Repeated Mild Traumatic Brain Injuries are Associated with Exacerbated Deficits in Behavior, Cerebral Blood Flow, and Pathology

Have you ever hit your head really hard? You might have had a concussion! Concussions are now considered a mild traumatic brain injury. Usually, when someone gets a concussion, they feel a lot of dizziness and pain in their head. However, having multiple concussions could lead to long-term damage. It may take you longer to recover, and you might not be able to move as swiftly as you once did.
