

June 8, 1949.

Went up to F.L. Pito with Ken Colman.
Rained up here last night and ^{we} passed through a
shower and hail storm along the lower Chama on the
way up. It showered intermittently all day.

~~F.L. Pito Creek~~

We are looking for Pala nigrescens spawning
and Pantostictus phcheis.

F.L. Pito Creek is almost a continuous
riffle. Good pools are scarce although breaks in
the riffles are fairly common. Fish are very
scarce in the upper end, many likely spots
being missed without any fish coming out. Trout
were conspicuous by their absence from some
excellent holes.
