Mammalogy Fall 2012

Road Log 7 September 2012

- 12:30pm Mile 0. Left Albuquerque on I-25 North.
- 12:56pm Mile 26. Passed our exit. Went off on 248 West, then back onto I-25 South.
- 1:05pm Mile 32. Took exit 242 onto 550 north to Bernalillo/Cuba.
- 1:08pm Mile 33. Stopped at McDonald's in Bernalillo for food/bathroom break.
- 1:12pm Mile 33. Left McDonald's & took 550 North.
- 2:14pm Mile 97. Turned right onto NM 126.
- 2:36pm Mile 107. Turned left onto Forest Road 70.
- 2:42pm Mile 109. Arrived at Clear Creek camp ground, Jemez Mountains, ~~© 2012~~, Santa Fe National Forest.

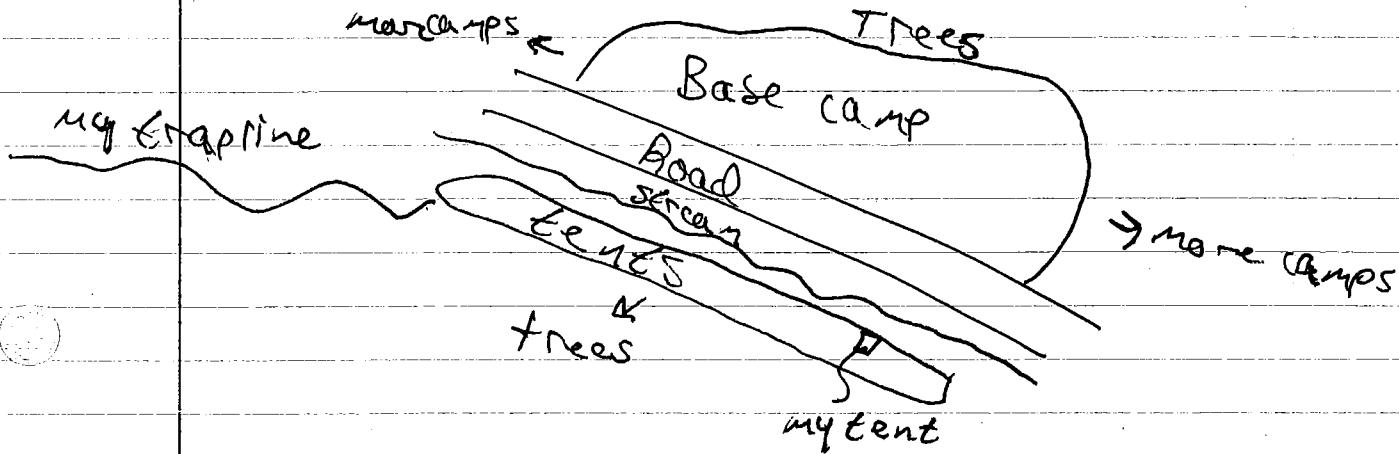

RRS

7 September 2012 - RKS

①

Weather: Partly cloudy (~80% cloud cover) with the occasional sprinkle. We never needed umbrellas or ponchos, and it was often sprinkling and sunny at the same time. It was warm when we arrived ( $-75^{\circ}\text{F}$ ) and stayed warm until sundown when it dropped quickly to  $\sim 45^{\circ}\text{F}$ .

Site description: Ponderosa pine, fir, & spruce forest with occasional aspen stands. The overstory was about 30 ft. up, with taller trees easily reaching 50 ft. The underbrush was mostly small, bushy pines, gooseberry bushes, raspberry bushes, and some other things? bushes. I wish the gooseberries had been in season, I make fantastic gooseberry pies! The ground cover was mostly mixed grasses, clovers, strawberries, & violets. The dining area/base camp were on the top of a hill that had short grass and a mix-field of violets. Down the hill across the road and over a small stream we put the tents up.

7 September 2012-RTS

(2)

2:15pm We arrived at camp. We spent about an hour setting up our tents and base camp. It didn't help as much as I wished it could have because I was borrowing my boyfriend's gear and had never set the tent up by myself before. We then were told about trap setting. There are 5 kinds of traps: Snap traps, Sherman traps, tannahawks, pitfall traps and gopher traps. Snap traps come in 2 types: rat traps and museum specials. Rat traps are for larger rodents like Tamias sp. and Neotoma sp. Museum specials are for smaller mouse-sized rodents like Peromyscus sp. and Chaetodipus sp. Sherman traps are live traps made of solid aluminum sheets with a trapdoor on one side. They can fit creatures up to the size of a large Neotoma, or bigger if they really shove themselves in. They are baited with peanut butter diluted with oats and Sherman's are baited with birdseed that has a touch of peanut butter for the small Tannahawks look like large Shermans made of metal mesh. They are baited depending on what you are trapping, for example bacon grease for ~~Procyonids~~ Procyonids. Pitfall traps are plastic cups put into holes in the ground. They are used to catch shrews and are not baited. Finally, gopher traps are complicated gadgets that are put at the entrances to gopher holes, and when the gopher investigates

RKS

③

7 September 2012-RKS

it is impaled by spikes through the abdomen.

4:00pm BLA and I took 60 Sherman and 10 pitfall traps. We tried to place the Shermans in covered areas, like under bushes and next to fallen logs. We put the pitfalls along "fun ways"; like next to boulders or fallen trees. It was difficult to place the pitfalls because we had a really cruddy shovel with half a handle. We started our trapline uphill and to the side of ~~a~~ where the tents were, and went uphill along a trail. It started in a forest that was mostly short pines. ~~There~~ There were lots of gooseberry and raspberry bushes in this area as well.

This opened into a meadow full of mid-8in high grasses. There was also a plant with a thick central stalk, soft leaves & yellow flowers. It was ~3ft tall and I'm not sure what it was. The meadow was about 25ft across and on the other side was an aspen stand. The stand opened into more short pine forest. We tried to keep our line straight but we had to detour around a large bison with poo ~~on~~ caked on its rear end.

6:00pm We arrived back at camp and sat down around the fire. By 6:30 the temperature had dropped drastically, and I needed my coat even next to the flames.

7:00pm Had dinner of pasta and bread. They were kind enough to make some sauce with no meat for me. Kayce went to

RKS

(4)

7 September 2012 - RKS

Check bat nets several times.

8:54 PM Went with Hayce to check nets. There was one Eptesicus fuscus in the net we caught two total, but I only saw the one.

10:08 PM Went to sleep. I hardly slept because I had brought gear made for warmer weather and I froze my butt off!

RHS

(5)

8 September 2012

Weather: Partly cloudy & chilly ( $\sim 50^\circ\text{F}$ ) in the morning, but warmed up significantly by the early afternoon ( $\sim 65^\circ\text{F}$ ). Hardly any sprinkles and fewer clouds ( $\sim 70\%$ ) than the 7<sup>th</sup>.

6:30 am Was serenaded into wakefulness by Joe. I went to base camp as quickly as I could and got myself some coffee. I'm totally useless without my morning coffee.

7:00 am BLA and I checked our traps. We checked from last to first some wouldn't have to carry full traps as far. We replaced all the full Shermans with fresh ones, but I'm pretty sure we forgot to replace one. We caught 8 Peromyscus and ~~one~~ 1 Tanias. We didn't catch anything in our pitfall traps.

8:30 am Made it back to camp. Breakfast was almost ready. We had breakfast burritos, they were delicious!

10:00 am I began prepping. ~~The~~ Others had been since 9:00 am, but we weren't allowed to prep deer mice which really slowed us down. I started with the pocket gopher. When I got to it all the intestines had already been removed. I started by gently peeling the skin from the muscle. I used COTR dry to soak up any moisture, which helped. When I got to the feet I cut the skin off of the left side and cut the bone at the ankle on the right side. I took some cotton and rolled it into a gopher shaped tube. I put the cotton in the body cavity and then used wire

RKS

8 September 2010 -RKS

⑥

To keep the right feet & legs straight I then wrapped some cotton over the wire and placed it in the tail. I ~~then~~ then sewed the incision shut & pinned it with its two right feet parallel with the body. It came out quite a bit lopsided, but not too bad for a first try! I cut off as much meat from the skeleton as I could, then I tied it into a little bundle with the tail and feet tucked in. I put the skeleton in the carcass bag. Specimen: Thomomys talpoides

12:30pm Sandwiches for lunch. I had Peanut Butter & jelly instead of mystery meat.

1:00pm Helped clean up after lunch. There was 70 hot water so it was hard to get P.B. off of stuff.

1:30pm Prepped a chipmunk. This one was much faster, it only took 2 hours instead of 2 $\frac{1}{2}$ . Specimen: Tamias minimus.

5:40pm BLA and I checked our trapline. MLW came with us because she came up late. We got 2 chipmunks in Sherman traps & replaced them. We also rebaited all of our traps.

6:30 pm I helped chop and cook veggies for Couscous. Finished dinner and ate.

7:50pm Checked nets with Kayce, no bats.

8:30pm Checked nets again. We didn't catch any bats. It was probably because the temp had dropped too low. It was about 35-40°F all night.

10:00pm Went to sleep. I put on all my clothes and was much warmer.

RKS

9 September 2012 -RKS

③

Weather: Partially cloudy (~50% cover) and COLD (~35-40° F). Warmed up pretty quick, it was about 55° by 8:00. Stayed partly cloudy & breezy all day.

6:30 am Joe serenaded us to wakefulness. Started packing my things but my fingers were numb.

6:45 am Went to basecamp and got coffee, which helped my fingers regain feeling.

7:00 am Checked and picked up our traps. Since it was the last day we released any Peromyscus we caught that were still alive. We released two deer mice from Sherman's & caught one Shrew (Apodemus). BCA, MLW and I counted our traps and were short one Sherman. We are fairly certain we forgot to replace one on our first trap check. I went back to look for it just in case and found a deer mouse the big bull had been. It ran away too quickly to be I.D.'d to ~~species~~ species.

8:45 am Returned to basecamp and helped pack up. Broke down my tent & sleeping gear, then packed up the kitchen equipment. We spread out bagels and cream cheese for breakfast.

11:00 am Left camp for ~~the~~ Albuquerque

## ROAD LOG N October 2012

8:20 am Mile 0. Left Albuquerque on I-25 South.

8:59 am Mile 4. Saw a Canis latrans crossing the road.

10:06 am Mile 150. Took exit 100 at Red Rock, took right to head west. We waited for the group that had gone before us as we could caravan.

10:31 am Mile 150. Left again onto I-25 south.

10:44 am Mile 152. Took exit 79 to Truth or Consequences. We stopped at the McDonalds to use the bathrooms and get food.

11:11 am Mile 152. Left Truth or consequences on I-25 south.

11:23 am Mile 165. Took exit 62 to Hillsboro/Silver City. Turned right.

12:09 pm Mile 169. Passed Emory Pass.

12:47 pm Mile 225. Stopped at Chino mine

1:08 pm Mile 237. Stopped at Albertson's in Silver City for lunch.

1:57 pm Mile 237. Turned left onto US 180 West.

2:02 pm Mile 239. Stopped for gas at Snappy Mart.

2:12 pm Mile 241. Left on 14<sup>th</sup> street

2:52 pm Mile 307. Stopped at Steve McDonald's house to pick him up.

2:59 pm Mile 307. Continued on 211 North

4:06 pm Mile 282. Arrived at camp, Turkey creek, Mogollon mountains.

11 October 2012 - RRS

10:06am When we stopped to pick up the group that had left a day early we found a Neotoma nest. It was made around a large, dead bush in a mesquite/creosote scrub area. The nest was built out of many things, including human refuse. There were twigs, combs, candy wrappers and other trash in it. You could distinguish the entrances from dens in the nest because the entrances had scat all over them.

Neotoma can carry hanta and Chagas. Specifically, kissing bugs that carry Chagas disease will take up residence in their nests. This poses risks to humans because Neotoma nests are used to collect piñon ~~and~~ pine seeds.

11:40am As we passed through Hillsboro, NM we began seeing a lot of piñons and juniper. There are 2 types of juniper - one-seeded and alligator. One seeded juniper branches from the base and has stringy bark. Alligator juniper branches higher up from the main trunk and has scaly bark.

11:51am Saw our first ponderosa pines. This means that we were rising in elevation. These were a lot more pines on the northern slopes and the ones that were growing on south-facing slopes looked somewhat scrubbed.

RKS

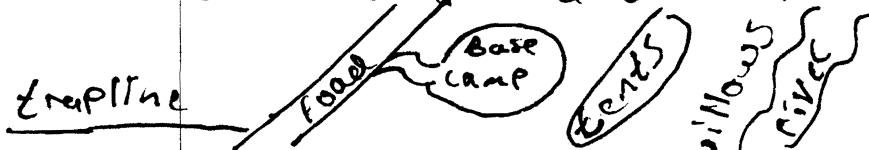

(2)

11 October 2012-RKS

4:05 pm Reached camp.

Weather: ~~overcast~~ Warm and Cloudy, maybe 75°. It got a little chilly as the night went on, but the clouds kept most of the heat in. Some light breezes, but it was fairly still.

Site Description: Camp was sandy with some large cotton woods for shade. There were both cottonwoods and sycamore in the riparian areas around camp. Along the river bank was quite sandy. There were some stands of willow inlets area that were quite dense and had quite a few gopher mounds in them. In the sandier areas there were dunes that had large tufts of grass in them. Some of the grasses had VERY unpleasant seeds. There were gopher mounds in these areas as well. Past the riparian area was a patch of sagebrush habitat. Beyond this we found dry, ~~scrubby~~, sparsely vegetated scrubland. The scrubland was composed mostly of prickly pear, yucca, mesquite, bear grass, and short, dry grasses. It looked like good ~~habitat~~ habitat for heteromysidae, but we didn't catch quite as many as we had hoped. We set up tents between base camp and the river.

11 October 2012 - RKS

2

4:05pm We reached camp. We met up with students from the UNM Land Arts program. They helped us find our camp site. It was fairly warm & dry when we arrived.

4:30pm BLA and I set our trapline. We set 50 Sherman and 30 snap traps. I'm amazed I didn't break my thumb with how many times I snapped it in a rat trap. We went about 50 feet down the road to see our traps. Our line started in Cottonwood/Juniper/Sycamore forest. The canopy was 50-60 ft. up. The understory was mostly Mesquite, tall grasses and fallen leaves. There were also some patches of poison ivy. We then moved into a small open area that had big sick plants in it. They looked like someone had knocked over a bucket of spears and half had fallen out. Several of these had Neotoma nests in them, which we told Marjorie McCand and Robert Nofcivsey about. Our last six stations were at a right angle to our line because we came upon an area of impossibly thick mesquite underbrush, so we had to go along the road. 3 traps were broken.

6:00pm Arrived back at camp. We didn't make it back in time to help with food, so I instead prepped a Neotoma abiguta that had been caught the day before.

RKS

11 October 2012-RKS

④

- 7:30pm Finished the NestZone and ate dinner.  
It was a dumpling stew sort of thing,  
really yummy!
- 8:10pm Went with Ernie to check bat nets.  
They were REALLY far away and I got  
a little confused getting to them. One  
net was over a hot spring someone had  
created a fire around. We went into  
a bat cave and E + found a Myotis  
ciliolabrum sitting on the cave walls.  
Ernie grabbed it with his bare hands  
and put it in a bag. We didn't find  
anything in the nets.
- 10:00pm Bed time! BLA and I decided to share  
a tent, which was nice because it  
kept us warmer.

RKS

(5)

12 October 2012 - RKS

6:20am wake up. Joe serenaded us with songs about Noah's ark. Got coffee as fast as I could.

6:40am We needed GPS units to mark what we trapped, but there were only 3 for all the lines so we had to take turns. I helped with breakfast while I waited.

7:20am Had breakfast burritos.

8:00am Checked our traps. We ~~had~~ didn't bring enough replacement Sherman's so one did not get replaced. We caught one Peromyscus in a snap trap, 6 Peromyscus in Shermans and one Neotoma in a Sherman. We added a snap to our last ~~saw~~<sup>station</sup> since it only had one trap.

9:30am Returned to camp. Since we had such low diversity, Joe decided we would take our traps down later and reset them in a different area. While I waited I set 3 gopher traps on the bank of the river with A J and N H.

11:00am Checked the gopher traps. No luck.

12:15pm Took down our trapline. Marjorie McConnell came with us to look at the Neotoma nests.

1:15pm Got back to camp. Checked the gopher traps. Nada. The wind was starting to pick up and my eyes were getting irritated from all the sand and dust.

RKS

12 October 2012 - RKS ⑥

3:00pm

Setup our second trapline. We went up in elevation to where we had left the small cars with Joe and Kayce. The area was dry and rocky with sparse vegetation. There were mostly bear grass, mesquite, tall grasses, with the occasional gucca and juniper. We set our trap slightly lower until we reached a boundary fence, and then we went along the fence. I got REALLY WINDY up there! There was rabbit scat all over where we set our traplines and several piles of deer scat. Got back to camp. Checked on my gopher traps. Still no luck.

5:00pm

5:30pm

There weren't any specimens for me to prep, so I helped others by getting supplies and shooting away meat-eating wasps.

6:30pm

Helped with dinner.

7:15pm

Dinner was finished. Ate and then checked the gopher traps one last time. Sat around the campfire and played some camp games, like "tag the bag", until ten, then BLA and I went to bed. The night was MUCH colder than the one before and I couldn't get my feet to warm up all night even though I was wearing 3 pairs of socks!

13 October 2012 - RKS

- 6:15am Wake up. I grabbed some coffee quickly because we needed to check our traps early since we were so far away.
- 6:45am Arrived at our trapline. We collected our traps and got 2 Peromyscus in traps. 2 of our traps disappeared and we couldn't find 2 Shermans. Luckily Joe found the station we had missed and we recovered the Shermans.
- 7:45am We got back to camp fairly quickly and had some breakfast.
- 10:30am Prepped a Neotoma albigula, had to fend off the wasps from my carcass.
- 11:50am finished the Neotoma and helped set up lunch. We had boiled eggs & leftovers.
- 12:30pm Ate lunch. Packed up base camp and my gear.
- 2:30pm Left camp. On the way back Joe stopped to take pictures of Ant-Wolf signs and a "wolf-proof" school bus stop. I went inside the bus stop and it was obviously not in use. There was trash heaped inside of it and in disrepair.
- 5:00pm For about 12 miles we saw pronghorn everywhere! We were in a Pleistocene ~~area~~ habitat which had turned into open grasslands. Perfect Antilocapra americana habitat. We probably saw close to 200 total, but they were mostly in groups of 2-15.
- Weather: Cool (~45°) in the early morning, warmed up to ~75° by 9:30 am. No clouds and a slight breeze.

## Road Log - 27 October 2012

5:00am Mile 0. Left Albuquerque on I-25 South.

7:35 Mile 161. Took exit 63 towards Pinetop. Got onto NM-182 South.

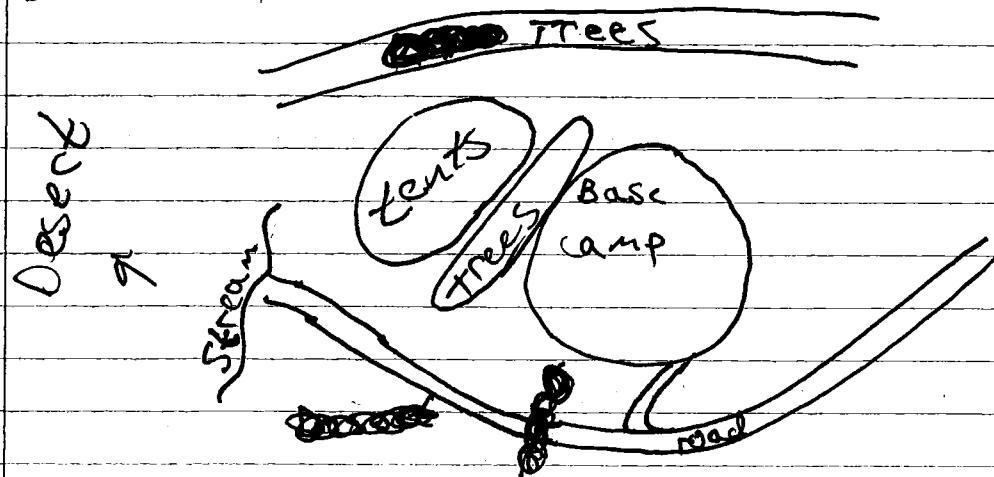

7:50 Mile 169. Turned Right onto Ladder Ranch road.

8:00 Mile 175. Reached Base camp at Ladder Ranch,  
Sierra County, New Mexico.

27 October 2012 - RKS

Weather: It was cool ( $\sim 65^{\circ}\text{F}$ ) when we arrived, but warmed up significantly ( $\sim 75^{\circ}\text{F}$ ) by 9:00. The day stayed warm with slight intervals of breezes all day. At dusk the temperature dropped significantly ( $\sim 45^{\circ}\text{F} - 55^{\circ}\text{F}$ ). It was mostly sunny, though some wispy clouds did blow through in the middle of the day. They provided a little respite from the sun.

Site description: Camp was a large, grassy, bare area in the middle of a riparian forest. At camp there were several short, green grasses growing. The forest around camp was about 40-50 ft up and composed mostly of cottonwoods and sycamore, but there were also some oaks and willows. Outside the riparian area there was a large stretch of <sup>relatively</sup> sparsely vegetated desert. It was mostly made of short, scrubby plants like Mormon tea, mesquite, prickly pears and grasses. At the base of almost every prickly pear was a Heteronychidae hole. We pitched tents close to base camp behind a screen of trees.

27 October 2012 - RKS

8:00am Arrived at Ladder Ranch campsite just in time to have some breakfast burritos! I drove down with K M the day after the rest of the group had gone.

9:00am K M and I went with Joe to help check his trapline. We got 8 specimens - Some kangaroo rats, Spiny pocket mice, smooth pocket mice and wood rats.

- forgot to mention! K M and I got lost on our way to camp because we passed it! It was well hidden behind some trees, that's my story. It was interesting though because we got to see how abruptly the habitat goes from desert to riparian.

From the top of a hill we crested we could see a marked line where the desert ended and the trees started.

10:00am Got back to camp, prepped a Thomomys bottae.

11:30am Prepped a Dipodomys merriami.

12:00pm Sandwiches for lunch. I didn't eat until I finished my kangaroo rat.

1:00pm ate. Woman came and asked for help w/ wolf pens.

1:30pm prepped a Chaetodipus intermedius.

~~2:00pm Went to Ladder Ranch library~~

4:00pm Went on a tour of ladder ranch. They have areas where they grow crops specifically for the wildlife and we saw elk, mule deer, white-tailed deer, and wild turkeys! After that we went to their library and read and were told about the history of Ladder Ranch.

6:00pm Got back to camp. I had been cooking beans since 10:30 am for critter stew!

RKS

27 October 2012 - RKS

(3)

6:15pm Prepped a Neotoma albigena in the dark while people cooked.

7:30pm Finished the Neotoma since most people were opposed to critters in the stew, John Durham fried them in some spices on the side.

8:00pm Dinner! We cooked up gophers, K-rats, pocket mice, and a chipmunk. Except for the gopher they all tasted pretty similar, but I think the chipmunk was best. Very tasty! The gopher was odd because it was all dark meat. It wasn't bad, but it had a strong, strange, gamey taste. I wasn't a fan.

9:00pm Went with a big group to check bat nets. No bats, ~~but~~ maybe it got too cold. The nets were quite a ways away from camp so it took a long time to get there and back, especially because I'm pretty sure Brian got us fairly lost on the way back.

10:00pm Got back to camp and told stories around the campfire until sleep.

11:30pm Went to bed.

RKS

28 October 2012 - RKS

(4)

Weather: chilly (~40° until ~9:30), then warmed up to ~70°-75° F. It was slightly breezy but sunny and nice.

6:30 am wake up call. As per usual I ran for coffee. Since I didn't have a trap like I spent the morning helping to pack up the kitchen and base camp. I froze my hands off trying to wash dishes! Left Ladder Ranch in one of the UNM vans.

10:50 am
