San Juan county, this territory, will double its population next year.

One-fourth the population of this city is gadding about over the country.

The mining camp of Telluride, Colorado, does not appear to be capable of self-government.

What a wonderful era of generosity and good will to institutions of learning is that of the present, says the New York Tribune. The ambitious boy or girl who desires a college training these days in any part of the country experiences far less difficulty in obtaining it than did the generation of thirty years ago. If there are any Abraham Lincolns at Sumner, they need not confine their studies to law, but need not confine their studies to law, but need not confine their studies to law.

WAR INTERNAL REVENUE.

A compilation made at the internal revenue bureau shows that there was collected under the war revenue act during the fiscal year, which ended Sunday at midnight, \$307,566,116.88. The commissioner of internal revenue estimated for congress that the reductions made at the last session in the war revenues will amount to \$10,000,000 per annum. However, the increased production of whiskey, cigars, tobacco and other taxable articles has been such as to offset the reduction in the war revenue next year will not exceed \$20 million dollars. The war revenue act went into effect July 1, 1908. The collections have been enormous: in 1899, \$274,481,572; in 1900, \$295,314,107; in 1901, \$307,536,316.

According to the estimates of the New York Mining and Engineering Journal, which are based on a rule on the most reliable data obtainable, the total value of the mineral output

There was an increased production of both during 1900 as compared with the value of the output of 1900. The increase in the output of coal amounted to 6 per cent.

The output of copper, which is the third on the list, was nearly the same as in the previous year. The demand for this metal has, however, continued steadily to increase. The price of the metal has, consequently, been well maintained through the year, and is so still. The field of applied electricity is broadening so rapidly and extensively that there is at present no immediate prospect of the supply and demand of copper being equalized. Last year's copper production is put down at \$7,755,449.
