SOM Competencies 2022

- 1.3. Integrate concepts of structural and social determinants of health as key mechanisms that underlie health and disease to effectively solve problems related to patient care.
- 2.4. In collaboration with the patient and the healthcare team, make informed decisions about therapeutic interventions using up-to-date scientific evidence and clinical judgment that take into account the intersectionality of a patient's multiple identities and how each identity may present varied and multiple forms of oppression or privilege related to clinical decisions and practice.

SOM Competencies 2022, continued

- 5.3. Demonstrate structural competency by recognizing the structures (policies, practices, and systems) that shape clinical interactions and impact patients' health and by considering structural interventions that address health inequities
- 7.1. Analyze the contributions of the structural and social determinants of health common to the populations of New Mexico to the development and/or continuation of disease and health.
- 7.2. Care and advocate for patients experiencing issues of health inequities in New Mexico, including identifying relevant community resources that promote health equity and improve the health of local communities and populations, and, if appropriate, referring patients to these resources.
