You are invited to join us on Thursday, September 15th from 10 to 11 AM, for a virtual seminar by Deborah L. Lauseng, AMLS

Topic: Roles, Collaborations, and Activities in Health Informatics Education - a discussion of scoping review findings and your own involvement

Description: Librarians and libraries have been engaged in informatics training for decades, however, sharing of the types and extent of engagement has been limited in the literature. The scoping review, "Library involvement in health informatics education for health professions students and practitioners," published in *JMLA*, seeks to explore the extent library involvement in health informatics education, specifically focused on activities and outcomes described in the published literature.

In this BioMISS session, the lead author will share findings on the roles, collaborations, and activities librarians have had in health informatics beyond instruction. The author will lead a discussion about current and potential collaborations. Additionally, attendees will explore how best to report their involvement with health informatics to inform the profession.

Learning objectives:

Participants will gain insights into the extent and nature of librarian/information professional involvement with health informatics as discovered through this scoping review.

Participants will explore potentials of collaboration with health informatics activities in their own work.

Participants will discuss generating a standardized template for reporting librarian/information professional involvement in informatics educational activities.

Please email BLCarroll@salud.unm.edu to request Zoom info.
