#### FIELD TRIPS

San Mateo Field Trip, Sunday the 7th, on a day especially created for a field day, nine archaeologists started out for the San Mateo country. After a few stops at campsites to pick up some shords and pieces of worked obsidian we arrived at the town of San Mateo. Just outside the city limits was a mound which was well guarded from the road by a series of 3 or 9 fences. Undaunted, the group surmounted this hazard and inspected the mound. San Mateo is well known for its penitentes, and on the way to the dam, we passed several crosses. We visited a campsite near Grants where Johnny and Bill found two elegant flint points; discouraged, the rest of us went home. (So did Bill and Johnny.)

Cabezon Field Trip--Sunday the 14th, two cars left the Ad. building at approximately 8:30, meeting again at the Alameda bridge. We traveled over one of New Mexico's bumpiest roads to a herder's cabin and asked directions to Sky Village which was just a few miles from there. After lunch and a hurried game of horses'oes we ascended the steep and sandy side of the mesa to the old village site where some fossil imprints and potsherds were found. The country for miles was virable, and the first rattlesnake of the season put in their appearance. Johnny set out to capture them, but failed miserably. A little difficulty was encountered in getting to the town of Cabezon, in the form of a washed-out bridge, but after crusing over the landscape a while a whole bridge was found, and the river was crossed. Dr. Brand and the boys investigated the top of a promising looking mesa, but found only the top of a mesa. The remainder of the day was spent in getting home.
