

June 2, 1954

WJK54-06-02-01

Jenny 3 miles above Guadalupe.

ATW 76 Cloudy & windy.

Pantosteus: fry along shore. Adults spent or nearly so. Some of them seem to have milt but have lost their color. The ♀ are without eggs.

Gila & Rhinichthys are ripe.

Two Gila males from deep fast riffles were very bright. They may have been on the spawning beds.

Collection made. But all specimens soiled. The shaker was used & my technique was inefficient.
