August 5, 1939

**Phimotrips oceanae**

fairy common in the moderately swift riffles.

**Salmo trutta**

abundant in pools. Fingerlings to 9 inch adults. About 20 were released, of these two to fifteen were legal size (6½) or over. Several of these were taken in the head of an irrigation ditch, across Pecos River three miles by road and nine but not straight line) above Pecos, N.M. for about an hour with the 10‘cinew. Stream has about 35 feet wide, 8‘ deep in the riffles and 3½ feet in the pools. Water white, slightly tufeted. 58° F., 877°, 71.1000. Current moderate to strong. Bottom riffles and boulders.

**Catostomus c. commersoni**

found taken from a pool.

**Salmo trutta**

common, all sizes. One released was 16 inches long.

**Salmo gairdneri**

abundant, fingerlings to 9 inch adults. Except for the largest known trout which was in a pool most of the trout were taken from eddies behind rocks in the riffles.
August 5, 1939

Pescos river 1/2 miles SE. stream and road
north of Pescos. The stream at this point is
practically all riffle about 30-40 feet wide
and up to thirty inches deep. The current is
very strong, the bottom of rubble and boulders.
It
started to rain (thunderstorm) just as we
arrived at the place and continued for about half
an hour during which time I fished with an
artiﬁcial nymph. Caught a brown trout about
seven inches long. Secured once the same area
and caught a few, pineneel Salacia twistii and
a few Salacia (foss). All were very small. Std. 71,
Water 58 2 P.M.

Pescos river about one mile below Bruch ranch.

Similiar to places above (the last mentioned)
and below (the other)

Salacia twistii, Salacia gaudichaudi were
taken in small numbers. Released.

A couple of young ﬁsh were caught. They
superficially resemble Rhinichthys callicoma
Sunfishes are said to be found as far up
as Bruch ranch but no higher.
