BLA, RKS Had set 60 shermans and 10 pitfall traps.

9 September 2017 trapline with BLA, RKS

7:20 am weather: 40-55°F, drizzle at night.

morning

clear and cold, trap site (3) peromyscus in sherman, released. (27) peromyscus in sherman, released. (7) sorex monticolus in pitfall.

young fir, grass cover 50%. Spruce-fir overstory.

4% trap success

left camp 9:00 AM.

8 sept. 2018

MLW

Species list:

Sylvilagus nuttalli

Tamias minimus

Sorex monticolus

Tamias quadrivittatus

Neotoma cinerea

Sorex cinereus

Thomomys talpoides

Tamiasciurus hudsonicus

Peromyscus sp.

Spermophilus lateralis

Eptesicus fuscus

Ancillary information:

This was my first time to the Semez area in New Mexico. The drive out to the area has some spectacular red rocks and otherwise beautiful scenery. We passed through different habitats from ABA to the site: desert grass and shrubland, piñon juniper woodland, ponderosa pines and into spruce-fir forest. We were looking for a particular shrew species in the area. With help, I cooked massive amounts of chicken and corn cobs in camp. It was a delicious success.

Road log

48770

left URM at 8:20 AM. ~~SA~~ SA on I-25

Saw a coyote at 48921, in scrubland
went through ~~chihuahuan~~ chihuahuan desert
then Ladrons mts. near ext. 100

49004

at 10:08 AM. stopped and saw

woodrat nest in creosote, mesquite
scrubland

49027

passed thru or consequences, continued
at 11:11 AM.

49042

ext. 63 (R) towards Hillsboro

at 11:23 AM. went through Bluff mts.

49093

reached Mimbres River, saw mine
tailings.

49102

Copper mine, 12:54 PM.

took Rd. 152 and then 180 at

49114

Santa Clara (49108) going west

1:58 PM Albertsons in Gila for
lunch.

49141

entered Natl. Forest, continued onto
dirt road.

49159

arrived camp 4:05 PM.

site description:

Riparian habitat, valley among
Mountains. by Gila River.

one seed Juniper, sycamore, alligator
Juniper, cottonwood, willows.

grass understory. tree cover = 50%.

overstory trees. 50-70 ft tall.

<u>Peromyscus leucopus</u>	9
<u>Peromyscus truei</u>	1

Ancillary information:

First time to Gila River area. There had been a recent burn, and the river had black silt flowing through it. URM Land Arts students were camped nearby, and some took interest in our work. They had made some nature art, sculptures, writings. Cooked Kaxce's chicken pot pie, burned the top because of too many coals on Dutch oven. Adventured to hot springs for bat net check and a welcome midnight soot + star gazing.

On the drive back to Albuquerque, we stopped to view anti-wolf billboards several times, and investigated an ~~an~~ "wolf proof" bus stop.

It was a wooden hut, with piles of trash inside. I doubt it is used as a school bus stop. The billboards read "Balance nature... eat a fetus" which makes no sense, and "Wolves: killing our elk!" which was ironic because of the elk proof fencing around a cattle pasture.

We drove through valleys that had been lake beds in the Pleistocene, and saw hundreds of pronghorn antelope Antilocapra americana. We also drove through the "very large array" of satellite dishes used by astronomers.

Ancillary info:

Ladder Ranch is owned by Ted Turner, the second largest land owner in North America. We met with the conservation biologist on the ranch who talked to us about wolf and Bobson's tortoise reintroduction on the ranch and in New Mexico. One evening, we drove to see the ranch library, and saw wild turkeys and quail on the ranch.

The ranch also has bison. The ranch houses ~~is currently holding~~ wolves to be reintroduced and released elsewhere in New Mexico. It was astonishing how many mammals we caught in the desert area.

MLW

Kevin and Amanda went to help restore an eroded area of the wolf pens elsewhere on the ranch. Nicole, Julie and I prepped stunks together. Julie cut the scent gland, and fortunately I did not do the same. I managed to skin the stunk but finished prepping later.

Margerie and Robert had been opening nesting nests on the trip and collected samples of the insects that transmit chagas disease in New Mexico.
