholder in the Gunlock Irrigation Company for
delivery of Santa Clara River water below Gunlock Reservoir. Edward Bowler shall not be
obligated to pay any construction or operation, maintenance, repair or replacement costs for the
Santa Clara Project.
10.0 Change Applications.

10.1 Pooled Water Rights. The Parties whose water rights are pooled as provided for in subsection 4.2 of this Agreement shall file change applications as required to accomplish the purposes of the Agreement. WCWCD shall assist the Parties in the preparation and filing of such change applications and pay the associated costs and filing fees.

10.2 St. George Water Right Applications. St. George shall file applications and seek approval of the State Engineer of Utah to: (a) segregate 6.0 cfs of groundwater from Water Right Number 81·1715 (A33708a); (b) allow 4.0 cfs of the 6.0 cfs of groundwater to be developed from the Gunlock Well Field and used as Supplemental Project Water in Below Average Water Years in accordance with this Agreement; and (c) allow St. George to use the 6.0 cfs of groundwater to be developed from the Gunlock Well Field for municipal purposes in Average Water Years and at least 2.0 cfs in Below Average Years. In the event that the State Engineer of Utah administers the priority of the Gunlock Well Field conjunctively with surface water in the Santa Clara System, St. George shall manage its water supplies to assure that the 4.0 cfs designated as Supplemental Project Water is made available in accordance with this Agreement.

11.0 Enforceability Date Of Agreement. This Agreement shall be effective and enforceable only after all of the following have been accomplished:

11.1 Execution of this Agreement by the Parties hereto;

11.2 Execution of the St. George Water Reuse Project Agreement by all the parties thereto;

11.3 Execution of the Settlement Agreement, and the Waivers and Release of Claims contained therein, by the parties thereto;

11.4 Ratification and confirmation of the Shivwits Water Right set forth in the Settlement Agreement in legislation duly enacted by the United States Congress;

11.5 Authorization and appropriation by the United States Congress and deposit into the Shivwits Trust Fund of: (a) fifteen million dollars ($15,000,000.00) for the Shivwits Band's share of the costs of the St. George Water Reuse Project as set forth in the St. George Water Reuse
Project Agreement; (b) five million dollars ($5,000,000.00) in consideration of the Shivwits Band’s execution of a waiver and release of claims against the United States; and (c) one million dollars ($1,000,000.00) for the Shivwits Band’s share of the operation, maintenance, repair and replacement costs associated with this Agreement;

11.6 Approval by the State Engineer of Utah of any and all applications necessary to effectuate the terms of this Agreement, the St. George Water Reuse Agreement, and the Settlement Agreement, from which no further appeals may be taken;

11.7 Execution by Utah Division of Wildlife Resources, WCWCD, and Lower Gunlock of the document required in subsection 8.1.4 of this Agreement;

11.8 Issuance of a judgment and decree in the Virgin River Adjudication, pursuant to Utah Rule of Civil Procedure 54(b), that is final as to all parties to the Santa Clara Division of the Virgin River Adjudication and from which no further appeals may be taken, which confirms the Utah State Engineer’s Proposed Determination regarding the water rights pooled in accordance with this Agreement, the Shivwits Water Right set forth in the Settlement Agreement, and changes all “prior to 1890” water rights set forth in the 1922 adjudication entitled St. George Santa Clara Field Co., et al. v. Newcastle Reclamation Co., et al. to “1890” water rights; and

11.9 The Secretary of the Interior has published a notice in the Federal Register that all of the actions identified in this Section 11 have been completed.

12.0 Contingent Upon Appropriation of Funds

The expenditure or advance of any money or the performance of any obligation by the United States under this Agreement shall be contingent upon appropriation of funds therefore. No liability shall accrue to the United States or to any other Party in the event funds are not appropriated.

13.0 Counterparts.

This Agreement may be executed in counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same Agreement.
14.0 **Entire Agreement.**

This Agreement supersedes any prior understanding, representation, or agreement of the Parties regarding the subject matter hereof.

15.0 **Evidentiary Effect of Negotiations.**

This Agreement has been arrived at in the process of good faith negotiation for the purpose of resolving legal disputes, including pending litigation, and all Parties agree that no offers and/or compromises made in the course thereof shall be construed as admissions against interest or be used in any legal proceeding other than one for approval, confirmation, interpretation, or enforcement of this Agreement.

16.0 **Force Majeure.**

16.1 The WCWCD, or any successor operator of the Santa Clara Project, shall exercise reasonable diligence and care to avoid interruptions of delivery of water from the Santa Clara Project, and shall not be liable for any damage or loss occasioned by any failure or interruption caused by a state of Force Majeure. For purpose of this Agreement, Force Majeure means acts of God, acts of public enemies, insurrection, riots, fires, explosions, floods, earthquakes, strikes, emergency actions the WCWCD, or any successor operator of the Santa Clara Project, may be compelled to take to prevent serious injuries or death to persons, lawful orders or acts of civil or military authority, or other causes of similar nature. The WCWCD, or any successor operator of the Santa Clara Project, shall restore its delivery of water from the Santa Clara Project as soon as is reasonably possible after such delivery is interrupted due to a state of Force Majeure.

16.2 In the event the WCWCD, or any successor operator of the Santa Clara Project, believes a state of Force Majeure exists such that the WCWCD, or any successor operator of the Santa Clara Project, cannot meet its obligation as required by this Agreement, the WCWCD, or any successor operator of the Santa Clara Project, shall provide written notification as expeditiously as possible to any affected Party, but no later than sixty (60) days after the event that resulted in a state of Force Majeure. This written notice shall describe the anticipated duration of the inability of WCWCD, or any successor operator of the Santa Clara Project, to deliver water.
from the Santa Clara Project, the cause or causes of the state of Force Majeure, a description of
the measure(s) to be taken by the WCWCD, or any successor operator of the Santa Clara Project,
to permit it to meet its obligation under this Agreement, and an estimated timetable for
implementation of these measures. The WCWCD, or any successor operator of the Santa Clara
Project, shall take all reasonable measures to resume delivery of water in accordance with this
Agreement after a state of Force Majeure occurs and written notification of same is provided by
the WCWCD, or any successor operator of the Santa Clara Project.

17.0 Governing Law and Rights and Remedies.

17.1 This Agreement shall be construed in accordance with the applicable law of the State
of Utah and applicable Federal law. Nothing contained herein waives the right of the United States
or the Shivwits Band to object to the jurisdiction of the courts of the State of Utah to adjudicate
any dispute arising under this Agreement, or waives the right of any Party to object to the
jurisdiction of any federal court to adjudicate any dispute arising under this Agreement.

17.2 The Parties shall have all rights and remedies provided under applicable federal or
state law for a breach or threatened breach of this Agreement; provided, however, that because
this Agreement is intended to supply water in perpetuity to the Shivwits Band in lieu of the water
rights claims filed by the United States on behalf of the Shivwits Band in the Virgin River
Adjudication, termination of this Agreement for breach of this Agreement is not a permitted or
authorized right or remedy under this Agreement. These rights and remedies shall not be mutually
exclusive, and the exercise of one or more of these rights and remedies shall not preclude the
exercise of any other rights and remedies. Each Party confirms that damages at law may be an
inadequate remedy for a breach or threatened breach of any provision hereof and the respective
rights and obligations of the Parties hereunder shall be enforceable by specific performance,
injunction, or other equitable remedy. Nothing in this Agreement shall be construed to waive the
sovereign immunity of the United States.

18.0 Modification of Agreement.

Any modification of this Agreement or additional obligation assumed by any Party in
connection with this Agreement shall be binding only if evidenced in writing and signed by each
Party or an authorized representative of each Party.

19.0 Necessary Acts and Cooperation.

19.1 The Parties shall do any act or thing and execute any and all instruments required by
this Agreement and which are necessary and proper to make effective the provisions of this
Agreement; provided, however, that the United States shall not be required to do any act or thing
that is not authorized by law and for which funds have not been appropriated by Congress; and
provided, further, that Utah shall not be required to do any act or thing that is not authorized by
law and for which funds have not been appropriated by the Utah legislature.

19.2 The Parties shall not protest any applications filed with the State Engineer of Utah in
furtherance of or as needed to effectuate the provisions of this Agreement, the St. George Water
Reuse Agreement, or the Settlement Agreement.

19.3 The Parties shall not file any objection or protest to any Proposed Determination
which may be issued by the State Engineer of Utah in furtherance of or as needed to effectuate this
Agreement, the St. George Water Reuse Agreement, or the Settlement Agreement; except to the
extent that such Proposed Determination may be inconsistent with these agreements.

19.4 The Parties shall not file any objection or protest to the Proposed Judgment and
Decree that is filed by stipulation of the Parties in the Virgin River Adjudication.

19.5 The Parties shall file in the Virgin River Adjudication those documents required to
obtain a judgment and decree, pursuant to Utah Rule of Civil Procedure 54(b), that is final as to all
parties to the Santa Clara Division of the Virgin River Adjudication and from which no further
appeals may be taken, which confirms the Utah State Engineer's Proposed Determination
regarding the water rights pooled in accordance with this Agreement, the Shivwits Water Right set
forth in the Settlement Agreement, and changes all "prior to 1890" water rights set forth in the
1922 adjudication entitled St. George Santa Clara Field Co., et al. v. Newcastle Reclamation Co.,
et al. to "1890" water rights.
20.0 No Waiver.

No delay or failure by any Party to exercise any right under this Agreement, and no partial or single exercise of that right, shall constitute waiver of that or any other right, unless expressly provided herein. No waiver by a Party under this Agreement shall affect or alter the remainder of this Agreement, and each and every covenant, duty, and condition hereof shall continue in full force and effect with respect to any other then existing or subsequently occurring breach.

21.0 Notices

Any notice to be given hereunder shall have been properly given when hand delivered to the officer or manager designated hereinbelow, or when deposited in the United States mail, certified or registered, postage prepaid, addressed as follows:

22.0 **Officials Not To Benefit**

No member of or delegate to Congress or Resident Commissioner shall be admitted to any share of this Agreement or to any benefit that may arise herefrom. This restriction shall not be construed to extend to this Agreement if made with a corporation or company for its general benefit.

23.0 **Persons Bound By Agreement.**

23.1 This Agreement shall be binding upon and inure to the benefit of the Parties hereto and their respective employees, representatives, successors, and assigns.

23.2 In any action to enforce any term of this Agreement, no Party hereto shall raise as a defense the failure by any of its officers, directors, agents, servants, employees, successors, assigns, and contractors to take actions necessary to comply with the provisions of this Agreement. Each Party to this Agreement reserves its rights against any such person or entity whose acts cause or permit the Party to violate the terms of this Agreement. Each Party to this Agreement shall be responsible for the acts of its officers, directors, agents, servants, employees, successors, assigns, and contractors who violate, cause or permit the Party to violate the terms of this Agreement.
24.0 Signature Authority

The undersigned representative of each Party to this Agreement certifies that he or she is fully authorized to enter into the terms and conditions of this Agreement, to execute it, and to bind the Party each person represents to this Agreement.

IN WITNESS THEREOF, the Parties have executed this Agreement on the day and year first written above.

EXHIBIT A

[Reference: Section 3.7]

SANTA CLARA PROJECT DESCRIPTION

This project is located in southwestern Utah in Washington County. It is located in Sections 5, 8, 17, 20, 25, 26, 27, 28, and 29, T41S, R17W, SLB&M. The project will consist of a pressurized pipeline, 24 inches in diameter and approximately six miles long, used to deliver water from Gunlock Reservoir to Ivins Reservoir, with diversions to water users from the pipeline and from releases from Ivins Reservoir. The purpose of this pipeline is to use water more efficiently, and to reduce water losses from evaporation and infiltration. The conserved water will be used to provide year-long river flows below Gunlock Reservoir and to provide water to assist in settling the water rights claims of the Shivwits Band and the United States on behalf of the Shivwits Band. It is estimated that the project will conserve 13 cfs and yield 3,600 acre-feet of water per year.

The pipeline will begin at the outlet of Gunlock Reservoir and will then follow the “Gunlock Highway”, being buried in either shoulder of the road and varying from one side of the road to the other depending on the location of existing utilities and other pipelines. It will be buried with at least two feet of cover. The pipeline will follow the road in a southerly direction to the Winsor Diversion (Shem Dam) located beside the Gunlock Highway on the Shivwits Indian Reservation. The dam diverts water out of the Santa Clara River into the existing Santa Clara canal.

The pipeline will then follow the existing Santa Clara canal to Ivins Reservoir. The pipeline will be laid in the existing canal, bedded in sand and covered, or laid in the road adjacent to the canal. If laid in the road, it will be in the disturbed area of the existing road, and covered with at least two feet of cover. This project will replace five Santa Clara River diversions from Gunlock Reservoir to the Town of Santa Clara. The pipeline will be equipped with fully automated recording stations to monitor water deliveries accurately to each diverting entity on a daily and cumulative yearly basis and to minimize measurement activities of the River Commissioner on the Shivwits Indian Reservation.

The water from the Santa Clara Project will be managed as provided for in the Santa Clara Project Agreement.

CONSERVATION AGREEMENT
Virgin spinedace
Lepidomeda mollispinis mollispinis

This Conservation Agreement for the Virgin spinedace Lepidomeda mollispinis mollispinis has been developed in order to expedite conservation measures needed for the continued existence and recovery of the species. These measures will be taken in accordance with the Endangered Species Act of 1973 as amended (ESA). The agreement focuses on two objectives. The first is to reduce and eliminate significant threats. The second is to enhance and/or stabilize specific reaches of occupied and unoccupied historic habitat. These objectives will be reached through implementation of the Conservation Strategy for the species (Attachment A). Full implementation of this agreement and the associated strategy will reduce threats to the Virgin spinedace that warrant its listing as a sensitive species by State and Federal agencies, and as threatened or endangered under the ESA.

The Virgin spinedace is a small minnow endemic to the Virgin River Basin in Utah, Arizona, and Nevada. Shoreline-land ownership within the flood plains of Virgin spinedace habitat is approximately 38% federal, 3% state, 5% Paiute Tribe managed and 54% private. Past and present human activities such as water development projects, agriculture, mining, urbanization and the introduction of non-indigenous fishes have altered the Virgin River ecosystem. There has been a 37-40% reduction (approximately 84 km/52 mi) in Virgin spinedace historic range (approximately 226 km/140 mi). Current populations are fragmented, and occur almost exclusively within Utah. Due to these reductions and perceived threats to the species, the United States Fish and Wildlife Service (FWS) proposed listing the species as threatened, pursuant to the ESA, on May 18, 1994 (59 FR 25875).

I. OTHER SPECIES INVOLVED

The primary focus of this agreement is the conservation and enhancement of the Virgin spinedace and its habitat; however, other species occurring within or adjacent to Virgin spinedace habitat may also benefit. Three hundred and sixty-six species of fish, amphibians, reptiles, birds, and mammals are known to co-exist in the same or adjacent habitat of the Virgin spinedace. Eighty-one of these species are listed as sensitive in either Utah, Arizona or Nevada and/or are listed under the ESA by FWS (Appendix A in Conservation Strategy). An additional eight sensitive plant species and seven sensitive invertebrate species also co-exist in the same or adjacent habitat of the Virgin spinedace. Using an ecosystem approach, the Virgin spinedace
Conservation Agreement could reduce or possibly eliminate threats for several of these species, which could preclude their need for federal listing pursuant to the ESA.

Separate Memorandum(s) of Understanding and Cooperative Agreements will be developed with additional parties as necessary to ensure implementation of specific conservation measures.

III. AUTHORITY

* The signatory parties hereto enter into this Conservation Agreement and the attached Conservation Strategy under federal and state law, as applicable, including but not limited to Section 2(c)(2) of the Endangered Species Act of 1973, as amended, which states that "the policy of Congress is that Federal agencies shall cooperate with State and local agencies to resolve water resource issues in concert with conservation of endangered species."

* All parties to this Agreement recognize that they each have specific statutory responsibilities that cannot be delegated, particularly with respect to the management and conservation of wildlife and the management, development and allocation of water resources. Nothing in this Agreement or the Strategy is intended to abrogate any of the parties' respective responsibilities.

* This Agreement is subject to and is intended to be consistent with all applicable Federal and State laws and interstate compacts.

IV. STATUS AND DISTRIBUTION OF THE VIRGIN SPINEDACE

In 1979 and 1989, the Virgin spinedace was identified as threatened by the American Fisheries Society, Endangered Species Committee. Criteria used for determining this status were consistent with the ESA. Their determination was based on review of original data and discussions with pertinent agencies and knowledgeable scientists. On May 18, 1994, the FWS proposed the species for listing as threatened under the ESA (59 FR 25875).

The Virgin spinedace currently occupies approximately 60-63% of historic habitat, nearly all being in Utah. Populations no longer exist in Nevada and few individuals remain in Arizona. The species occupies approximately 117 km (73 mi) of tributary streams and 25 km (16 mi) of the mainstem Virgin River. Occupied streams include three reaches of Beaver Dam Wash, two reaches of the Santa Clara River, isolated reaches in Moody Wash and Magotsu Creek, one reach of Ash Creek, two reaches of La Verkin Creek, two reaches of North Creek, the North and East Forks of the Virgin River, and Shunes Creek. Occupied habitat in the mainstem Virgin River is considered to be limited to the area above Quail Creek Diversion. Occasionally, Virgin spinedace have been collected in the Virgin River between Pah Tampe Springs and
Littlefield, Arizona. Their occurrence has generally been associated with tributary inflows. This area is not considered to be historic habitat because this reach does not have the same habitat components found in reaches supporting self-sustaining populations. A detailed description of the status and distribution for this species is presented in the Conservation Strategy.

V. PROBLEMS FACING THE SPECIES

The FWS assessed real and/or potential problems facing the species based on five criteria as required by Section 4(a)(1) of the ESA. Within each of these criteria, several factors which may have contributed to the elimination or degradation of Virgin spinedace habitat and its populations were identified (59 FR 25875 dated May 18, 1994). The threats identified and described by the FWS (59 FR 25875) do not necessarily reflect the views of all signatories to this agreement. The Conservation Strategy provides a detailed review of problems and threats to the species that signatories to this agreement will address with management actions.

VI. CONSERVATION ACTIONS TO BE IMPLEMENTED

In order to meet the objectives of this agreement, seven conservation actions will be implemented. These actions, as defined and detailed in the Strategy, include: establish existing conditions as a baseline; re-establish population maintenance flows; enhance and maintain habitat; selectively control non-indigenous fish; maintain genetic viability; monitor populations and habitat; and develop a mitigation plan and protocol for future activities. In addition, four general administrative actions, as outlined below, will be implemented: coordinate conservation activities; implement the conservation schedule; fund conservation actions; and assess conservation progress.

Coordinating Conservation Activities

* Administration of the conservation agreement will be conducted by the Virgin Spinedace Conservation Team (VSCT). The team will consist of a designated representative from each signatory to this Agreement and may include technical and legal advisors and other members as deemed necessary by the signatories.

* Since the majority of the areas of concern covered by this Agreement are located in Utah, and since the State of Utah presently has primary jurisdiction over Virgin spinedace within the State, the designated team leader will be the Utah Department of Natural Resources, Division of Wildlife Resources.
representative.

* Authority of VSCT shall be limited to making recommendations for the conservation of Virgin spinedace to the Director, Utah Division of Wildlife Resources.

* The VSCT will meet annually to develop yearly conservation schedules, review the Strategy, and modify the Strategy as required.

* The VSCT will meet on a quarterly basis to report on the progress of implementing the Conservation Strategy.

* VSCT meetings will be open to the public. Minutes of the meetings will be kept and distributed to any interested party.

Implementing Conservation Schedule

* A total of 10 years is anticipated for full implementation of actions identified and specified in the Conservation Strategy. Nevertheless, the parties agree that significant actions to benefit the Virgin spinedace will be implemented within the first five (5) years. These actions will be determined by the VSCT.

* Conservation actions will be scheduled on a yearly basis. Activities that will be implemented in 1995 are listed in Table 1.

* As leader of the VSCT, the Utah Division of Wildlife Resources, Department of Natural Resources, will coordinate conservation activities and monitor conservation actions taken by participants of this Agreement to determine if all actions are being implemented and carried out in accordance with the Conservation Strategy and annual schedule.

Funding Conservation Actions

* It is anticipated that expenditures to implement this Agreement could exceed $3,000,000 (Table 2). It is projected that the actions implemented for the re-establishment of population maintenance flows to stream channels will incur the greatest expense and occur during the first three to five years of the agreement.

* Funding for the Conservation Agreement will be provided by a variety of sources. Federal, State and local sources will need to provide or secure funding for initiative procedures of the Conservation Agreement.

- Federal sources include, but will not be limited to, the FWS, BLM, Land and Water Conservation funds, and the Natural Resource Conservation Service.
- State funding sources include, but will not be limited to, direct appropriation of funds by the legislature, Community Impact Boards, Water Resources Revolving funds, State Department of Agriculture (ARD), and State Resource Management Agencies.

- Local sources of funding will be provided by the Habitat Conservation Plan, Water District, cities and towns, Washington County, and local irrigation companies.

* In-kind contributions in the form of personnel, field equipment, supplies etc., will be provided by participating agencies (Table 3). In addition, each agency will have specific task responsibilities and proposed actions/commitments related to their in-kind contributions.

* It is understood that all funding commitments made under this Agreement are subject to approval by the appropriate local, state or federal entities.

Conservation Progress Assessment

* A quarterly assessment of progress towards implementing actions identified in this agreement will be provided to the Director, Utah Division of Wildlife Resources by VSCT. This assessment will be based on updates and evaluations by VSCT members. Copies of this assessment will also be provided to the signatories of this document.

* An annual assessment of conservation accomplishments identified in Table 1 and subsequent yearly schedules will be made by VSCT. This assessment will determine the effectiveness of this agreement and whether revisions are warranted. It will be provided to the Director, Utah Division of Wildlife Resources by VSCT. Copies of this assessment will also be provided to the signatories of this document.

* If threats to the survival of the Virgin spinedace become known that are not or cannot be resolved through this or any Conservation Agreement, the Utah Division of Wildlife Resources immediately will notify all signatories.

VII. DURATION OF AGREEMENT

The initial term of this Agreement shall be 5 years. Prior to the end of each 5 year period, a thorough analysis of actions implemented for the species will be conducted by the VSCT. If all signatories agree that sufficient progress has been made towards the conservation and recovery of the Virgin spinedace this Agreement shall be extended for an additional five (5)
Any party may withdraw from this Agreement on sixty (60) days written notice to the other parties.

II. NATIONAL ENVIRONMENTAL POLICY ACT (NEPA) COMPLIANCE

Implementation of this agreement is covered under authorities outlined in section III listed above. We anticipate that any survey, selection, or research activities for implementation and maintenance of the Conservation Agreement will not entail significant Federal actions under the NEPA and will be given a categorical exclusion designation. All other actions will be evaluated prior to implementation and will comply with NEPA regulations.

FEDERAL AGENCY COMPLIANCE

During the performance of this agreement, the participants agree to abide by the terms of Executive Order 11246 on non-discrimination and will not discriminate against any person because of race, color, religion, sex or national origin.

No member or delegate to Congress or resident Commissioner, will be admitted to any share or part of this agreement, or to benefit that may arise therefrom, but this provision shall be construed to extend to this agreement if made with a poration for this its general benefit.

ATTACHMENT A

CONSERVATION STRATEGY

Virgin spinedace
Lepidomeda mollispinis mollispinis

PURPOSE

The purpose of the present document is to describe specific procedures and strategies required for conservation of Virgin spinedace. The general conservation approach focuses on two main objectives. The first objective is to eliminate threats where possible, and reduce threats to the greatest extent possible that cannot be eliminated entirely. The second is to enhance and/or stabilize instream flows in specific reaches of occupied and unoccupied habitat. Though the primary focus of this strategy is conservation and enhancement of the Virgin spinedace, it could also reduce or eliminate threats and improve habitat for many other species, which could preclude their need for federal listing pursuant to the Endangered Species Act of 1973 as amended (ESA).

Definitions

For the purposes of the Agreement and Strategy, the following terms are defined as:

Occupied Habitat - Occupied habitat consists of stream reaches containing self-sustaining Virgin spinedace populations.

Historic Habitat - Historic habitat consists of stream reaches that have been shown, can be shown, and/or can logically be deduced as historically being occupied by Virgin spinedace. This area is approximately 226 km (141 mi). The exact extent of historic habitat is unknown. Historically, spinedace habitat probably fluctuated with changing environmental conditions.

Population Maintenance Flows - Population maintenance flows are flows of sufficient magnitude to maintain self-sustaining Virgin spinedace populations during low-flow periods. These flows are dependent on flow events of sufficient magnitude, timing, and duration to maintain channel characteristics and provide environmental cues.

Self-Sustaining Population - Self-sustaining populations are those with sufficient numbers, age class structure, and natural reproductive success to provide for their long-term survival.

Non-indigenous - An organism that is not native, or occurs naturally in a specific area or environment.
The Virgin River basin is characterized by a diverse landscape with unique communities of fauna and flora. The basin encompasses approximately 15,600 km$^2$ (6000 mi$^2$). Virgin River headwaters are in Washington and Kane County, Utah, and the stream flows in a general southwesterly direction to empty into Lake Mead on the Colorado River in Nevada. Elevations range from 3300 m (10,000 ft) above mean sea level (msl) near the headwaters to less than 700 m (2000 ft) at Littlefield, Arizona. The river varies from reaches with narrow, steep-walled canyons and steep gradients to low desertland with broad open canyons and low gradients. Mean annual precipitation ranges from about 20 cm (8 in) at low elevations to about 100 cm (40 in) at higher elevations.

Due to the diverse topography, this river and its associated riparian area and floodplain provides habitat for over 366 species of wildlife (Appendix A). Of these, 81 species have been identified as sensitive. There are six fish species indigenous to the basin: woundfin (*Plagopterus argentissimus*), Virgin River chub (*Gila seminuda*), flannelmouth sucker (*Catostomus latipinnis*), desert sucker (*Catostomus clarki*), speckled dace (*Rhinichthys osculus*), and Virgin spinedace (*Lepidomeda m. mollispinis*). Except for the speckled dace, all of these have been listed or are candidates for federal listing under the ESA.

The Virgin spinedace was recognized in 1979 as a threatened species by the scientific community. The Endangered Species Committee of the American Fisheries Society added it to their list of threatened and endangered fish after assessing criteria consistent with the ESA (Deacon et al., 1979). Their determination of the species' status was based on review of original data and discussions with pertinent agencies and knowledgeable scientists. On May 18, 1994, the United States Fish and Wildlife Service (FWS) proposed the species for listing as a threatened species pursuant to the ESA (59 FR 25875).

**Systematics and Description**

The Virgin spinedace, *Lepidomeda mollispinis mollispinis* is a member of an endemic tribe of western cyprinids, the Plagopterini (Miller and Hubbs, 1960). The group is comprised of three genera: *Meda, Plagopterus* and *Lepidomeda*. The first two are monotypic, represented by the spikedace (*M. fulgida*) and woundfin (*P. argentissimus*). *Lepidomeda* is a polytypic genus containing four species: the White River spinedace (*L. albivallis*), the Pahranagat spinedace (*L. altivelis*), the Little Colorado spinedace (*L. vittata*), and the Virgin spinedace (*L. mollispinis*). *L. mollispinis* is further classified into two subspecies; *L. m. pratensis* (Big Springs spinedace) and *L. m.
mollispinis (Virgin spinedace). The Pahranagat spinedace is considered extinct (Miller and Hubbs, 1960; Valdez et al., 1991). Extant members of the tribe Plagopterini are rare. The woundfin and White River spinedace are listed as endangered (35 CFR 16047 and 50 FR 37198 respectively). The spikedace (51 FR 23781), Big Springs spinedace (50 FR 12302) and the Little Colorado River spinedace (52 FR 35040) are listed as threatened.

Spinedace get their name from the fusion of two anterior, hardened spiny rays of the dorsal fin and a similar structure located in the pelvic fin. The Virgin spinedace derives its specific name from the Latin words mollis, meaning soft, and spinis, meaning spine, both referring to the soft-tipped second dorsal spine (Miller and Hubbs, 1960).

The body of the Virgin spinedace is silvery with a brassy sheen and occasionally with light sooty blotches on the dorso-lateral half. During breeding, bases of the paired fins are reddish-orange. The Virgin spinedace is characterized by a terminal mouth, rounded head and belly, and a body size typically ranging from 60 mm to 120 mm (2.4 to 4.7 in SL) (Rinne, 1971; Addley and Hardy, 1993). The species has a well-scaled body, with 77-91 scales on the lateral line and two rows of pharyngeal teeth which typically number 2, 5-4, 2 (Addley and Hardy, 1993; Sigler and Miller, 1963; Valdez et al., 1991). The dorsal fin has eight rays and the anal fin usually includes nine rays, but may vary from eight to ten rays.

Life History

The life history of the Virgin spinedace was described by Rinne (1971). Having a life-span of about three years, the fish reaches sexual maturity at about one year. Populations typically are comprised mostly of young-of-the-year (YOY) and one-year-old fish. Because of the mild climate of Virgin spinedace habitat, age determination after one year can be difficult. However, Rinne (1971) indicated that fairly accurate estimates could be made using SL: young-of-the-year <55 mm, age 1 55-76 mm, age 2 77-85 mm, age 3 >85 mm.

Although sexual dimorphism is not apparent most of the year, sexes can be distinguished during peak breeding season. Females tend to be more robust and plump, while males remain streamlined. Furthermore, the vent of the female becomes swollen and the ovipositor becomes a reddish color (Rinne, 1971). Both sexes exhibit the reddish-orange coloration at the bases of the paired fins.

Annual spawning of the Virgin spinedace has been observed from April through June at mean daily water temperatures of 13-17°C and day lengths of about 13 hrs. Rinne (1971) found that one-year-old females had the lowest mean relative fecundity averaging.
459 eggs, while two and three-year-old females averaged a 42% and 34% increase in mean relative fecundity over one-year-olds, respectively. Since populations are comprised primarily of one year olds, they often comprise 90% of the spawning population (Addley and Hardy, 1993).

Virgin spinedace are typically found in clear, cool, swift streams that have interspersed pools, runs, and riffles (Deacon et al., 1979; Valdez et al., 1991). Upper thermal preferences have been reported as 23.1°C (Deacon et al., 1987). Rinne (1971) found Virgin spinedace most frequently in pools with some type of protection such as undercut banks, boulders or debris; however, variations in habitat preferences have been noted. For example, in Beaver Dam Wash, Virgin spinedace utilize narrow, shallow runs with large amounts of emergent vegetation, while in North Fork of the Virgin River, they most often occupy quiet pools (Rinne, 1971). Virgin spinedace have also been documented to prefer shear zones between high (100 cm/sec) and low (10 cm/sec) velocities containing cover (Deacon et al., 1979; Deacon et al., 1991; Hardy et al, 1989). Nursery habitat preferences, however, remain unclear.

Virgin spinedace are primarily insectivorous, feeding on a wide range of insects and occasionally plant material and organic debris (Angradi et al., 1991; Gregor and Deacon, 1988; Rinne, 1971). Virgin spinedace feed on drifting prey in midwater and at the surface. Usually they maintain equilibrium in the midwater column darting to the surface to capture prey in a manner similar to drift-feeding salmonids (Addley and Hardy, 1993; Rinne, 1971).

**Historic Distribution**

The historic distribution of the Virgin spinedace is not well documented. Holden (1977) speculated that historic occurrence was in most of the clearwater tributaries and several mainstem reaches of southwestern Utah, northwestern Arizona, and southeastern Nevada (Figure 1). Museum records from the University of Nevada at Las Vegas, Brigham Young University, University of Michigan Museum of Zoology, and the United States National Museum support Holden (Addley and Hardy, 1993; Cross 1975; Rinne, 1971; Valdez et al., 1991). The earliest survey records indicated this species was common in the Santa Clara River and North Fork of the Virgin River, but probably less common in the Virgin (Tanner 1932, 1936). C.L. Hubbs (unpub. data) collected Virgin spinedace near Bunkerville, Nevada, in 1938, but surveys in 1942 in the same area lacked Virgin spinedace (Cross, 1975). Furthermore, the species was absent from surveys below Littlefield, Arizona between 1942 and 1975 (Cross 1975).
PROBLEMS FACING THE SPECIES

Populations of Virgin spinedace currently exist in the mainstem Virgin River and eleven of its tributaries including East Fork Virgin River, Shunes Creek, North Fork Virgin River, North Creek, La Verkin Creek, Ash Creek, Santa Clara River, Beaver Dam Wash, Coal Pits Wash, Moody Wash and Magotsu Creek (Table 1). According to Addley and Hardy (1993), the largest populations are in the upper mainstem above Quail Creek diversion and in drainages of the Santa Clara River and Beaver Dam Wash. Small populations exist in Ash Creek, La Verkin Creek, and the lower mainstem below Pah Tempe Springs. The remaining areas contain intermediate sized populations.

The present distribution of Virgin spinedace is significantly smaller than historically, with approximately 37-40% (84 km/52 mi) now unoccupied (Table 1). In addition, 24% of currently occupied habitat has experienced some degree of adverse modification (Table 1). Dewatered streams, water depletions, introductions of non-indigenous fish, and habitat degradation through agricultural and recreational uses have been identified as the primary factors involved in the reduction of range of the species (Valdez et al., 1991; Addley and Hardy, 1993).

In 1994, the FWS described pertinent problems and threats they perceived as facing the Virgin spinedace based on criteria for federal listing as required by Section 4(a)(1) of the ESA (59 FR 25875). The threats they listed do not necessarily reflect the view of all signatories to this Agreement. The following discussion summarizes the significant threats to Virgin Spinedace that will be addressed by conservation actions identified in this Strategy.

Present or threatened destruction, modification, or curtailment of its habitat or range.

Virgin spinedace habitat modification and/or elimination has occurred primarily through human activities such as dam and diversion construction, water depletion or diversion, and agricultural practices (Table 1). Approximately 7 km (4 mi) of Virgin spinedace historical habitat has been inundated by reservoirs including Quail Creek Reservoir on Quail Creek, Gunlock on the Santa Clara River, and Schroeder Reservoir on Beaver Dam Wash (Figure 1). Approximately 60 km (37 mi) of historic habitat has been dewatered by diversions. Furthermore, diversions have depleted water in approximately 31 km (19 mi) of currently occupied habitat. Lack of stable instream flows and low water levels as a result of diversions cause changes in water temperature, affect aquatic vegetation, and alter water chemistry and dissolved oxygen levels. Dams and diversions also act as barriers to fish movement within the system and fragment Virgin
spinedace habitat and populations. In areas of extensive habitat fragmentation, migration becomes virtually non-existent.

Agricultural practices have also modified several areas of Virgin spinedace habitat through alteration of the riparian zone. Riparian alterations often cause stream bank erosion, siltation, and devegetation. A recent evaluation of the Virgin River basin riparian zone (Fridell, Hansen, Leary, and Douglas, pers. comm., 1994) indicated that some alterations from crop production are occurring along lower La Verkin Creek, lower Ash Creek, and middle Virgin River reaches. Several reaches are impacted by livestock, including the Santa Clara River below Gunlock Reservoir, lower Santa Clara River, lower North Creek, lower La Verkin Creek, lower Ash Creek, and portions of the Virgin River mainstem. The remaining riparian zones appear to be relatively intact.

Predation, Competition, and Disease

Aquatic species introduced into the Virgin River system have been identified as contributing to reductions of native fish populations (Addley and Hardy, 1993; USFWS, 1993). Several non-indigenous fish species have been identified as occupying the same habitat as Virgin spinedace (Table 2). Several of these prey on the Virgin spinedace. Other non-indigenous species (Table 2), such as crayfish (i.e., Astacidae), may be preying on larval and young-of-year life stages in lower reaches of several tributaries (Addley and Hardy, 1993). Some non-indigenous species may also affect Virgin spinedace habitat by competing for limited resources such as food and space. Disease and parasites do not appear to have had significant roles in the declining status of the Virgin spinedace; however, they may have adverse effects when coupled with other threat and stress factors (Addley and Hardy, 1993).

Other natural or manmade factors affecting the species' continued existence.

Several other natural and manmade factors play a role in the declining status of the Virgin spinedace. Natural limiting factors include drought, flood and in some instances, natural barriers and native species interactions. The extent that natural factors affect Virgin spinedace is unclear.

Pollution from return flows, municipal drains and agriculture is a potential problem for all native species within the basin. Return flows from municipal drains and agriculture can make up a significant portion of a stream's total flow. Water from these return flows can be polluted with pesticides as well as other wastes. Mining along Beaver Dam Wash may contribute to habitat degradation. Low flows, caused naturally or by diversions, increase the impacts of pollution, erosion, siltation and mineral
springs have on the chemical composition of the water.

Recreational use (e.g. off-road vehicles) has been documented (Fridell et al., pers comm.) as significantly impacting several reaches including the Santa Clara below Gunlock Reservoir, the lower Santa Clara, and the lower mainstem Virgin River.
CONSERVATION ACTIONS TO BE IMPLEMENTED

Conservation measures needed for the continued existence of Virgin spinedace focus on two objectives: 1) to eliminate significant threats or reduce those that cannot be completely eliminated to the maximum extent possible, and 2) to stabilize, restore and enhance specific reaches of occupied and unoccupied historic habitat. The goal of these measures is to expand the range so that the species occupies at least 80% (approximately 181 km/112 mi) of its historically occupied habitat. Attainment of the goal and objectives of this strategy would be achieved by implementing the following management actions: 1) establish existing conditions as a baseline 2) re-establish population maintenance flows 3) enhance and maintain habitat 4) selectively control non-indigenous fish 5) maintain genetic viability; 6) monitor populations and habitat and 7) develop a mitigation plan and protocol for future activities.

Establish Existing Conditions As A Baseline

All management actions associated with the conservation of Virgin spinedace will be evaluated as to their effectiveness. In addition, any modification to the existing conditions upon which Virgin spinedace depend, will be evaluated as to their potential effect on the species. For these purposes, the existing conditions of historic habitat are considered to be this baseline. Three primary attributes will be used to describe existing conditions: 1) basin hydrology averaged over the last 20 years, 2) water rights and depletions, and 3) Virgin spinedace populations.

Re-establish Population Maintenance Flows

Existing flow patterns provide the habitat requirements of the Virgin spinedace in approximately 159 km (99 mi) of the species historic habitat (Table 1). These conditions are described by hydrographs in terms of flow quantity, timing, duration, and frequency. In approximately 91 km (57 mi) of historic habitat, stream channels are dry or flows are significantly depleted during the late-summer and early-fall period (Table 1).

Population maintenance flows will be re-established and maintained in approximately 39 km (24 mi) of de-watered historic habitat of the Virgin spinedace in order to reduce habitat fragmentation and to restore populations. These flows will be re-established based on determining the flow requirements of the species using an empirical approach by incorporating components of the conceptual framework outlined by Hill et al. (1991). This empirical approach incorporates current data on flow patterns that are currently maintaining self-sustaining populations in reaches of the Virgin River basin. The process of re-
establishing flows adheres to the following step-wise outline: 1) Estimate population maintenance flows, 2) Provide population maintenance flows, 3) Evaluate population maintenance flows, 4) Finalize flows required, and 5) Protect flows.

Estimate Population Maintenance Flows

Population maintenance flows currently occur in approximately 15 occupied stream reaches (Table 3). These flows were estimated by comparing Virgin spinedace population numbers, stream flows, and habitat characteristics throughout the drainage for empirical relationships (Addley and Hardy, 1993; Valdez et al., 1991). A total of 10 reaches have been identified as potential sites for population maintenance flow re-establishment to reach the goal of 80% of historic habitat (Tables 3 and 4). These reaches were selected because they were identified as areas that are dewatered or experience significant depletions (Table 1). Two reaches have been designated as priority areas toward attaining the goal. The first encompasses approximately 31 km (19 mi) of the Santa Clara River between Gunlock Reservoir and the confluence with the Virgin River. The second encompasses approximately 5 km (3 mi) of the Virgin River between Quail Creek Diversion and Pah Tempe Springs. Historically, these areas supported common to abundant populations of Virgin spinedace. Additional reaches of Virgin spinedace habitat to have flows restored will include one or a combination of the other reaches listed in Tables 1 and 4.

Evaluate Population Maintenance Flows

The response of Virgin spinedace populations and habitat to population maintenance flows will be evaluated over a five year period. A detailed study plan will be developed for each stream reach. The study plan will include, but not be limited to, estimations of population abundance, recruitment, habitat utilization and availability. A progress report will be provided annually. A completion report will be provided at the end of the five year period.

Finalize Population Maintenance Flows Required

A final recommendation for re-establishing population maintenance flows in specific reaches will be developed after completion of the population maintenance flow evaluations. Information obtained from other instream flow studies will be considered in making those recommendations. In the Santa Clara River, the maximum amount of flow provided will not exceed 3 cfs at the point of release.

Protect Population Maintenance Flows

Flow protection measures will be implemented that are consistent with state laws. These measures may include:
agreements, minimum instream flow rights, irrigation rights, and federal reserved water rights. Instream flows for water-related resource attributes, including native fish, are currently being discussed by the National Park Service, the State of Utah, and the Washington County Water Conservancy District. These discussions are part of ongoing negotiations to determine Federal reserved water rights for Zion National Park in the Virgin River adjudication.

**Enhance and Maintain Habitat**

Habitat enhancement procedures will be implemented in approximately 26 km (16 mi) of occupied habitat. Enhancement projects will focus on specific factors that contribute to Virgin spinedace habitat degradation including: agricultural activities, mining activities, recreational use of riparian zones, and activities that affect water quality (Table 4). Enhancement projects will include maintenance and construction of boundary-line fences between federal and private parcels to control unauthorized grazing and recreational (ie: ORV, hiking, etc.) use along the riparian zones, establishment of intensive grazing management programs for federal lands along streams, and development of barriers and conservation easements within the Virgin River floodplain to reduce additional agricultural, recreational, and developmental impacts. Any future projects which alter habitat will be evaluated as described in the mitigation section of this strategy.

**Selectively Control Non-indigenous Fish**

Non-indigenous fish populations identified in Table 2 will be evaluated in order to identify detrimental effects on Virgin spinedace populations. Management and control of non-indigenous fish will focus on implementation of stocking and introduction procedures as well as control and/or eradication of selected populations of these fish in the Virgin River basin. Specific management actions will be developed on a reach-by-reach basis to remove the threats to Virgin spinedace associated with non-indigenous species. Table 4 summarizes reaches where non-indigenous fish management actions will be implemented.

**Control Fish Stocking and Introductions**

The following basin-wide procedures for controlling stocking, introduction, and spread of non-indigenous aquatic species of vertebrates and invertebrates will be implemented by the appropriate agencies. These procedures have been developed using adapted versions of The American Fisheries Society procedures for nonnative fish introductions.
Stocking of Non-indigenous Species Already Occurring:

**SALMONIDS:**
Several species of salmonids are routinely stocked in the Virgin River Basin. Stocking of salmonids is to be restricted to areas in association with existing salmonid populations OR made in new areas only where they will not conflict with native species of special concern. Areas where salmonids are routinely stocked are presented in Table 5.

- **Rainbow Trout** (*Onchorhynchus mykiss*)
  New stockings are prohibited where self-sustaining populations would establish in association with native fishes of special concern or where stocking would cause conflicts with native species of special concern.

- **Brown Trout** (*Salmo trutta*)
- **Brook Trout** (*Salvelinus fontinalis*)
- **Cutthroat Trout** (*Onchorhynchus clarki*)
- **Other Hybrid Trout**
  Stocking is prohibited in areas under 5,000 feet elevation or at higher elevations where stocking would cause conflicts with native species of special concern. The only area where maintenance stocking of brown trout occurs in the Virgin River basin is upstream from Glendale, Utah in the East Fork of the Virgin River (Table 5).

**OTHER NON-INDIGENOUS SPECIES:**

- **Channel Catfish** (*Ictalurus punctatus*)
  Stocking is prohibited except in isolated ponds and reservoirs as determined on a case by case basis.

- **Largemouth bass** (*Micropterus salmoides*)
- **Bluegill sunfish** (*Lepomis macrochirus*)
  Stocking to be restricted to standing water impoundments, including existing mainstream reservoirs and other isolated ponds and reservoirs. Direct conflicts with native fish species of special concern will be avoided.

**Introduction of a New Species:**
Guidelines for introducing a new species to the drainage will follow the "Introduction of Aquatic Species, Environmental Policy Statement of the American Fisheries Society" and the "Non-indigenous Aquatic Nuisance/Prevention and Control Act of 1990".

**Prohibited Species:**
Non-indigenous minnows (Family: Cyprinidae), smallmouth bass (*Micropterus dolomieni*), green sunfish (*Lepomis cyanellus*), black crapple (*Pomoxis nigromaculatus*), all crayfish species (i.e., *Astacidae*) and all other non-indigenous aquatic species prohibited by respective state regulations or recommended for prohibition by the Colorado River Wildlife Council.
Selective Removal of Non-indigenous Fish

Eradication of detrimental non-indigenous fish will be implemented where feasible and controlled to the maximum extent possible where eradication is not possible (Table 4). Several species have already been targeted for control and/or eradication including rainbow trout in the upper reaches of Beaver Dam Wash, green sunfish from the Santa Clara River and red shiner in the mainstem Virgin River below the Washington Fields Diversion (see below for details). Engineering feasibility for fish barrier structures to control non-indigenous fish is currently being developed. Possible impacts to native species will be evaluated prior to implementation of control and eradication actions.

Upper Beaver Dam Wash:
NDOW will have lead responsibility for an interagency effort to re-introduce Virgin spinedace into historic habitat in Nevada below Schroeder Reservoir. Efforts will be focused on recreating the historic species matrix which occurred in this reach prior to dam construction, through selective removal of rainbow trout from the reach below Schroeder Reservoir. Virgin spinedace will be obtained from other populations within the Beaver Dam Wash drainage. The anticipated date of re-introduction will be early summer 1995 following the normal peak spring runoff period for upper Beaver Dam Wash. NDOW will provide pre-project assessments, documentation and monitoring of re-introduction efforts.

Santa Clara River:
UDWR will initiate efforts to control and manage green sunfish in the Virgin River basin in ways to benefit native fishes, including Virgin spinedace. The feasibility of chemical renovation projects in the Santa Clara River drainage will be evaluated in respect to controlling or eliminating green sunfish and other exotic fishes that are determined to be a problem.

The overall project will be divided into workable segments that can be treated separately. For example, if upstream sources of green sunfish can be eliminated above Baker Reservoir then, in turn, the stream segment between Baker Reservoir and Moody Wash could be renovated to remove exotic fishes. Providing that upstream treatments are feasible, this area could also be isolated from contamination by exotic fishes from downstream sources. Other project segments could include Moody Wash downstream to Gunlock Reservoir, and from Gunlock Reservoir downstream to the confluence of the Virgin River.

Control of green sunfish in the Santa Clara River below Gunlock Reservoir might be necessary after population maintenance flows are established. In this case, chemical treatments to temporarily reduce exotic fish while Virgin spinedace are re-introduced and become established might be needed. Such work
could be conducted regardless of upstream occurrence of non-indigenous fishes.

**Virgin River:**
Attempts to eradicate the red shiner from the Virgin River basin, particularly from the Washington Fields diversion downstream to the Mesquite diversion, have been conducted in the past. Though these attempts were not 100% effective, they were successful at eliminating red shiners between Washington Fields and Johnson diversions. These attempts included construction of fish barriers and chemical treatments with the pesticide rotenone.

Chemical procedures to eradicate red shiners will be implemented in 1995 and followed up by subsequent treatments as needed. General chemical treatment methodology will involve 1) approximately 20 drip stations where rotenone will be introduced into the river, 2) spraying Noxfish in standing water areas along stream channels, 3) detoxifying the rotenone in the Virgin River with potassium permanganate. Temporary fish barriers will be constructed in Utah at strategic sites in 1995 to prevent upstream migration of red shiners. These barriers will also assist in dividing the chemical treatments into manageable treatment areas.

**Maintain Genetic Viability**
Protocols for introduction, re-introduction, and sub-basin transfer of Virgin spinedace will be established and utilized.

**Population and Habitat Monitoring**
Virgin spinedace population and habitat monitoring will be implemented. Information obtained from the monitoring process will be used to determine if current management actions are attaining the objectives set forth in the Conservation Agreement. In addition, a general assessment of the overall response of other species occurring in the Virgin River basin will be conducted.

Population and habitat monitoring will be implemented cooperatively by participating Virgin Spinedace Conservation Team (VSCT) personnel. VSCT responsibilities regarding monitoring actions are described in Table 3 of the accompanying Conservation Agreement. Protocols for monitoring will be similar to those established by the Virgin River Recovery Team. A general overview of the methodology is presented below.

**Monitoring Plan Methodology**
A minimum of 10 stations will be chosen as monitoring points throughout the basin. Once re-establishment procedures have been completed, the number of stations established may increase to include the new areas. Sampling will be conducted annually in
the fall.

Seining will consist of repeated hauls of a 4.6 meters wide x 1.8 meters deep x 3.2 mm mesh seine until depletion (the number of fish captured in a haul is 10% or less of the highest seine catch for that sample site). Samples will be taken from preferred Virgin spinedace microhabitats approximately 10 meters in length. In areas where seining is not feasible, electrofishing methods will be incorporated. These repetitive techniques will primarily provide that the population in a given habitat has been thoroughly sampled. It secondarily provides depletion information for population estimates.

All native fish will be identified to species, counted, measured, and returned to site of capture. All non-indigenous fish will be identified to species, counted, measured and returned to site of capture.

In addition to the sampling described above, Virgin spinedace population information will be obtained from data acquired in the bi-annual sampling by the Virgin River Recovery Team.

Data obtained on responses of populations and habitat to management actions from the monitoring process will be assessed and evaluated annually by the Virgin spinedace conservation team. The effectiveness of the management actions will be measured using empirical criteria to be established for this Strategy.

Develop Mitigation Plan and Protocols for Future Activities

A mitigation plan and protocols for mitigating future activities will be developed during 1995. Any new water depletion or habitat alteration of baseline conditions of historic habitat will require prior evaluation, assessment, and approval. Mitigation will be determined based on an evaluation of how baseline conditions would be altered. During 1995, methodologies for conducting this evaluation will be developed. The evaluation will incorporate procedures for determining flow requirements by integrating components of the conceptual framework outlined by Hill et al. (1991).

Descriptions of existing flow patterns will probably include details on the timing, duration, magnitude, slope, and frequency of high-flow events in selected streams along with analyses to determine an average annual hydrograph for timing and slopes of rising and falling limbs. The HEC-2 analysis (U.S. Army Corps of Engineers 1982) may be used to estimate bankfull flows. A frequency-of-occurrence curve may be required to describe the return period for peak flows. A flow duration curve may also be required to describe the flow duration associated with specific exceedence values.
DESIRED OUTCOME

Implementation of the Conservation Agreement and Strategy will initiate management actions that should provide for the continued existence and recovery of Virgin spinedace. We anticipate that the range of the species will be increased to occupy 80% of its historic habitat (Figure 2). The most significant threat to the species has been identified as dewatered-historic habitat (60 km or 37 mi). This threat will be significantly reduced by providing flows in approximately 39 km (24 mi) of stream channel. We anticipate that this single action will greatly enhance current populations of Virgin spinedace by reducing habitat and population fragmentation, enhancing stream productivity, enhancing water quality, and enhancing the riparian communities. Actions such as non-indigenous fish management and habitat improvement should provide additional benefits by removing negative fish interactions and enhancing impacted habitats.

a These flows will be measured at the point of release where dams and diversions exist
b Instream flows for water-related resource attributes are currently being discussed by the NPS, the State of Utah, and the WCMD. These discussions are part of ongoing negotiations to determine Federal reserved water rights for Zion National Park in the Virgin River adjudication.

AGREEMENT AMONG UTAH DIVISION OF WILDLIFE RESOURCES, WCWCD, AND LOWER GUNLOCK REGARDING CONTROL OF WATER FROM THE CONSERVATION POOL IN GUNLOCK RESERVOIR
AGREEMENT

This Agreement is entered into by and between the Lower Gunlock Reservoir Corporation, a Utah non-profit mutual water company ("Corporation"), the Utah Division of Wildlife Resources ("Division"), and the Washington County Water Conservancy District ("District").

Recitals

A. The Corporation and the Division entered into a written Contract dated March 20, 1970 for the joint financial participation, construction and use of the Gunlock Reservoir located on the Santa Clara River in Washington County, Utah, providing among other things a contractual right for a sport fishery conservation pool in said Reservoir for the benefit of the Division.

B. The March 20, 1970 Contract was amended and superceded by an Amended Contract dated June 10, 1981 whereby the parties reallocated the fish conservation pool and active storage pool in Gunlock Reservoir. A copy of the 1981 Amended Contract is attached hereto as Exhibit A and incorporated by reference herein.

C. The parties wish to implement the Santa Clara Project Agreement which is intended to:

1. Conserve water and provide more dependable supplies for water users below Gunlock Reservoir;
2. Settle the water right claims of the Shivwits Band of Paiute Indians; and,
3. Provide certain instream flows in the Santa Clara River below Gunlock Reservoir for the Virgin River Spinedace.

A copy of the Santa Clara Project Agreement is attached hereto as Exhibit B and incorporated by reference herein.
D. As required by Paragraph 8.1 of the Santa Clara Project Agreement, and in order to implement that Agreement, it is necessary for the parties to reallocate a portion of the Division's fish conservation pool in Gunlock Reservoir in order to help provide instream flows for the Virgin River Spinedace below Gunlock Reservoir in the Santa Clara River.

NOW, THEREFORE, in consideration of the mutual covenants and conditions contained herein, and for other good and valuable consideration, the parties mutually agree as follows:

1. The Division hereby relinquishes its contractual right to the first 1,086 acre-feet of water in its existing fish conservation pool in Gunlock Reservoir which was heretofore granted in Exhibit A. The Division shall retain the right to all remaining portions of the fish conservation pool and the sediment pool in Gunlock Reservoir, to be used for sport fishery purposes as provided in Exhibit A.

2. The contractual right to the use of 1,086 acre-feet of water in the fish conservation pool relinquished by the Division shall be assigned by the Corporation to the District and may be used by the District for any project purpose under the Santa Clara Project Agreement, including but not limited to providing instream flows below Gunlock Reservoir.

3. To fully compensate the Division for its relinquishment of 1,086 acre-feet from the fish conservation pool in Gunlock Reservoir, the District shall provide the Division with a perpetual sport fishery conservation pool of 1,086 acre-feet in Sand Hollow Reservoir.

4. Under no circumstances shall the release of water from Gunlock Reservoir for any Santa Clara Project uses, or otherwise, diminish the Division's remaining conservation pool rights in the Reservoir, except as may be provided in Exhibit A.

5. Any and all water released from or bypassed through Gunlock Reservoir for instream flow purposes for the Virgin River Spinedace shall be used by the Division pursuant to the Santa Clara
Agreement. The Division shall file with the Utah State Engineer an instream flow change application, pursuant to § 73-3-3, Utah Code Annotated, to preserve those flows for their intended purpose. However, the obligation to release water required for instream flows under the Santa Clara Project Agreement shall not be an obligation of the Division, but is an obligation of the Corporation and/or the operator of the Santa Clara Project, pursuant to the Santa Clara Project Agreement.

6. The parties shall cooperate in and do any act or thing and execute any and all instruments or applications required by this Agreement and which are necessary and proper to make effective the provisions of this Agreement.

7. This Agreement shall be effective and enforceable only after all of the following have been accomplished:

   (a) The execution of this Agreement by the parties hereto;

   (b) The approval of this Agreement has been secured in writing by the Sport Fishery Section of the United States Fish & Wildlife Service;

   (c) The Santa Clara Project Agreement (Exhibit B) becomes effective and enforceable as provided for in ¶ 11.0 of the Santa Clara Project Agreement; and,

   (d) The funding for the Santa Clara Project has been secured and is available to construct that Project.

8. The Amended Contract of June 10, 1981 (Exhibit A), unless inconsistent with this Agreement, shall remain in full force and effect.
DATED this 15\textsuperscript{th} day of January, 2001

LOWER GUNLOCK RESERVOIR CORPORATION

By: ____________________________

UTAH DIVISION OF WILDLIFE RESOURCES

By: ____________________________

WASHINGTON COUNTY WATER CONSERVANCY DISTRICT

By: ____________________________
AMENDED CONTRACT

THIS AGREEMENT is made and entered into this 15th day of January, 1981, by and between the LOWER GUNLOCK RESERVOIR CORPORATION, a Utah non-profit mutual water company, hereinafter referred to as the "Corporation", and the UTAH DIVISION OF WILDLIFE RESOURCES, a body politic of the State of Utah, hereinafter referred to as "Division".

WITNESSETH:

WHEREAS, the parties entered into a written contract of March 20, 1970 for the joint financial participation, construction and use of a water storage reservoir to be located on the Santa Clara River in Washington County, State of Utah, a copy of which is attached hereto and incorporated by reference herein; and,

WHEREAS, although the agreement of March 20, 1970, has been fully executed and both parties have fully performed thereunder, there is disagreement among the parties relative to the interpretation of the certain provisions of the contract and the use of 580 acre-feet of storage capacity which was in excess of the original designed capacity of the reservoir and not addressed in the original contract, and, the allocation of sedimentation losses due to the fact that sedimentation has occurred in areas of the reservoir unanticipated by the parties; and,

WHEREAS, the parties are currently involved in litigation in the Fifth Judicial District Court in and for Washington County, Civil No. 7090, in which the parties hereto seek a declaratory judgment of the Court regarding their respective rights, duties, and obligations under the above-referenced contract, which governs the operation of the reservoir and the use and release of waters therefrom; and,

WHEREAS, the Division desires to improve the fishery within the Lower Gunlock Reservoir, which requires that the surface level of the reservoir be stabilized during the late spring and early summer of each year, which stabilization
program was not part of the original contractual agreement between the parties; and,

WHEREAS, the parties desire to fully resolve their present disputes, and to provide for an improved fishery by hereby amending the existing contract. This amended contract shall supersede the above-referenced agreement, and shall hereafter control the rights, duties, and obligations of the parties and the pending lawsuit shall be dismissed upon the grounds that the dispute therein has been hereby settled.

NOW, THEREFORE, in consideration of the mutual covenants and conditions herein contained, and the dismissal of the above pending litigation, the parties mutually agree as follows:

1. Representations of the Parties.

The parties mutually agree and acknowledge that both parties have fully complied with all of the covenants and conditions contained in the agreement of March 20, 1970, regarding the funding and construction of the reservoir; securing the required approvals of the State Engineer for the segregation and change of nature and place of use; to provide the required water for the maintenance of a 1,500 acre-foot sedimentation pool, a 2,300 acre-foot fish conservation pool, and a 7,080 acre-foot irrigation pool in accordance with the allocations set forth in this agreement, for the application for and the obtaining of Federal construction grants to assist in the financing of the construction of the Lower Gunlock Reservoir; and, that neither party is in default under any of the terms and conditions of the prior written agreement in any respect.

2. Allocation of Actual Storage Space.

The reservoir as constructed has 10,880 acre-feet of storage space before siltation, which space shall be allocated between the parties as follows:

(a) The bottom 1,500 acre-feet of storage space shall be set aside as dead storage capacity for use as a
sedimentation pool, and the water stored therein shall not be available for withdrawals by either party;

(b) The Division shall have the exclusive right to the use of the 2,300 acre-feet of storage space for the maintenance of a permanent fish conservation pool, which water has been provided for by the Corporation from its vested water rights. Additionally, the Division shall have the right to utilize all of the water stored in the reservoir specifically including the sedimentation pool as set forth in subparagraph (a) hereof for fish culture purposes, subject to the Corporation's rights to withdraw its water from the irrigation pool as set forth in subparagraph (c) hereof in accordance with the needs of its shareholders.

(c) The Corporation shall have the exclusive right to use the 7,080 acre-feet of active storage space, which shall be comprised of the 6,000 acre-foot space originally allocated to the Corporation, plus all of the additional 580 acre-feet of storage capacity created through the construction of a larger reservoir plus 500 acre-feet out of the original 2,000 acre-foot sedimentation pool which pool by agreement has been reduced to 1,500 acre-feet as set forth in subparagraph (a) hereof;

3. Allocation of Existing Sedimentation Loss.

The Lower Gunlock Reservoir has been in operation approximately eight years, and during that period of time substantial amounts of sediments have been deposited within the reservoir, reducing the actual storage capacity by approximately 500 acre-feet. The parties agree to allocate the existing sedimentation loss in proportion to their allocated storage space in the reservoir. Accordingly, the Corporation shall reduce its active storage by 300 acre-feet, which will leave 6,780 acre-feet of available storage capacity. The Division shall similarly reduce its allocated storage space by 200 acre-feet, which will leave the Division with 2,100 acre-feet of available storage capacity in its fish pool.

The parties agree to the establishment of a minimum surface elevation or contour line for the purpose of defining and separating the permanent dead storage pool and the fish conservation pool from the Corporation's active irrigation storage pool. The original minimum surface elevation of 3,554 feet provided for in the original contract is hereby adjusted and established at 3,548 feet above sea level. This new minimum surface elevation represents the present allocation of storage space as set forth in paragraph 2 above, as adjusted to reflect the existing sedimentation losses as allocated in paragraph 3 above. This 3,548 foot contour line is intended to insure that there will exist below that minimum contour line 1,500 acre-feet within the sedimentation pool and 2,100 acre-feet in the fish conservation pool. The water stored in the reservoir above this minimum contour line shall represent the 6,780 acre-feet of water owned by the Corporation in accordance with allocations of paragraph 2 and 3 hereof. The water stored below the minimum contour line shall represent the 1,500 acre-feet of water held in dead storage within the sedimentation pool, and, the 2,100 acre-feet of water reserved for use by the Division in accordance with the allocations of storage space and existing sedimentation set forth in paragraphs 2 and 3 above. The minimum contour line shall be subject to periodic adjustments for siltation, as provided for in paragraph 6 hereof.

5. Maintenance of the Minimum Surface Elevation.

The Corporation agrees that it will not withdraw water from the reservoir so as to lower the surface elevation below the prevailing minimum contour line as established from time to time, except that the Corporation shall be entitled to drain the reservoir in accordance with the lawful directions of the State Engineer or the State of Utah or any other governmental entity having jurisdiction over the dam itself;
provided that any water withdrawn below the minimum surface elevation established as of the date of the withdrawal in accordance with lawful instructions from the State Engineer or other such governmental entity, shall be replaced through the storage of natural flows by the Corporation within a reasonable time and without cost to the Division.

Future sedimentation losses shall be allocated to the parties in accordance with the following formula:

(a) All sedimentation actually deposited into the sedimentation pool space shall be allocated totally (100%) to the Division.

(b) Any sedimentation actually deposited into the fish conservation pool shall be shared one-half by the Corporation and the other one-half by the Division.

(c) Actual sedimentation deposited in the irrigation storage pool shall be allocated a one-third to the Division and two-thirds to the Corporation.

The parties acknowledge that these fractional shares are not in exact proportion to their actual allocated share of the reservoir's storage capacity, but they have agreed to this fractional division for the ease of administration. The actual storage capacity of the parties shall be reduced and the contour line established by paragraph 4 hereof shall be readjusted to reflect the increased actual sedimentation losses. Should the minimum elevation require adjustment, the adjusted level shall be calculated by the engineer chosen by the parties to conduct the siltation surveys as set forth in paragraph 7 hereof, and such new minimum elevation shall be set down in writing and attached as an amendment to this agreement.

Additional sedimentation will occur within the reservoir as a natural result of the operation of the reservoir and the impoundment of waters. The parties believe it generally will be desirable to conduct a sounding study at five (5) year
intervals to determine the extent of additional sedimentation encroachment and the location of the same, and thus to determine the loss of additional storage capacity, and to allocate the additional sedimentation losses between the parties in accordance with the provisions of paragraph 6 above.

Accordingly, the parties agree that the minimum elevation line established in paragraph 4 hereof shall hold for the next five years from the date hereof. Upon conclusion of the this five year period, a sounding study will be conducted by an engineer mutually acceptable to the parties. The costs thereof shall be paid 60% by the Corporation and 40% by the Division. The minimum contour line will then be adjusted as provided for herein to meet the actual conditions as determined by the sounding study.

(a) Sounding studies will then be repeated at five year intervals at the joint and agreed proportionate expense of the parties as provided above.

(b) If the parties mutually agree that such a study is not required at the end of any given five year interval, then the study for that period of time can be mutually waived; provided however, that if either party wants to have the five year study done at that time, the study will be conducted at the joint and proportionate expense of the parties as set forth above.

(c) If either party believes that sedimentation is occurring more heavily in its allocated storage space, then the entity complaining shall be entitled to request a sedimentation study to be conducted earlier than the required five year intervals, but in that event, the study shall be conducted at the sole expense of the party requesting it. If such an earlier study is made by an engineer mutually agreeable to the parties, the contour line and space allocations will be adjusted at that time and shall remain fixed at this level for the next five years or until another study is made in accordance with the terms hereof. In no event shall
the minimum surface elevation be adjusted more often than on an annual basis.

8. Stabilization.

The Division wishes to enhance its fishery in the Lower Gunlock Reservoir. The fish eggs are generally laid near the surface of the reservoir, and have a tendency to follow the water level upwards if there is any increase in the amount of water stored in the reservoir. The eggs, however, will not follow the water downward if it recedes in the reservoir, and thus if any substantial quantity of water is withdrawn during the spawning period, the eggs are left exposed to the natural elements and may not hatch. The parties therefore acknowledge that the fish in the reservoir require a relatively stabilized condition during the spawning period, which season will fluctuate annually as a result of weather conditions and water temperatures.

The parties also acknowledge that the primary benefit of a storage water reservoir is the ability to utilize water in storage during drought conditions. The parties therefore acknowledge that it is not economically practical for the corporation to be precluded from using its stored water during drought conditions.

The parties therefore agree that the Division shall, upon reasonable notice to be given by May 1st, have the right to annually designate a three week period which must fall within the time period of May 7th through June 13th of each year, and which shall in any event end as of June 13th of each year, during which time the surface elevation of the reservoir will be maintained at a stable level, subject to the following terms and conditions:

(a) During normal or wet water years, which is defined as those years when the natural inflow to the Lower Gunlock Reservoir during the May 7th-June 13th period always equals 15 cfs or more, that the Corporation may make withdrawals from the reservoir, but the outflow from the reservoir shall not exceed the total quantity of water
flowing into the reservoir from the Santa Clara River and all other sources during the agreed three week stabilization period. In other words, the Corporation shall not make withdrawals from storage (as distinguished from use of inflow) when the inflow to the reservoir from the Santa Clara River and all other sources is 15 second-feet or more.

(b) During drought conditions, or other periods of natural or manmade shortages reasonably beyond the control of either party, defined as that period of time during the May 7th-June 17th period when the inflow to the reservoir is less than 15 second-feet, then the Corporation shall have the following rights:

(i) To withdraw an amount equal to all the natural inflow to the reservoir, and in addition, the Corporation shall have the right to make withdrawals from its water previously stored in the reservoir (but only to the extent provided for herein) in order to augment the natural inflows of the stream during the selected stabilization period.

(ii) The rate at which the corporation shall make any such withdrawal from storage shall be within the sole discretion of the Corporation; provided however, that the Corporation shall not during the designated stabilization period drawdown the surface elevation of the reservoir more than a total of one and one-half vertical feet from the elevation line existing as of the start of the designated three week stabilization period.

(iii) During periods of drought when the stream is flowing less than 15 cfs, it is acknowledged that the Corporation may obtain better irrigation efficiency by storing the inflows and then releasing the natural flows, plus some stored water, to provide a larger irrigation stream during periods of use. It is thus agreed that the Corporation may store the inflow during the stabilization period. However, if such storage builds up the elevation of the reservoir above the elevation which existed at the time
the designated stabilization period starts, the drawdown from such increased storage elevation will not be more than one and one-half vertical feet below any level reached which is above the level reached at the start of the stabilization period.

Thus, the elevation of the reservoir will be noted at the start of the designated season. If the stream drops below 15 cfs, the corporation can withdraw an amount equal to the inflow, plus stored water, so long as the combined withdrawals do not lower the reservoir elevation more than 18 inches. If the natural inflow is stored, so that the elevation goes up above the elevation at the beginning of the designated period, then the eggs will be inclined to follow the water upward, and the new elevation becomes the point from which the 18 inches must be measured.

(iv) The right to make withdrawals from storage shall continue only so long as the inflow to the reservoir is less than 15 second-feet, or until the stabilization period has terminated, which in no event shall run beyond June 13th of each year. Thus if at any time during the course of the stabilization period, the inflows should return to 15 second-feet or more, the right to make releases from storage shall cease. If the inflow shall again drop below 15 second-feet at any time during the stabilization period, the corporation shall again have the right to make releases from storage to augment the natural inflow, provided that the surface elevation of the reservoir is not drawdown below one and one-half vertical feet below the level of the reservoir when the natural inflow to the reservoir is less than 15 second-feet.

(c) Nothing contained herein shall preclude the Corporation from storing the inflow to the reservoir in excess of 15 cfs during the stabilization period for later release, even though the storage of additional water will increase the surface elevation of the reservoir.
(d) Upon conclusion of the stabilization period the Corporation shall resume normal operation of the reservoir in accordance with the needs of its shareholders and the terms and conditions of the agreement.

The Corporation shall pay all expenses for operation, maintenance, repair and replacement of the dam and reservoir and all appurtenant structures and facilities, and shall hold the Division free of liability of any nature whatsoever arising out of or in connection with the maintenance, operation, repair and replacement of the dam, reservoir and appurtenant structures and facilities. The Corporation shall have the right to operate the reservoir according to the needs of its shareholders, so long as the reservoir is not lowered below the applicable minimum elevation in accordance with the terms of this agreement.

Additionally, the Corporation will maintain sufficient water in storage at all times to provide the water necessary to replace evaporation, transpiration and seepage from the reservoir. Water required to replace evaporation, transpiration and seepage losses shall be in addition to the water required to maintain the fish conservation pool, less future sedimentation losses, as required by this agreement. Any water stored and not used to replace evaporation, transpiration and seepage losses, as segregated out from Application #11929, may be used for all other authorized purposes by the Corporation in accordance with its ownership interest as reflected herein.

The Corporation shall at all times provide free public access for ingress and egress to and from the dam and reservoir, and access to the entire shoreline and surface of said reservoir for fishing, hunting, boating and all other related activities. In the event the Corporation enters into an agreement with another entity to administer the land and water areas of the reservoir, said agreement shall contain
the language to permit the aforementioned free access to the shoreline and surface areas of the reservoir. In addition, several free public parking areas shall be provided contiguous to the reservoir, and their shall be no charge for the use of minimal facilities such as garbage cans and sanitary units which may be provided in other than major developed areas.

In the event either party defaults in the performance of the covenants and conditions herein contained, the defaulting party hereby agrees to pay all costs incurred in the enforcement of this agreement, including a reasonable attorney's fee, whether such enforcement comes through litigation or otherwise.

12. Notice.

Any notice to be given hereunder shall be given to the parties at the following designated addresses:

Lower Gunlock Reservoir Corporation
  c/o Rudger McArthur
  St. George, Utah 84770

Division of Wildlife Resources
  1596 West North Temple
  Salt Lake City, Utah 84116
  Attention: Don Andriano

The foregoing constitutes the full and complete agreement by and between the parties, and shall supersede all prior or oral or written agreements or representations of the parties, and shall specifically supersede a written agreement between these parties of March 20, 1970, and shall be binding upon the parties hereto and upon their heirs, successors, administrators and assigns.

IN WITNESS WHEREOF, the parties have hereunto set their hands the day and year first set forth above.

UTAH DIVISION OF WILDLIFE
RESOURCES,

By

Its Director
AGREEMENT

This Agreement is made and entered into this ___ day of January, 2001, between the Utah State Division of Wildlife Resources, hereinafter referred to as “the Division” and the Washington County Water Conservancy District, hereinafter referred to as “the District” for the establishment of a permanent fish conservation pool in the proposed Sand Hollow Reservoir in Washington County, Utah, which is to be construed, owned and managed by the District.

WHEREAS, the District is undertaking the construction of the Sand Hollow Reservoir in Washington County, Utah, for the impoundment of water from the Virgin River, and possesses sufficient water rights to impound in said reservoir; and

WHEREAS, by an agreement dated 15th January, 2000, the Division relinquished its contractual right to 1,086 acre feet of fishery conservation water in Lower Gunlock Reservoir on the Santa Clara River in Washington County, Utah, in order to facilitate the Santa Clara Project Agreement and the Shivwits Water Settlement Act enacted by Congress; and

WHEREAS, the Division and the District have heretofore agreed that the 1,086 acre feet of water relinquished by the Division in Lower Gunlock Reservoir is to be replaced by the District’s granting the Division a 1,086 acre feet fish conservation pool in the Sand Hollow Reservoir for fish and wildlife related purposes;

NOW, THEREFORE, in consideration of the mutual promises of the parties, it is hereby agreed as follows:

1. The District shall construct Sand Hollow Reservoir and provide the Division with a permanent fish conservation pool in said reservoir of 1,086 acre feet. The upper elevation of the conservation pool will be calculated within a reasonable time after the reservoir is constructed.
STATE OF UTAH
DEPARTMENT OF NATURAL RESOURCES,
By
Its Executive Director

APPROVED AS TO FORM:
ATTORNEY GENERAL, STATE OF UTAH,
By
Its Assistant Attorney General

LOWER GUNLOCK RESERVOIR
CORPORATION,
By
Its President
the extent water is withdrawn from the conservation pool by order of the State Engineer, it shall be replaced within a period of one year after repairs or maintenance are completed, provided the availability of water is sufficient to accomplish the replacement.

5. Any loss of storage capacity in Sand Hollow Reservoir due to sedimentation or siltation will be prorated between the Division and the District in proportion to their respective storage capacity rights.

6. The District and the Division shall work cooperatively to provide reasonable public access to the reservoir and will specify in the Sand Hollow Reservoir Operation and Recreation Plan those areas of the reservoir and adjacent shoreline that shall be open to the public.

7. The District shall exercise reasonable diligence and care to provide the conservation pool to the Division and shall not be liable for any damage or loss occasioned by any failure or interruption caused by a state of Force Majeure. For purpose of this Agreement, Force Majeure means acts of God, acts of public enemies, insurrection, riots, fires, explosions, drought, floods, earthquakes, strikes, emergency actions the District may be compelled to take to prevent serious injuries or death to persons, lawful orders or acts of civil or military authority, or other causes of similar nature.

8. The Division assumes no liability whatsoever for the operation, maintenance or repair of Sand Hollow Reservoir, or any of its features, and the Division shall not be liable for any claim of any nature whatsoever arising from the operation or maintenance of said reservoir by the District. As governmental entities, each party
2. The District shall be responsible for the preparation and filing of any necessary applications, permits and approvals for the Sand Hollow Project and shall prepare and process appropriate applications and instruments to obtain approval of the Utah State Engineer for the storage and maintenance, by the District, of said conservation pool, including, if necessary, an application for change in place or nature of use of said water. The Division shall cooperate in executing any appropriate instruments or applications necessary to facilitate gaining approval of the State Engineer for storage of the conservation pool.

3. The District shall retain the sole right to operate Sand Hollow Reservoir according to its needs, so long as the conservation pool capacity remains continuously available to the Division each and every year. The 1,086 acre feet of capacity for the conservation pool shall be stored within one year after final completion of reservoir construction, provided the availability of water is sufficient to accomplish such storage.

4. The Division will have exclusive use of the conservation pool in place for fish and wildlife purposes. The Division shall consult with the District regarding the species of fish that are stocked in the reservoir. The District agrees that it will not withdraw any water from the conservation pool in said reservoir to which the Division is entitled under this Agreement, and that it will continue to allocate from its water rights necessary water to offset losses to the conservation pool by seepage, transpiration or evaporation. The District will not incur liability for withdrawal of water from the conservation pool as may be required by the State Engineer for repairs to the reservoir or other purposes as may be determined by the State Engineer. To
shall be responsible and liable only for their own acts, omissions and negligence, and shall hold harmless the other therefore.

9. A copy of this Agreement shall be filed with the Utah state Engineer and the Washington County Recorder and shall constitute an encumbrance of the water rights of the District for the use of the 1,086 acre feet of water for the uses specified herein.

IN WITNESS WHEREOF, the parties execute this Agreement.

EXHIBIT B - ST. GEORGE WATER REUSE PROJECT DESCRIPTION
ST. GEORGE WATER REUSE PROJECT AGREEMENT

This Agreement is made and entered into on __________, 2001, by and among the City of St. George, Utah; the Shivwits Band of the Paiute Indian Tribe of Utah; the State of Utah; and the United States of America.

1.0 RECITALS.

1.1 On July 21, 1980, the State of Utah, pursuant to Title 73, Chapter 4, Utah Code Ann. as amended, initiated a statutory adjudication of water rights in the Fifth Judicial District Court of the State of Utah in and for Washington County, Civil No. 800507596, which encompasses all of the rights to the use of water, both surface and underground, within the drainage area of the Virgin River and its tributaries in Utah (“Virgin River Adjudication”), including the Santa Clara Drainage (“Santa Clara System”).

1.2 The United States was joined as a party in the Virgin River Adjudication pursuant to 43 U.S.C. § 666. On February 17, 1987, the United States filed a Statement of Water Users Claim asserting a water right based on state law and a federal reserved water right claim for the benefit of the Shivwits Band of the Paiute Indian Tribe of Utah.

1.3 The Santa Clara System is subject to erratic flows and in most years does not supply sufficient water to satisfy all existing water rights, and the annual flow of the Santa Clara System is characterized by either low flows or extremely high flows with very few average water years.

1.4 To remove causes of present and future controversy over the waters of the Santa Clara System without further litigation, the Parties hereto have conducted extensive negotiations regarding the settlement of the water right claims of the Shivwits Band of the Paiute Indian Tribe of Utah, and the United States acting for the benefit of the Shivwits Band of the Paiute Indian Tribe of Utah.
AGREEMENT

NOW, THEREFORE, the Parties agree as follows:

2.0 PARTIES.

2.1 City of St. George ("St. George") is a Utah municipal corporation.

2.2 Shivwits Band of the Paiute Indian Tribe of Utah ("Shivwits Band") is one of five constituent bands of the Paiute Indian Tribe of Utah.

2.3 State of Utah, acting by and through its Department of Natural Resources ("Utah").

2.4 United States of America ("United States"), acting by and through the Secretary of the Interior.

3.0 DEFINITIONS.

3.1 "Alternative Water" means water, other than water from the St. George Water Reuse Project, that St. George shall deliver to the Point of Delivery to meet the Delivery Schedule for the Shivwits Reuse Water if the source, quality, terms, and conditions for the delivery of the alternative water are set forth in a written agreement between St. George and the Shivwits Band and approved by the United States acting in its capacity as trustee for the Shivwits Band; provided, however, that the delivery and use of the Alternative Water is approved by the State Engineer of Utah.

3.2 "Delivery Schedule" means the notice by the Shivwits Band to St. George for the timing and delivery of Shivwits Reuse Water. The Shivwits Band may request, and St. George shall deliver, up to 2.8 million gallons per day. St. George shall adjust the flow rate on a daily basis upon verbal request by the Shivwits Band.

3.3 "Enforceability Date" means that date which is determined by Section 10 of this Agreement.

3.4 "Point of Delivery" of the Shivwits Reuse Water means the eastern boundary of the Shivwits Reservation north of Ivins Reservoir near where the Santa Clara Bench Canal exits the
Reservation, or such other point of delivery mutually agreed to in writing by the Shivwits Band and St. George.

3.5 "Proposed Determination" means the Proposed Determination of Water Rights, Santa Clara River-Beaver Dam Wash Division, Book No. 1, issued by the State Engineer of Utah dated July 6, 1989, as amended.

3.6 "Reuse Water Delivery Year" means the period starting on January 1 and ending on December 31 of each calendar year.

3.7 "Settlement Agreement" means the Shivwits Band of the Paiute Indian Tribe of Utah Water Rights Settlement Agreement executed by the Bloomington Canal Company, Edward Bowler (a shareholder in the Gunlock Irrigation Company), Ivins Irrigation Company, Lower Gunlock Reservoir Corporation, the New Santa Clara Field Canal Company, the Shivwits Band, St. George, the St. George Clara Field Canal Company, the Southgate Irrigation Company, Utah, the United States, and the Washington County Water Conservancy District, and which is ratified and confirmed by Congress in legislation to settle comprehensively the water rights claims of the Shivwits Band in the Virgin River Adjudication.

3.8 "Shivwits Band Trust Fund" means the trust fund authorized by the Congress of the United States, in legislation to ratify and confirm this Agreement, to be established in the Treasury of the United States for the benefit of the Shivwits Band.

3.9 "Shivwits Capacity" means such capacity reserved in the St. George Water Reuse Project treatment plant, distribution system, and pump stations to allow 2.8 million gallons of water to be delivered to the Shivwits Band over any 24-hour period, when requested by the Shivwits Band.

3.10 "Shivwits Reservation" means the federal reservation of land in Washington County, Utah, that is held in trust by the United States for the benefit of the Shivwits Band, as described in Exhibit A, attached and incorporated by reference herein, and shall include any future trust acquisitions contiguous to the Shivwits Reservation.
3.11 "Shivwits Reuse Water" means a total of 2,000 acre-feet of water of Suitable Quality measured at and delivered annually to the Point of Delivery by St. George pursuant to the Delivery Schedule from the St. George Water Reuse Project, and shall be in addition to the water the Shivwits Band is entitled to receive under Sections 5.0, 7.0, and 8.0 of the Settlement Agreement.

3.12 "St. George Water Reuse Project" means the treatment facilities and a pipeline and all associated pumping and delivery facilities owned and operated by St. George that collectively are components of and will divert water from the Water Reclamation Facility and will transport water from the Water Reclamation Facility for delivery to and use by St. George and the Shivwits Band. St. George shall size the St. George Water Reuse Project to deliver up to a total of 2.8 millions gallons per day ("MGD") of water, up to 2,000 acre-feet annually, for use by the Shivwits Band. Such water shall be in addition to the water delivered to St. George for its use from the St. George Water Reuse Project. A general description of the St. George Water Reuse Project is attached as Exhibit B.

3.13 "Suitable Quality" means: (a) for Shivwits Reuse Water, the quality of water that meets all applicable water quality standards promulgated under federal and State law, including but not limited to all such standards for Type I use for reuse water under Utah Admin Code R317-1-4, and all requirements of any applicable National Pollutant Discharge Elimination System Permit promulgated under the Clean Water Act; and (b) for Alternative Water, the quality of water that is set forth in a written agreement negotiated and approved by St. George, the United States, and the Shivwits Band, pursuant to Subsection 3.1 of this Agreement.

3.14 "Virgin River Adjudication" means the statutory adjudication of water rights in the Fifth Judicial District Court of the State of Utah in and for Washington County, Civil No. 800507596.

3.15 "Water Reclamation Facility" means that facility owned and operated by St. George located at 3780 South 1550 West, St. George, Utah, for the treatment of municipal waste
4.0 WATER DELIVERIES BY ST. GEORGE TO THE SHIVWITS BAND.

St. George shall be capable of delivering, and shall begin to deliver upon request of the Shivwits Band, the Shivwits Reuse Water no later than two (2) years after all state and federal approvals, environmental clearances and permits for the construction of the St. George Water Reuse Project are obtained, and shall continue such deliveries, or if the Parties so agree, deliveries of Alternative Water, at Shivwits Capacity when required by the Delivery Schedule, in perpetuity each Reuse Water Delivery Year thereafter.

5.0 PROJECT CONSTRUCTION.

5.1 St. George shall be solely responsible for the design, permitting, engineering and construction of the St. George Water Reuse Project.

5.2 St. George shall cooperate with the Shivwits Band in constructing the St. George Water Reuse Project in a manner that integrates the delivery pipeline with the Shivwits Band’s receiving structure; provided, however, that St. George shall have no obligation to deliver the Shivwits Reuse Water at more than zero pressure head.

5.3 St. George and the Shivwits Band each shall pay for their proportionate share of the design, permitting, engineering and construction costs of the St. George Water Reuse Project. The present value of the Shivwits’ proportionate share of the design, permitting, engineering and construction costs of the St. George Water Reuse Project is $5.5 million. Subject to the occurrence of the actions identified in Section 10.0 of this Agreement, and subject to the availability of funds appropriated by Congress and deposited into the Shivwits Band Trust Fund for this purpose, the Shivwits Band and the United States shall pay the Shivwits Band’s share of these costs to St. George in advance of construction, but only after: (a) the project has been designed and its construction has been bid; (b) St. George has demonstrated to the Shivwits Band and the United States that the St. George Water Reuse Project as designed and bid contains redundancy features consistent with industry standards; (c) St. George has satisfied all permit,
license, environmental compliance, and all other applicable federal, State, and local requirements
necessary to construct the St. George Water Reuse Project and deliver the Shivwits Reuse Water
to the Point of Delivery; and (d) St. George has issued its notice of intent to award the bid for the
Project’s construction. Within 30 days from the date St. George provides written notice to the
Shivwits Band and the United States demonstrating that the terms of this subsection 5.3 have
been satisfied, the Shivwits Band and the United States shall deliver payment to St. George of the
$5.5 million required for the Shivwits Band’s proportionate share of the design, permitting,
ingenereering, and construction of the St. George Water Reuse Project.

5.4 Upon payment by the Shivwits Band and the United States to St. George of the
$5.5 million for the purposes identified in Section 5.3 of this Agreement: (a) St. George shall be
obligated to deliver the Shivwits Reuse Water to the Band in accordance with this Agreement;
and (b) the Shivwits Band and the United States shall have no further obligation for the design,
permitting, engineering, and construction costs necessary for St. George to deliver the Shivwits
Reuse Water to the Shivwits Band in accordance with this Agreement.

5.5 At the Shivwits Band’s request and expense, St. George shall add a maximum of
seven (7) active, metered service taps to allow for release of the Shivwits Reuse Water from the
St. George Water Reuse Project pipeline at such points as specified by the Shivwits Band before it
reaches the Point of Delivery.

6.0 PROJECT OPERATION AND MAINTENANCE.

6.1 St. George shall be solely responsible for the operation, maintenance, repair, and
replacement of the St. George Water Reuse Project.

6.2 St. George and the Shivwits Band each shall pay for their proportionate share of the
operation, maintenance, repair, and replacement costs of the St. George Water Reuse Project.
The present value of the Shivwits Band’s proportionate share in perpetuity of the operation,
maintenance, repair, and replacement costs of the St. George Water Reuse Project is $9.5 million.
Subject to the availability of funds appropriated by Congress and deposited in the Shivwits Band
Trust Fund for this purpose, the Shivwits Band and the United States shall pay the Shivwits Band’s share of these costs in full to St. George within 60 days from the date St. George has provided the Shivwits Band and the United States with a copy of the Certificate of Substantial Completion for the St. George Water Reuse Project and demonstrated to the Shivwits Band and the United States that St. George is capable of delivering the full quantity of Shivwits Reuse Water pursuant to this Agreement. The Certificate of Substantial Completion shall denote that the engineer and owner of the St. George Water Reuse Project consider the Project ready to deliver water for its intended use, and this shall be documented by the engineer delivering to the owner of and contractor for the St. George Water Reuse Project a definitive Certificate of Substantial Completion applying generally accepted engineering standards.

6.3 Upon payment by the Shivwits Band and the United States to St. George of the $9.5 million for the purposes identified in Section 6.2 of this Agreement, (a) St. George shall be responsible for the operation, maintenance, repair, and replacement of the St. George Water Reuse Project; and (b) the Shivwits Band and the United States shall have no further obligation for the operation, maintenance, repair, and replacement costs necessary for St. George to deliver Shivwits Reuse Water to the Shivwits Band in accordance with this Agreement.

6.4 St. George shall exercise reasonable diligence and care to avoid interruptions of delivery of Shivwits Reuse Water. St. George shall consult with the Shivwits Band periodically, but on no less than an annual basis, to schedule in a manner that will avoid or minimize harm to the Shivwits Band, bonafide operational and maintenance activities that are likely to result in interruptions of the delivery of Shivwits Reuse Water. St. George may interrupt delivery of Shivwits Reuse Water for bonafide operational or maintenance reasons that it was not otherwise able to schedule in advance with the Shivwits Band, but only for such reasonable time as may be unavoidable. St. George shall provide reasonable advance notice of such interruptions if the nature of the interruption permits such notice; provided, however, that if reasonable advance notice cannot be given, St. George shall notify the Shivwits Band of the interruption as soon as
possible after the interruption occurs. If, in circumstances other than Force Majeure, St. George
is unable to deliver the Shivwits Reuse Water to the Shivwits Band as required by this Agreement
for five or more consecutive days, St. George shall deliver an interim water supply to the Shivwits
Band at the Point of Delivery; provided, however, that the water quality for the interim water
supply shall be equal to or better than the quality of the water St. George is then using for
irrigation on its own golf courses and parks in the Santa Clara System; and provided further that
St. George shall not deliver an interim water supply to the Shivwits Band for longer than it
reasonably takes St. George to resume delivery of the Shivwits Reuse Water. Nothing in this
Agreement shall excuse St. George from any water quality requirement under any applicable law.

6.5 St. George shall provide the Parties with copies of the Reuse Project Plan, including
the operations and maintenance plan and the contingency plan, submitted to the State of Utah
Department of Environmental Quality, Division of Water Quality, pursuant to Utah Admin. Code
R317-1-4, in regard to the St. George Water Reuse Project, for the Parties’ review and comment
in advance of the State’s approval of each such document. The operations and maintenance plan
and the contingency plan shall include a provision for revisions to the plan, subject to review and
comment by the Parties. The Parties shall have at least 60 days to review each of the above
documents after its receipt. St. George shall operate the St. George Water Reuse Project in
compliance with the Reuse Project Plan and all applicable federal, State, and local requirements,
including any applicable National Pollutant Discharge Elimination System Permits promulgated

7.0. ST. GEORGE WATER REUSE PROJECT WATER RIGHTS.

St. George shall file and seek the approval of the State Engineer of Utah on all change
applications required to satisfy St. George’s obligations to deliver Shivwits Reuse Water in
accordance with this Agreement. The Shivwits Reuse Water delivered by St. George to the
Shivwits Band pursuant to this Agreement constitutes a contractual commitment and is a
compromise and settlement of certain water rights claims of the Parties to this Agreement in the
Virgin River Adjudication and thus does not constitute a lease or sale of St. George’s water rights, water supply or waterworks contrary to Article XI, Section 6 of the Utah Constitution.

8.0 SHIVWITS REUSE WATER RIGHT.

Beginning on the Enforceability Dates of this Agreement and the Settlement Agreement, the Shivwits Band, and the United States for the benefit of the Shivwits Band, shall be entitled in perpetuity to the Shivwits Reuse Water, in accordance with the terms of this Agreement, and delivered to the Point of Delivery in accordance with the Delivery Schedule. The Shivwits Band shall have the first priority to the reuse water provided from the St. George Water Reclamation Facility.

9.0 USE AND LEASING OF SHIVWITS REUSE WATER.

9.1 The Shivwits Band may use and lease its right to the Shivwits Reuse Water:

(a) for any purpose permitted by Tribal or Federal law anywhere on the Shivwits Reservation and such use shall not be subject to State or local law, regulation or jurisdiction; and

(b) for any beneficial use off the Shivwits Reservation in accordance with all applicable federal and State laws.

9.2 In any evaluation of a change application filed on the Shivwits Reuse Water, the State Engineer of Utah shall assume that there is total consumptive use of the Shivwits Reuse Water on the Reservation. In the event that an agreement for Alternative Water is executed by the Parties, St. George shall bear the risk of any depletion losses required by the State Engineer that might occur if Alternative Water is used off the Shivwits Reservation.

9.3 The Shivwits Reuse Water shall not be subject to loss by abandonment, forfeiture or non-use, whether used on or off the Shivwits Reservation.

10.0 ENFORCEABILITY DATE OF AGREEMENT.

This Agreement shall become effective and enforceable only on the Enforceability Date, which is the date upon which all of the following have been accomplished:

10.1 Execution of this Agreement by the Parties hereto;
10.2 Execution of the Santa Clara Project Agreement by all parties thereto;

10.3 Execution of the Settlement Agreement, and the Waivers and Release of Claims contained therein, by all parties thereto;

10.4 Ratification and confirmation of the Shivwits Water Right set forth in the Settlement Agreement in legislation duly enacted by the United States Congress;

10.5 Authorization and appropriation by the United States Congress and deposit into the Shivwits Band Trust Fund of: (a) fifteen million dollars ($15,000,000.00) for the Shivwits Band’s share of the costs of the St. George Water Reuse Project as set forth in this Agreement; (b) five million dollars ($5,000,000.00) in consideration of the Shivwits Band’s execution of a waiver and release of claims against the United States, and (c) one million dollars ($1,000,000.00) for operation and maintenance costs associated with the Santa Clara Project Agreement;

10.6 Approval by the State Engineer of Utah of any and all applications necessary to effectuate the terms of this Agreement, the Santa Clara Project Agreement, and the Settlement Agreement, from which no further appeals may be taken;

10.7 Approval by the State of Utah, Department of Environmental Quality, of all permits and actions necessary for St. George to construct the St. George Water Reuse Project;

10.8 Issuance of a judgment and decree in the Virgin River Adjudication, pursuant to Utah Rule of Civil Procedure 54(b), that is final as to all parties to the Santa Clara Division of the Virgin River Adjudication and from which no further appeals may be taken, which confirms the Shivwits Water Right set forth in the Settlement Agreement; and

10.9 The Secretary of the Interior has published a notice in the Federal Register that all of the actions identified in this Section 10 have been completed.

11.0 CONTINGENT UPON APPROPRIATION OF FUNDS

The expenditure or advance of any money or the performance of any obligation by the United States under this Agreement shall be contingent upon appropriation of funds therefore.

No liability shall accrue to the United States or to any other Party in the event that funds are not
appropriated.

12.0 **COUNTERPARTS.**

This Agreement may be executed in counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same Agreement.

13.0 **ENTIRE AGREEMENT.**

This Agreement supersedes any prior understanding, representation, or agreement of the Parties regarding the subject matter hereof.

14.0 **EVIDENTIARY EFFECT OF NEGOTIATIONS.**

This Agreement has been arrived at in the process of good faith negotiations for the purpose of resolving legal disputes, including pending litigation, and all Parties agree that no offers and/or compromises made in the course thereof shall be construed as admissions against interest or be used in any legal proceeding other than one for approval, confirmation, interpretation, or enforcement of this Agreement.

15.0 **FORCE MAJEURE.**

15.1 St. George shall exercise reasonable diligence and care to avoid interruptions of delivery of Shivwits Reuse Water, and shall not be liable for any damage or loss occasioned by any failure or interruption caused by a state of Force Majeure. For purpose of this Agreement, Force Majeure means acts of God, acts of public enemies, insurrection, riots, fires, explosions, floods, earthquakes, strikes, emergency actions St. George may be compelled to take to prevent serious injuries or death to persons, lawful orders or acts of civil or military authority, or other causes of similar nature. St. George shall restore its delivery of Shivwits Reuse Water as soon as is reasonably possible after such delivery is interrupted due to a state of Force Majeure.

15.2 In the event St. George believes a state of Force Majeure exists such that St. George cannot meet its obligation to deliver Shivwits Reuse Water as required by this Agreement, St. George shall provide written notification to the Shivwits Band as expeditiously as possible, but no later than sixty (60) days, after the event that resulted in a state of Force Majeure. This
written notice shall describe the anticipated duration of St. George's inability to deliver Shivwits Reuse Water, the cause or causes of the state of Force Majeure, a description of the measure(s) to be taken by St. George to permit it to meet its obligation to deliver Shivwits Reuse Water, and an estimated timetable for implementation of these measures. St. George shall take all reasonable measures to resume delivery of Shivwits Reuse Water after a state of Force Majeure occurs and written notification of same is provided by St. George.

16.0 **GOVERNING LAW AND RIGHTS AND REMEDIES**

16.1 This Agreement shall be construed in accordance with the applicable law of the State of Utah and applicable Federal law. Nothing contained herein waives the right of the United States or the Shivwits Band to object to the jurisdiction of the courts of the State of Utah to adjudicate any dispute arising under this Agreement, or waives the right of any Party to object to the jurisdiction of any federal court to adjudicate any dispute arising under this Agreement.

16.2 The Parties shall have all rights and remedies provided under applicable federal or state law for a breach or threatened breach of this Agreement; provided, however, that because this Agreement is intended to supply water in perpetuity to the Shivwits Band in lieu of the water rights claims filed by the United States for the benefit of the Shivwits Band in the Virgin River Adjudication, termination of this Agreement for breach of this Agreement is not a permitted or authorized right or remedy under this Agreement. These rights and remedies shall not be mutually exclusive, and the exercise of one or more of these rights and remedies shall not preclude the exercise of any other rights and remedies. Each Party confirms that damages at law may be an inadequate remedy for a breach or threatened breach of any provision hereof and the respective rights and obligations of the Parties hereunder shall be enforceable by specific performance, injunction, or other equitable remedy. Nothing in this Agreement shall be construed to waive the sovereign immunity of the United States.

17.0 **MODIFICATION OF AGREEMENT**.

Any modification of this Agreement or additional obligation assumed by any Party in
connection with this Agreement shall be binding only if evidenced in writing and signed by each
Party or an authorized representative of each Party.

18.0 NECESSARY ACTS AND COOPERATION

18.1 The Parties shall do any act or thing, and execute any and all instruments required
by this Agreement and which are necessary and proper to make effective the provisions of this
Agreement; provided, however, that the United States shall not be required to do any act or thing
that is not authorized by law and for which funds have not been appropriated by Congress; and
provided further, that Utah shall not be required to do any act or thing that is not authorized by
law and for which funds have not been appropriated by the Utah legislature.

18.2 The Parties shall not protest any applications filed with the State Engineer of Utah
in furtherance of or as needed to effectuate the provisions of this Agreement, the Santa Clara
Project Agreement, or the Settlement Agreement.

18.3 The Parties shall not file any objection or protest to an amended Proposed
Determination which may be issued by the State Engineer of Utah in furtherance of or as needed
to effectuate this Agreement, the Santa Clara Project Agreement, or the Settlement Agreement,
except to the extent that such amended Proposed Determination may be inconsistent with these
agreements.

18.4 The Parties shall not file any objection or protest to the Proposed Judgment and
Decree that is filed by stipulation of the Parties in the Virgin River Adjudication.

18.5 The Parties shall file in the Virgin River Adjudication those documents required
to obtain a decree, pursuant to Utah Rule of Civil Procedure 54(b), that is final as to all parties to
the Santa Clara Division of the Virgin River Adjudication and from which no further appeals may
be taken, which confirms the Shivwits Water Right as set forth in the Settlement Agreement.

19.0 NO WAIVER.

No delay or failure by any Party to exercise any right under this Agreement, and no partial
or single exercise of that right, shall constitute waiver of that or any other right, unless expressly
provided herein. No waiver by a Party under this Agreement shall affect or alter the remainder of this Agreement, and each and every covenant, duty, and condition hereof shall continue in full force and effect with respect to any other then existing or subsequently occurring breach.

20.0 **NOTICES.**

Any notice to be given hereunder shall have been properly given when hand delivered to the officer or manager designated in this Section, or when deposited in the United States mail, certified or registered, postage prepaid, addressed as follows:

Chairperson, Shivwits Band

21.0 **OFFICIALS NOT TO BENEFIT.**

No member of or delegate to Congress or Resident Commissioner shall be admitted to any share of this Agreement or to any benefit that may arise herefrom. This restriction shall not be construed to extend to this Agreement if made with a corporation or company for its general benefit.
22.0 PERSONS BOUND BY AGREEMENT.

22.1 This Agreement shall be binding upon and inure to the benefit of the Parties hereto and their respective employees, representatives, successors, and assigns.

22.2 If St. George makes any conveyance of title, easement, or other interest in any of the facilities related to the operation of the St. George Water Reuse Project, St. George shall continue to meet all obligations under this Agreement.

22.3 In any action to enforce any term of this Agreement, St. George shall not raise as a defense the failure by any of its officers, directors, agents, servants, employees, successors, assigns, and contractors to take actions necessary to comply with the provisions of this Agreement. St. George reserves its rights against any such person or entity whose acts cause or permit St. George to violate the terms of this Agreement. St. George shall be responsible for the acts of its officers, directors, agents, servants, employees, successors, assigns, and contractors, who violate, cause or permit St. George to violate the terms of this Agreement.
24.0 SIGNATURE AUTHORITY.

The undersigned representative of each Party to this Agreement certifies that he or she is fully authorized to enter into the terms and conditions of this Agreement, to execute it and to bind the Party each person represents to this Agreement.

IN WITNESS WHEREOF, the Parties have executed this Agreement dated on the day and year first above written.

EXHIBIT B

[Reference: section 3.12]

ST. GEORGE WATER REUSE PROJECT DESCRIPTION

The St. George Water Reuse Project (the "Project") will serve current and future nonresidential secondary water users in the St. George area, including but not limited to, golf courses, parks and schools. The Project will treat effluent water discharged at the St. George Water Reclamation Facility and transport it along approximately 15 miles of pipeline to areas of public and private uses within the City of St. George and to the eastern boundary of the Shivwits Reservation north of Ivins Reservoir near where the Santa Clara Bench Canal exits the Reservation, or such other point of delivery in Washington County mutually agreed to in writing by the United States, the Shivwits Band, and St. George. The Project will have a design capacity of 10.5 million gallons per day (mgd).

Effluent discharged from the Water Reclamation Facility must receive additional treatment prior to delivery as Shivwits Reuse Water. The Water Reclamation Facility currently achieves disinfection using ultraviolet light (UV) which does not produce a disinfection residual in the delivery system as required by state regulation. The Project will meet all federal, state and city requirements. The Project will include the following features: final filters, chemical building, chlorination facilities (liquid or gas), flow equalization/chlorine contact basin, site work, yard piping, pump stations, transmission pipeline system, planning, engineering, administrative, legal and fiscal services, right-of-way acquisition, permitting, operation, maintenance, replacement and other appurtenances necessary to provide a functioning treatment and delivery system.
EXHIBIT D

JUDGMENT AND DECREE
JUDGMENT AND DECREE

This matter came before the Court pursuant to a stipulation of the State of Utah (by and through the Utah State Engineer), the United States, the Shivwits Band of the Paiute Indian Tribe of Utah, the Washington County Water Conservancy District, St. George City, the Bloomington Canal Company, the Ivins Irrigation Company, the Lower Gunlock Reservoir Company, the New Santa Clara Field Canal Company, the Southgate Irrigation Company, the St. George Clara Field Canal Company, and Edward Bowler.

The stipulation seeks to have the Court determine, confirm and decree the water rights of the United States, held for the benefit of the Shivwits Band of the Paiute Indian Tribe of Utah Indians in the Virgin River and Santa Clara River Systems as part of the Virgin River General Adjudication.

In this regard, the Court finds as follows:

1. The water rights of the parties St. George City, Bloomington Canal Company, Ivins Irrigation Company, Lower Gunlock Reservoir Company, New Santa Clara Field Canal Company, Southgate Irrigation Company, St. George Clara Field Canal Company, and Edward Bowler have heretofore been confirmed in an order of the Court entered on ____________, subject to any subsequently filed protests by the United States, should the Shivwits Band of the Paiute Indian Tribe of Utah Water Rights Settlement Act not be finally implemented.

2. The Utah State Engineer has submitted to the Court the Proposed Determination of Water Rights in the Virgin River Drainage Area, Santa Clara River--Beaver Dam Wash Division, Shivwits Band Subdivision, Code No. 81, Book No. 7 (hereinafter "Shivwits Band Proposed Determination"),
which sets forth the report and recommendation as to how all the water rights of the Shivwits Band should be determined and quantified.

3. Pursuant to a prior order of the Court dated ______________, notice of the Shivwits Band Proposed Determination has been duly served on all necessary parties of record and further notice by publication has been duly accomplished.

4. No protests or objections to the Shivwits Band Proposed Determination have been filed or received by the Court. [NOTE: If objections are made, the Decree will have to address them.]

5. On August 18, 2000, Congress enacted into law the Shivwits Band of the Paiute Indian Tribe of Utah Water Rights Settlement Act, Public Law 106-263, 114 Stat. 737, which confirms the settlement and quantification of the water rights claims of the United States for the benefit of the Shivwits Band and the Shivwits Band. Said Act requires confirmation of these water rights by this Court as part of the Virgin River General Adjudication.

6. The United States, as part of the Virgin River General Adjudication proceeding, has filed no other claims for federal reserved, aboriginal or State-based water rights for any other Indian tribe, band or community other than the Shivwits Band of the Paiute Indian Tribe of Utah.

7. The proposed settlement of the water rights of the United States for the benefit of the Shivwits Band will avoid long and costly litigation and will provide the parties certainty regarding their respective water rights that will allow them to plan for the future in the Santa Clara Drainage.

Pursuant to the stipulation of the parties and as moved by the Utah State Engineer and good cause appearing, NOW THEREFORE, it is hereby ADJUDGED, DECREED AND ORDERED as follows:
I. SHIVWITS WATER RIGHT

The United States, for the benefit of the Paiute Indian Tribe of Utah ("Tribe") and the Shivwits Band of the Paiute Indian Tribe of Utah ("Shivwits Band"), has the following right to divert, pump, impound, use and reuse, and to permit others, under certain conditions set forth in the Agreements described below as Exhibits A, B and C hereto, to divert, pump, impound use and reuse water (collectively referred to as the "Shivwits Water Right" or "Right"), which is hereby determined, quantified, settled, ratified and confirmed, and is held in trust by the United States for the benefit of the Shivwits Band.

A. The Shivwits Band has the right in perpetuity to divert, pump, impound, use, and reuse a total of 4,000 acre-feet of water annually from the Virgin River and Santa Clara River Systems, in accordance with the terms of the Shivwits Band of the Paiute Indian Tribe Water Rights Settlement Agreement, the St. George Water Reuse Agreement, and the Santa Clara Project Agreement, which are incorporated by reference as Exhibits A, B and C, respectively, to this Decree, subject to Paragraphs II.C and D below. The Shivwits Band shall take this Right as follows:

1. 1,900 acre-feet of water annually from the Santa Clara River System, with an 1890 priority date in accordance with the terms of the Santa Clara Project Agreement (Exhibit C hereto). This right may be used from January 1 to December 31 of each year. Any reductions in this right due to inadequate water availability shall be distributed with proportionate reductions in water deliveries as set forth in the Santa Clara Project Agreement. The 1,900 acre-feet annually provided to the Band from the Santa Clara Project includes the
500.60 acre-feet of water under Water Rights Nos. 81-2313 and 81-2425, set forth in the Proposed Determination of Water Rights for the Santa Clara River--Beaver Dam Wash Division, Code No. 81, Book No.1 at pp. 199-200;

2. 2,000 acre-feet of water annually from the Virgin River System, to be delivered from the St. George Water Reuse Project as provided for in the St. George Water Reuse Project Agreement (Exhibit B hereto). This right may be used from January 1 to December 31 of each year. The Shivwits Band’s priority to sewage effluent use shall be __________, which is the date the City of St. George filed a change application with the Utah State Engineer pursuant to Utah Code Ann. § 73-3c-2(2) to accomplish the purposes set forth in the St. George Water Reuse Project Agreement. Pursuant to the St. George Water Reuse Project Agreement, the Shivwits Band shall have first priority to the reuse water provided from the St. George Water Reclamation Facility. The Court finds that the transfer and use of sewage effluent provided for herein from the St. George Water Reclamation Facility and delivered to the Shivwits Band under the Reuse Project, as approved by the Utah State Engineer, is in accordance with applicable Utah law;

3. 100 acre-feet annually, with an April 21, 1916 priority date, from groundwater to be diverted within the boundaries of the Shivwits Reservation and used from January 1 to December 31; and,
4. The perpetual right to divert and use water from any springs and surface runoff located within the boundaries of the Shivwits Reservation. The amounts used from these sources will be reported annually to the Utah State Engineer by the Shivwits Band and shall be counted against the annual 4,000 acre-foot Shivwits Water Right provided for herein.

B. The Shivwits Band may use the Shivwits Water Right:

1. For any use permitted by Tribal or Federal law, including uses that totally deplete the water diverted, anywhere within the boundaries of the Shivwits Reservation, and such use, after delivery to the Reservation, shall not be subject to State law, regulation or jurisdiction; and,

2. For any beneficial use off the Shivwits Reservation in accordance with the St. George Water Reuse Agreement (Exhibit B), the Santa Clara Project Agreement (Exhibit C), or the Settlement Agreement (Exhibit A), and all applicable Federal and State laws.

C. Because it is a federal reserved water right, or in satisfaction thereof, the Shivwits Water Right shall not be subject to loss by abandonment, forfeiture, or nonuse, whether it is on or off the Shivwits Reservation.

D. To the extent that the Shivwits Water Right is to be delivered through projects or works that require construction, the Court finds that applicable applications to appropriate and/or to change the point of diversion, place or nature of use of water regarding the Santa Clara Project and the St. George Reuse Project have been approved by the Utah State Engineer.
E. Any entitlement to water of any member of the Shivwits Band for lands within the Reservation shall be satisfied out of the water sources decreed herein, and neither the Shivwits Band or its individual members shall have further claims to the use of water within the Reservation, except as provided for herein.

F. The Shivwits Water Right hereby decreed includes all water rights of every nature and description derived from all applicable water right doctrines, from all sources of water, both surface and underground, and includes all types and kinds of uses for the Shivwits Band.

II. GENERAL PROVISIONS

A. For the purposes of this Decree, the “Shivwits Reservation” means the federal reservation of land in the Santa Clara River System in Washington County, which is held in trust by the United States for the benefit of the Shivwits Band of the Paiute Indian Tribe of Utah. A map of the Shivwits Reservation as presently constituted is attached hereto as Exhibit D and incorporated by reference to this Decree.

B. Nothing in this Decree shall be construed to:

1. affect the water rights or claims of the Paiute Indian Tribe of Utah, other than those of its constituent band, the Shivwits Band, set forth herein, on any drainage other than the Virgin River and Santa Clara River Systems;

2. affect in any manner the ability of the Shivwits Band and/or the Paiute Indian Tribe of Utah to appropriate water rights under State law for any lands other than those within the Shivwits Reservation, as it exists as of the date of this
Decree, to purchase additional water rights for the Reservation, or to participate in other water agreements or projects;

3. quantify or otherwise adversely affect the water rights, claims or entitlements to water of any Indian tribe, band or community outside the Virgin River System, or the United States for their benefit, other than the Shivwits Band, the Paiute Indian Tribe of Utah on behalf of the Shivwits Band, and the United States for the benefit of the Shivwits Band;

4. quantify or otherwise adversely affect the water rights, claims or entitlements to water of the United States, other than as to the United States’ actions for the benefit of the Shivwits Band and the Paiute Indian Tribe of Utah on behalf of the Shivwits Band;

5. establish any agreement, precedent or standard to be used for the quantification of any reserved water rights in any other judicial or administrative proceeding.

C. The agreements attached hereto, in addition to quantifying and settling the reserved water rights claims of the United States for the benefit of the Shivwits Band and the Shivwits Band, contain certain provisions dealing, inter alia, with other matters which do not directly relate to the quantification and distribution of the water rights claimed by the United States for the benefit of the Shivwits Band and the Shivwits Band. In adopting, confirming or referencing said agreements as part of this Decree, it is the express intention of the Court to adopt only the portions of those agreements dealing directly with the determination, confirmation, quantification and distribution of the water rights.
of the United States for the benefit of the Shivwits Band and the Shivwits Band over which the Court has jurisdiction to determine.

D. This Court retains jurisdiction over this matter for the enforcement of this judgment, but only as to the determination, quantification and distribution of the water rights set forth in this Decree. The Court does not exercise or retain jurisdiction as to those parts of the agreements which do not deal directly with the determination, confirmation, quantification or distribution of the water rights confirmed in this Decree. Further, nothing herein shall preclude any party from challenging the Court’s continuing jurisdiction or be deemed to waive any defenses which may be applicable.

E. Except to the extent provided in Subsections (a), (b) and (c) of § 208 of the Department of Justice Appropriation Act, 43 U.S.C. § 666 (1953), nothing in this Decree shall be construed as a waiver of the sovereign immunity of the United States.

F. Pursuant to Section 14(a) of the Shivwits Band Water Rights Settlement Act enacted by Congress, certain actions must take place before the waivers executed by the United States on behalf of the Shivwits Band become effective. Any party may petition this Court, pursuant to Rule 60(b), U.R.C.P., to amend or rescind this Decree in the event all of the conditions in Section 14(a) and the deadline set forth in Section 14(b) of the Act are not satisfied.

G. This Decree determines and settles multiple claims by some but not all of the parties to the Virgin River General Adjudication, but is final as to the parties to the Stipulation and the Agreements, and all other parties to the Santa Clara portion of the Virgin River Adjudication. Therefore, pursuant to Rule 54(b), U.R.C.P., the Court hereby finds and expressly determines that there is no just reason for further delay in the entry of a final judgment in this matter.
The Court hereby ORDERS that this Judgment and Decree be entered and certified as a final judgment pursuant to Rule 54(b), U.R.C.P.

Dated this __________ day of ________________, 200__.

BY THE COURT:

__________________________
DISTRICT JUDGE
EXHIBIT E

MEMORANDUM OF UNDERSTANDING
MEMORANDUM OF UNDERSTANDING

This Memorandum of Understanding (the “MOU”) is made and entered into by and among the WASHINGTON COUNTY WATER CONSERVANCY DISTRICT, a Utah water conservancy district (the “District”), the STATE OF UTAH (“Utah”) acting by and through the Utah Department of Natural Resources and the SHIVWITS BAND OF THE PAIUTE INDIAN TRIBE OF UTAH (the “Shivwits Band”).

RECITALS

A. Washington County is one of the fastest growing counties in Utah and in order to meet its future water supply needs it will be necessary to develop additional sources of water. Utah and the District are undertaking studies and conducting investigations to determine the feasibility of constructing additional projects to make water available for the residents of Washington County.

B. The Shivwits Band anticipates the need for an additional water supply to meet the future needs of the members of the Shivwits Band. The Shivwits Reservation is located in Santa Clara River Drainage Basin in Washington County and is more particularly shown on the attached map, Exhibit “A”, incorporated by reference herein.

C. The parties hereto agree to work in a cooperative manner to assist the Shivwits Band in securing additional water in the future for use on the Shivwits Reservation in accordance with the terms and conditions set forth herein.

AGREEMENT

NOW, THEREFORE the parties enter into this Memorandum of Understanding and agree as follows:

1.0 Shivwits Band Domestic Water

1.1 The Shivwits Band currently receives its domestic water supply pursuant to a contract with St. George City. However, the Shivwits Band anticipates that it may need an additional supply of domestic water to meet future needs of the Shivwits Band.

1.2 The District is currently supplying water to residents of Washington County in the vicinity of the Shivwits Reservation and anticipates that it will develop additional water projects to meet the water supply needs in this area of Washington County.

1.3 The District and the Shivwits Band agree to work cooperatively to meet the domestic water supply requirements of the Shivwits Band. The Shivwits Band shall advise the District as far in advance as reasonably possible of its anticipated requirements for this additional water. The District agrees to use its best efforts to make water available to meet future domestic water requirements of the Shivwits Band.
1.4 The District agrees that, with respect to any future domestic water supply contract, the Shivwits Band will be treated the same as other persons or entities that contract with the District for domestic water.

2.0 Beaver Dam Wash Project

2.1 The District anticipates that one of its potential projects to supply the future water needs of the residents of Washington County is the construction of a dam, reservoir and associated facilities on Beaver Dam Wash in western Washington County (the “Beaver Dam Wash Project”). The Beaver Dam Wash Project is in a location where it may be possible to deliver water to the Shivwits Reservation.

2.2 The District and the Shivwits Band agree to cooperate in the planning of the Beaver Dam Wash Project in order to determine if the Shivwits Band desires to participate as a co-sponsor of the Project or as a subscriber of water.

2.3 The District agrees to work cooperatively with the Shivwits Band and to treat the Shivwits Band as any other person or entity that may be cooperating with the District as a project sponsor or as a subscriber of water from the Beaver Dam Wash Project, if it is constructed.

3.0 Lake Powell Pipeline Project

3.1 Utah and the District are undertaking studies and conducting an investigation to determine the feasibility of constructing a pipeline from Lake Powell to deliver water into Washington County (the “Lake Powell Pipeline Project”). The Lake Powell Pipeline Project would deliver a portion of Utah’s Upper Colorado River Basin allocation for use in Washington and Kane Counties, Utah.

3.2 In the event Utah and/or the District constructs the Lake Powell Pipeline Project, the Shivwits Band anticipates that it will want to subscribe for a block of Lake Powell Pipeline Project water.

3.3 Utah and the District agree that the Shivwits Band may be a subscriber for water from the Lake Powell Pipeline Project, if it is constructed, and that the Shivwits Band will be treated the same as other subscribers of Lake Powell Pipeline Project water.

3.4 Upon request, Utah and the District will inform the Band of the status of the feasibility studies for the Lake Powell Pipeline Project and of the time frame for planning and development of the Lake Powell Pipeline Project. If the Project is determined to be feasible, upon request, Utah and the District will provide the Band with all preliminary draft and/or completed project-related feasibility studies, engineering and economic plans and studies.

4.0 Authorization

Each individual executing this MOU does hereby represent and warrant to each other signing (and to each other entity for which another person may be signing) that he or she is authorized to sign this MOU in the capacity and for the entities set forth where he or she signs.
5.0 Necessary Acts of Cooperation

This MOU represents a set of principles that the parties agree to work toward and the parties agree to proceed in good faith to implement the terms and provisions of this MOU.

6.0 Notices

Any notice to be given hereunder shall be properly given when received by the officer, manager or attorney designated in this section or when deposited in the United States Mail, certified or registered, postage prepaid, addressed as follows. Notice to the Shivwits Band must be sent to both Shivwits Band representatives listed below:

Attn: Shivwits Band Chairperson
P.O. Box 448
Santa Clara, Utah 84765

Technical Consultant for Shivwits Band
Attn: Ron Billstein
MSE-HKM
P.O. Box 30318
Billings, Montana 59107-1318

Washington County Water Conservancy District
Attn: Ronald W. Thompson
136 North 100 East, Suite No. 1
St. George, Utah 84770

State of Utah, Department of Natural Resources
Attn: Department Director
1594 West North Temple, Suite 3710
P.O. Box 145610
Salt Lake City, Utah 84114

7.0 Execution of Agreement

This MOU may be executed in counterparts each of which shall be deemed an original but all of which together shall constitute one and the same MOU.

8.0 Effective Date of MOU

This MOU shall be effective when the Settlement Agreement and the Shivwits Band of the Paiute Indian Tribe of Utah Water Rights Settlement Act become effective and enforceable.
IN WITNESS WHEREOF each of the parties to this MOU have caused it to be executed on the date indicated below.

EXHIBIT F

AGREEMENT FOR SALE OR EXCHANGE OF DOMESTIC QUALITY WATER
BY AND BETWEEN
THE SHIVWITS BAND OF THE PAIUTE INDIAN TRIBE OF UTAH
AND THE CITY OF ST. GEORGE, UTAH
This Intergovernmental Agreement ("Agreement") is made and entered into by and between the City of St. George, Utah, and the Shivwits Band of the Paiute Indian Tribe of Utah on ____________________.

DEFINITIONS

Band: The Shivwits Band, a federally recognized sovereign Indian Tribe, and one of the five constituent bands of the Paiute Indian Tribe of Utah.

City: The City of St. George, a Utah municipal corporation.

Domestic/ Potable Water: Water that meets all applicable drinking water standards.

RECITALS

The Band and the City are two of several parties currently negotiating a settlement of the Shivwits Band's reserved water rights claims. Under the proposed settlement, the United States on behalf of the Band would pay the City $15 million to build a new Reuse Project at the City's wastewater treatment plant. The Band would settle its water rights claims in exchange for 4000 acre feet annually of non-potable water, 2000 acre feet of which would come from the Reuse Project. One condition precedent to effectiveness of the proposed settlement is that the Band first enter enforceable agreements with the City and the Water District that will satisfy the Band's future needs for potable water.

The purpose of this Agreement is to set forth the terms and conditions under which the City will sell to or exchange with the Band potable water, in perpetuity, at in-City rates.

AGREEMENT

The parties agree that:

1. The City will provide up to 200 acre feet annually ("AFA"), at peak flow rates of 250 gallons per minute, of domestic/potable water to the Band pursuant to one or more of
the following options:

a. The Purchase Option Currently in Place: The City sells to the Band the amount of domestic/potable water it requests, up to 100 acre feet annually. The water is supplied from the water tank located on the Shivwits Reservation that is supplied by the N-Aquifer or from some other source agreed to by both the City and the Band. The price of the domestic/potable water shall be the same then charged to City residents. The amount of water taken by the Band shall be measured by the City’s meters where Shivwits delivery pipelines connect to the City’s main pipeline or tank or at any other mutually agreed points of delivery. Nothing herein precludes the City from selling the Band additional water beyond 100 AFA at in-City rates.

b. Exchange: The Band may elect to exchange water from its Reuse Water Right for the same quantity of treated domestic/potable water from the City, provided that the amount exchanged when combined with any amount being purchased under option 1(a) above shall not exceed 200 AFA. The domestic/potable water will come from the City water system located on the Shivwits Reservation that is supplied by the N-Aquifer or from some other source agreed to by both the City and the Band. The amount of water taken by the Band shall be measured by the City’s meters where Shivwits delivery pipelines connect to the City’s main pipeline or tank or at any other mutually agreed points of delivery. In addition to this 1 to 1 exchange of waters of comparable value, the Band will pay the in-City rates for treatment and delivery of the exchanged potable water, but not any water acquisition costs or other irrelevant add-ons charged to City residents. Through this arrangement, the City will save the cost of pumping the exchanged Shivwits Reuse Water north to the Reservation. The City will remain obligated to provide domestic/potable water during interruptions of service from the Reuse Project, including those interruptions designated as Force Majeure in Section 15.1 of the Reuse Agreement. Upon three months’ notice, the Band may initiate, increase (not to exceed the 200 AFA cap), decrease, suspend, or terminate the exchange.

c. Alternative Means: The Parties may agree upon any other
method of providing domestic/potable water to the Band. If the Parties decide at any time to implement any alternative means of providing such water to the Band, other than the means set forth in Paragraph 1 (a) and (b), they agree to act promptly and in good faith to implement any alternative means of providing such water under this Agreement so that there is no interruption in the provision of domestic/potable water to the Band.

2. In accordance with Article XI, Section 6 of the Utah Constitution, the sale of domestic/potable water to the Band under Paragraph 1(a) is contingent on the City's having surplus domestic/potable water over and above the needs of the inhabitants of St. George. If the City determines, without discriminating between the Band and any other out-of-city water users, that providing any water outside of its boundaries will adversely impact its ability to provide water to the inhabitants of St. George, the City may discontinue that service after giving the Band three month's notice that it is no longer in a surplus water supply condition. The exchange of water under Paragraph 1(b) is not subject to Article XI, Section 6 of the Utah Constitution.

3. If the Band requests, but the City cannot provide, the full 100 AFA under 1(a) above, the remainder will be provided through the 1(b) exchange process. Upon receiving notice under paragraph 2, the Band may elect to implement an exchange or expand a preexisting exchange under 1(b) to replace the domestic/potable water it can no longer purchase. If the Band so elects, the City shall begin to provide water under 1.b at the same time it stops providing water under 1.a, with no interruption in service of domestic/potable water to the Band.

4. The Band or its designee will own and pay for the design, construction, operation, maintenance, repair and replacement of any additional on-reservation delivery system that receives water provided under this Agreement. The City will continue to be responsible for the OMR&R of any City-owned infrastructure utilized for delivery under this Agreement.

5. The City will monitor and record water deliveries to the Band on both a monthly and cumulative yearly basis. The Band will permit the City to enter the Reservation when necessary to read the water meters. The City agrees that
if and when it installs fully-automated recording stations for any of its water users, it will install them for the measurement of the domestic/potable water it delivers to the Band. Said automated meters will minimize measurement activities on the Reservation and allow for daily meter readings, thereby assisting the Band in keeping track of its water costs and in early detection of leaks in delivery and distribution.

6. Water lost through leaks will not count against the Band’s AFA caps, but the Band will pay for that water in the same manner that other customers are required to do so. The City will use standard engineering methods to estimate the amount lost through leakage.

7. Upon a request from the Band to the appropriate City office, the Band is entitled to inspect during business hours and copy at its own expense the records relevant to the City’s charges for water provided under this Agreement.

REPRESENTATIONS AND WARRANTIES

Persons Bound by Agreement
This Agreement shall be binding upon and inure to the benefit of the Parties hereto and their respective employees, representatives, successors, and assigns.

Non-Transferable
The Band’s rights under this Agreement may not be assigned to any other entity.

Due Authority/Approval
The undersigned representative of each Party to this Agreement certifies that he or she is fully authorized to enter the terms and conditions of this Agreement, to execute it, and to bind the party to this Agreement. The execution and delivery of this Agreement and the City’s obligations under the Agreement have been duly authorized by all necessary actions of the City, and no other act, or proceeding by the City is necessary to authorize such execution, delivery, or performance.

Each person signing this agreement personally warrants and represents that he or she has reviewed the Agreement, understands its terms and conditions, and has been advised by counsel regarding the same.
RIGHTS AND REMEDIES

Disputes under this Agreement will be decided by arbitration. Each side shall select an arbitrator and the two arbitrators shall select a third arbitrator. If a party is dissatisfied with the results after the arbitration is concluded, this paragraph does not preclude subsequent judicial remedies, wherein the parties shall have all rights and remedies provided under applicable law. Each Party confirms that damages may be an inadequate remedy for a breach or threatened breach of any provision hereof and the respective rights and obligations of the Parties shall be enforceable by specific performance, injunction or other equitable remedy.

ENTIRE AGREEMENT

This Agreement shall constitute the entire agreement between the parties. Any prior understanding or representation of any kind preceding the date of this Agreement concerning the subject of this Agreement shall not be binding upon either Party except to the extent incorporated in this Agreement.

EARLIER AGREEMENTS PARTIALLY SUPERSEDED

Certain select portions of the August 15, 1966 right-of-way agreement, the April 30, 1991 Lease and Right of Way Agreement, and the January 30, 1995 Right of Way Agreement concerning the City's obligations to sell potable water to the Band are superseded hereby. Specifically, the reference to "out of city water tappings" in the 1966 agreement is superseded; the limit to "needs of inhabitants of City" in 1966 agreement is superseded; the limit to 45 residential connections and culinary and fire protection purposes in Para 4. of the 1991 Agreement is superseded; the provisions concerning lack of surplus water in Section 4 of the 1991 agreement are superseded; and the first four lines of Para. 2 of the 1995 agreement (preserving the provisions of the 1991 agreement regarding supply of water to the Band from the Water Tank) are superseded. All other terms of those three prior agreements remain in effect unless directly inconsistent with express provisions of this Agreement, in which case this Agreement controls.

MODIFICATION

Any modification of this Agreement or additional obligation assumed by either Party in connection with this Agreement shall be binding only if evidenced in writing signed by each Party or an authorized representative of each Party.
