Paper Manufacturers In Queretaro State Open Modern Waste Water Treatment Plant

Published: Wednesday, October 2, 1991

Two paper manufacturers based in Queretaro state recently announced the opening of a new waste water treatment plant, described as one of the most "modern" in Latin America. The five-year construction project cost over $4 million. Cartones Ponderosa and Empaques Ponderosa produce a variety of paper products, including cardboard boxes and related packaging materials. The new plant uses sand and glass to separate pollutants from waste water. Solid pollutants are to be transported to sanitary landfills, and isolated so as to prevent contamination of the water table. The remaining waste liquid will then be processed with bacteria, and finally, used in irrigation projects. (Source: El Financiero International, 09/23/91)
