CONTRIBUTOR TO THIS ISSUE

Dr. David Gebhard, a frequent contributor to the magazine, is Director of the Art Gallery, University of California, Santa Barbara. A trained architect as well as art historian, Dr. Gebhard has particular interest in American architecture of the early twentieth century. Formerly a member of the faculty at the University of New Mexico and later Director of the Roswell Museum and Art Center, Dr. Gebhard was for over a year the Editor of the New Mexico Architect. As editor, he instituted a series of articles in the magazine on historical aspects of New Mexican architecture.

new mexico architecture

Published bi-monthly by the New Mexico Society of Architects American Institute of Architects, a non-profit organization, at 301-D Graceland Drive S.E., Albuquerque, New Mexico.

Editorial correspondence: All correspondence should be addressed to John P. Conron, P. O. Box 935, Santa Fe, New Mexico. No responsibility will be assumed by the editor or publishing organization for unsolicited contributions. Return postage should accompany all unsolicited manuscripts.

Intriguing designs and long spans are readily achieved with concrete barrel shells. Long barrel shells are those which have a small chord compared to span. (Short barrels have large chords compared to span.)

To achieve full shell action (a membrane free of bending moments), support is required along the two curved edges as well as along the straight edges, as shown in the diagram below. In practice, however, the straight edges are never fully restrained so that some small bending moments in the shell must be considered in the design.

The stiffeners along the curved edges usually consist of arch-type ribs or diaphragms spanning between the supporting columns. Cantilevers are easily achieved; thus the visible shell edge can be as thin as the basic shell. Write for further free information. (U.S. and Canada only.)
Strength ... lasting beauty and versatility ... with Inlai precast concrete exposed aggregate facing panels

Manufactured in Albuquerque with Otto's superior facilities, Inlai precast concrete panels give the architect an unlimited selection of color and texture imparting an individual personality to each building.
