Academic Health Sciences Libraries' Outreach and Engagement with Native American Communities: A Scoping Review

Allison Cruise, A. Nydia Villezcas, Jonathan D. Eldredge, Alexis
Ellsworth-Kopkowski, Melissa L. Rethlefsen

Introduction

- HSLIC is dedicated to providing **empowering programs** which champion **inclusivity, equity and accessibility**
- We seek to engage with communities across New Mexico in **intentional, culturally appropriate** ways which promote health equity by addressing **disparities** in health information access

Introduction

- This scoping review was planned to support these efforts
- The review focuses on AHSL outreach to Native American populations, which make up 11% of New Mexico's total population

Objective

- Identify trends and themes in how academic health sciences libraries (AHSs) have supported community engagement and outreach with Native American communities
- Learn about and share culturally relevant effective practices.

Methods

Scoping Review

Arksey & O'Malley framework

- identifying the research question
- identifying relevant studies
- study selection
- charting the data
- collating, summarizing and reporting the results

Research Questions

- **Intervention types:** What types of interventions are used by AHSs when engaging with Native American communities?
- **Public participation:** What is the level of public participation reached in these outreach/engagement interventions? What partnerships are established?
- **Effective practices:** What effective practices emerge from these interventions?

Inclusion/Exclusion Criteria

Inclusion

- **Participants** Native Americans located in North America, including US, Canada and Mexico
- **Concept** Community engagement and outreach programs
- **Context** Academic Health Sciences Libraries in US, Canada or Mexico performing community engagement or outreach activities to Native American populations

Exclusion

- CE or outreach programs led by general academic libraries; hospital; association or government libraries
- CE or outreach programs with academic health sciences librarians as a participant, but not led by an academic health sciences library
- Internal diversity training and practices
- Outside designated geographic areas, or if the population included is not from North America

Information Sources

Discussion

- Most outreach/community engagement is done at the lowest level of public participation
- Most interventions involve training
- Websites no longer major outreach type

Discussion

- Very little published; most content was ephemeral and lacked detail
- Evidence of outreach/engagement projects missing
 - Websites don't exist
 - Working groups/steering committees no longer meeting

Discussion

- Without major, dedicated funding from NLM and NNLM, opportunities for outreach are local and short-term
- Native Voices gave incentive to AHSs to create collaborations and partnerships

Discussion

- Funders' reliance on 1-2 year projects makes deep engagement impossible and goes against best practices

Next Steps

- Interviews
- Additional analysis of themes and effective practices
