**Abstract:** The intention to study the idea of Generalized Topological Spaces by means of Neutrosophic sets leads to develop this article. In this write up we launch new ideas on  $\lambda_N$ -Topological Spaces. We study some of its characteristics and behaviours of  $\lambda_N$ - $\alpha$ -irresolute function,  $\lambda_N$ -semi-irresolute function and  $\lambda_N$ -pre-irresolute function. Also we discuss the above for contra  $\lambda_N$ -irresolute functions and derived some relations between them.

# 2010 Mathematics Subject Classification: 54A05, 54B05, 54D10

**Keywords:**  $\lambda_N$ - $\alpha$ -irresolute function,  $\lambda_N$ -semi-irresolute function,  $\lambda_N$ -pre-irresolute function, contra  $\lambda_N$ - $\alpha$ -irresolute function, contra  $\lambda_N$ -semi-irresolute function, contra  $\lambda_N$ -pre-irresolute function.

# 1. Introduction

Zadeh [16] initiated fuzzy set theory in 1965 that deals with uncertainty in real life situations. Chang [2] designed fuzzy topology that gave a special note to the field of topology in 1968. Attanassov [1] in 1983, see the sights of intuitionistic fuzzy sets by considering both membership and non-membership of the elements. In 1997, Coker [4] worked on Intuitionistic fuzzy sets by extending the concepts of fuzziness and found a place for Intuitionistic fuzzy topological space.

Smarandache [5] to [7] & [14] introduced Neutrosophic set which is a generalization of fuzzy set and intuitionistic fuzzy set. This is a strong tool to discuss about the existence of incomplete, indeterminate and inconsistent information in the real life situation. Smarandache focused his observations en route for the degree of indeterminacy that directed into Neutrosophic Sets (NS). Soon after, Salama and Albowi [10] familiarized Neutrosophic Topological Spaces (NTS). Further, Salama, Smarandache and Valeri Kromov

[11] presented the continuous (Cts) functions in NTS. In [3], irresolute functions was introduced and analysed by Crossley and Hildebrand in Topological Spaces. Further, Vijaya [13] and Santhi [12] investigated the properties of  $\lambda$ - $\alpha$ -irresolute function and contra  $\lambda$ - $\alpha$ -irresolute function in Generalized Topological Spaces. In addition to that, properties of  $\alpha$ -irresolute function and contra  $\alpha$ -irresolute function in Nano Topological Spaces was look over by Yuvarani and et. al., [15]. By keeping all these works as a motivation, in 2020, Raksha Ben, Hari Siva Annam [8] & [9] contrived  $\lambda$ <sub>N</sub>-Topological Space and deliberated its properties.

In this disquisition, we explore our perception of  $\lambda_N$ - $\alpha$ -irresolute function,  $\lambda_N$ -semi-irresolute function,  $\lambda_N$ -pre-irresolute function, contra  $\lambda_N$ - $\alpha$ -irresolute function, contra  $\lambda_N$ -semi-irresolute function, contra  $\lambda_N$ -pre-irresolute function and we have scrutinized about some of their basic properties. At every place the novel notions have been validated with apposite paradigms.

## 2. Prerequisites

#### 2.1. Definition [10]

Let  $\Omega$  be a non-empty fixed set. A NS,  $E = \{ \langle \omega, M_E(\omega), I_E(\omega), N_E(\omega) \rangle : \omega \in \Omega \}$  where  $M_E(\omega)$ , I<sub>E</sub> ( $\omega$ ) and N<sub>E</sub> ( $\omega$ ) represents the degree of membership, indeterminacy and non-membership functions respectively of every element  $\omega \in \Omega$ .

#### 2.2. Remark [10]

A NS, E can be recognized as a structured triple E = {  $\langle \omega, M_E(\omega), I_E(\omega), N_E(\omega) \rangle$  :  $\omega \in \Omega$ } in

## ] -0, 1 +[ on Ω.

#### 2.3. Remark [10]

The NS,  $0_N$  and  $1_N$  in  $\Omega$  is defined as

- (P<sub>1</sub>)  $0_{N} = \{ \langle \omega, 0, 0, 1 \rangle : \omega \in \Omega \}$
- $(\mathbf{P}_2) \quad \mathbf{0}_{\mathsf{N}} = \{ \langle \omega, 0, 1, 1 \rangle : \omega \in \Omega \}$
- (P<sub>3</sub>)  $0_N = \{ \langle \omega, 0, 1, 0 \rangle : \omega \in \Omega \}$
- $(\mathbf{P}_4) \quad \mathbf{0}_{\mathsf{N}} = \{ \langle \omega, 0, 0, 0 \rangle : \omega \in \Omega \}$
- (P<sub>5</sub>)  $1_{N} = \{ \langle \omega, 1, 0, 0 \rangle : \omega \in \Omega \}$
- (P<sub>6</sub>)  $1_{N} = \{ \langle \omega, 1, 0, 1 \rangle : \omega \in \Omega \}$
- (P<sub>7</sub>)  $1_{N} = \{ \langle \omega, 1, 1, 0 \rangle : \omega \in \Omega \}$
- (P<sub>8</sub>)  $1_{N} = \{ \langle \omega, 1, 1, 1 \rangle : \omega \in \Omega \}$

## 2.4. Definition [10]

If  $E = \{ \langle M_E(\omega), I_E(\omega), N_E(\omega) \rangle \}$ , then the complement of E on  $\Omega$  is

- (P9)  $E' = \{ \langle \omega, 1 M_E(\omega), 1 I_E(\omega) \text{ and } 1 N_E(\omega) \rangle : \omega \in \Omega \}$
- (P<sub>10</sub>)  $E' = \{ \langle \omega, N_E(\omega), I_E(\omega) \text{ and } M_E(\omega) \rangle : \omega \in \Omega \}$
- (P11)  $E' = \{ \langle \omega, N_E(\omega), 1 I_E(\omega) \text{ and } M_E(\omega) \rangle : \omega \in \Omega \}$

124

#### 2.5. Definition [10]

Let  $\Omega$  be a non-empty set and let  $E = \{ \langle \omega, M_E(\omega), I_E(\omega), N_E(\omega) \rangle : \omega \in \Omega \}$  and  $F = \{ \langle \omega, M_F(\omega), I_F(\omega), N_F(\omega) \rangle : \omega \in \Omega \}$ . Then

- (i)  $E \subseteq F \Rightarrow M_{E}(\omega) \le M_{F}(\omega), I_{E}(\omega) \le I_{F}(\omega), N_{E}(\omega) \ge N_{F}(\omega), \forall \omega \in \Omega$
- (ii)  $E \subseteq F \Rightarrow M_{E}(\omega) \le M_{F}(\omega), I_{E}(\omega) \ge I_{F}(\omega), N_{E}(\omega) \ge N_{F}(\omega), \forall \omega \in \Omega$

### 2.6. Definition [10]

Let  $\Omega$  be a non-empty set and  $E = \{ \langle \omega, M_E(\omega), I_E(\omega), N_E(\omega) \rangle : \omega \in \Omega \}$ ,  $F = \{ \langle \omega, M_F(\omega), I_F(\omega), N_F(\omega) \rangle : \omega \in \Omega \}$  are NSs. Then,

- $(P_{12}) \quad E \cap F = \left\langle \omega, M_{E}(\omega) \land M_{F}(\omega), I_{E}(\omega) \lor I_{F}(\omega), N_{E}(\omega) \lor N_{F}(\omega) \right\rangle$
- $(P_{13}) \quad E \cap F = \left\langle \omega, M_{E}(\omega) \land M_{F}(\omega), I_{E}(\omega) \land I_{F}(\omega), N_{E}(\omega) \lor N_{F}(\omega) \right\rangle$
- $(P_{14}) \quad E \cup F = \left\langle \omega, M_{E}(\omega) \lor M_{F}(\omega), I_{E}(\omega) \land I_{F}(\omega), N_{E}(\omega) \land N_{F}(\omega) \right\rangle$
- (P15)  $E \cup F = \langle \omega, M_E(\omega) \lor M_F(\omega), I_E(\omega) \lor I_F(\omega), N_E(\omega) \land N_F(\omega) \rangle$

## 2.7. Definition [9]

Let  $\Omega \neq \phi$ . A family of Neutrosophic subsets of  $\Omega$  is  $\lambda N$ -topology if it satisfies

 $(\Delta_1) \quad 0_N \in \lambda_N \qquad (\Delta_2) \quad E_1 \cup E_2 \in \lambda_N \text{ for any } E_1, E_2 \in \lambda_N.$ 

#### 2.8. Remark [9]

Members of  $\lambda_N$ -topology are  $\lambda_N$ -Open Sets ( $\lambda_N$ -OS) and their complements are  $\lambda_N$ -Closed Sets ( $\lambda_N$ -CS).

#### 2.9. Definition [9]

Let  $(\Omega, \lambda_N)$  be a  $\lambda_N$ -TS and E = {  $\langle \omega, M_E(\omega), I_E(\omega), N_E(\omega) \rangle$  } be a NS in  $\Omega$ . Then

 $\lambda_{N}$ -Closure (E) =  $\bigcap \{F: E \subseteq F, F \text{ is } \lambda_{N}$ -CS}

 $\lambda_{N}$ -Interior (E) =  $\bigcup \{G: G \subseteq E, G \text{ is } \lambda_{N}$ -OS}

## 2.10. Definition [8]

A NS, E in  $\lambda_N$ -TS is said to be

(i)  $\lambda_N$ -Semi-Open Set ( $\lambda_N$ -SOS) if  $E \subseteq \lambda_N$ -Cl( $\lambda_N$ -Int(E)),

- (ii)  $\lambda$ N-Pre-Open Set ( $\lambda$ N-POS) if  $E \subseteq \lambda$ N-Int( $\lambda$ N-Cl(E)),
- (iii)  $\lambda_N \alpha$ -Open Set ( $\lambda_N \alpha OS$ ) if  $E \subseteq \lambda_N$ -Int( $\lambda_N$ -Cl( $\lambda_N$ -Int(E))).

## 2.11. Lemma [8]

Every  $\lambda N$ -  $\alpha OS$  is  $\lambda N$ -SOS and  $\lambda N$ -POS.

## 2.12. Definition [8]

Let the function h:  $(\Omega_1, \tau_1) \rightarrow (\Omega_2, \tau_2)$  is defined to be  $\lambda_N$ -Cts (resp.  $\lambda_N$ -SCts,  $\lambda_N$ -PCts,  $\lambda_N$ - $\alpha$ Cts) if the inverse image of  $\lambda_N$ -CS in  $(\Omega_2, \tau_2)$  is a  $\lambda_N$ -CS (resp.  $\lambda_N$ -SCS,  $\lambda_N$ -PCS,  $\lambda_N$ - $\alpha$ CS) in  $(\Omega_1, \tau_1)$ .

#### 3. $\lambda_N$ -Irresolute Functions

## 3.1. Definition

Let  $(\Omega_1, \tau_1)$  and  $(\Omega_2, \tau_2)$  be  $\lambda_N$ -TSs. Then h:  $\Omega_1 \rightarrow \Omega_2$  is said to be a  $\lambda_N$ - $\alpha$ -irresolute function (resp.  $\lambda_N$ -semi-irresolute,  $\lambda_N$ -pre-irresolute) if the inverse image of every  $\lambda_N$ - $\alpha$ OS (resp.  $\lambda_N$ -SOS,  $\lambda_N$ -POS) in  $(\Omega_2, \tau_2)$  is an  $\lambda_N$ - $\alpha$ OS (resp.  $\lambda_N$ -SOS,  $\lambda_N$ -POS) in  $(\Omega_1, \tau_1)$ .

#### 3.2. Example

Let h:  $(\Omega_1, \tau_1) \rightarrow (\Omega_2, \tau_2)$  be defined as h(p) = s and h(q) = r, where  $\Omega_1 = \{p, q\}$  and  $\Omega_2 = \{r, s\}$ ,  $\tau_1 = \{0_N, A, B\}, \tau_2 = \{0_N, C, D\}.$ 

(i)  $A = \langle (0.2, 0.8, 0.9), (0.1, 0.7, 0.8) \rangle$ , $B = \langle (0.3, 0.5, 0.6), (0.4, 0.6, 0.7) \rangle$ , $C = \langle (0.1, 0.7, 0.8), (0.2, 0.8, 0.9) \rangle$ , $D = \langle (0.4, 0.6, 0.7), (0.3, 0.5, 0.6) \rangle$ , $G = \langle (0.3, 0.7, 0.8), (0.2, 0.6, 0.7) \rangle$ , $H = \langle (0.2, 0.6, 0.7), (0.3, 0.7, 0.8) \rangle$ .

Here {0<sub>N</sub>, A, B, G} and {0<sub>N</sub>, C, D, H} are  $\lambda_N$ - $\alpha$ OS of ( $\Omega_1$ ,  $\tau_1$ ) and ( $\Omega_2$ ,  $\tau_2$ ) respectively. Hence, h is a  $\lambda_N$ - $\alpha$ -irresolute function.

(ii)	A = $\langle (0.3, 0.7, 0.8), (0.2, 0.6, 0.8) \rangle$ ,	$B = \left< (0.4,  0.6,  0.7),  (0.5,  0.5,  0.6) \right>,$
	C = $\langle (0.5, 0.5, 0.6), (0.4, 0.6, 0.7) \rangle$ ,	$D = \left< \left( 0.2,  0.6,  0.8 \right), \left( 0.3,  0.7,  0.8 \right) \right>,$
	G = $\langle (0.3, 0.7, 0.8), (0.4, 0.5, 0.7) \rangle$ ,	H = $\langle (0.4, 0.5, 0.7), (0.3, 0.7, 0.8) \rangle$ .

Here {0<sub>N</sub>, A, B, G} and {0<sub>N</sub>, C, D, H} are  $\lambda_N$ -SOS of ( $\Omega_1$ ,  $\tau_1$ ) and ( $\Omega_2$ ,  $\tau_2$ ) respectively. Therefore, h is a  $\lambda_N$ -semi-irresolute function.

Here {0<sub>N</sub>, A, B, G, H} and {0<sub>N</sub>, C, D, I, J} are  $\lambda_N$ -POS of ( $\Omega_1$ ,  $\tau_1$ ) and ( $\Omega_2$ ,  $\tau_2$ ) respectively and so h is a  $\lambda_N$ -pre-irresolute function.

## 3.3. Theorem

Let  $(\Omega, \tau)$  be a  $\lambda N$ -TS and E  $\subseteq \Omega$ . Then E is  $\lambda N$ - $\alpha OS$  iff it is  $\lambda N$ -SOS and  $\lambda N$ -POS.

#### **Proof:**

If E is  $\lambda_{N-\alpha}OS$ , then by Lemma 2.11, E is  $\lambda_{N}$ -SOS and  $\lambda_{N}$ -POS. Conversely if E is  $\lambda_{N}$ -SOS and  $\lambda_{N}$ -POS, then E  $\subseteq \lambda_{N}$ -Cl( $\lambda_{N}$ -Int(E)) and E  $\subseteq \lambda_{N}$ -Int( $\lambda_{N}$ -Cl(E)). Therefore  $\lambda_{N}$ -Int( $\lambda_{N}$ -Cl(E))  $\subseteq \lambda_{N}$ -Int( $\lambda_{N}$ -Cl( $\lambda_{N}$ -Cl( $\lambda_{N}$ -Int(E)))) =  $\lambda_{N}$ -Int( $\lambda_{N}$ -Cl( $\lambda_{N}$ -Int( $\lambda_{N}$ -Cl( $\lambda_{N}$ -Int( $\lambda_{N}$ -Cl(E)))  $\subseteq \lambda_{N}$ -Int( $\lambda_{N}$ -Cl( $\lambda_{N}$ -Int(E))). Also E  $\subseteq \lambda_{N}$ -Int( $\lambda_{N}$ -Cl(E))  $\subseteq \lambda_{N}$ -Int( $\lambda_{N}$ -Cl( $\lambda_{N}$ -Int(E))). Thus E is  $\lambda_{N}$ - $\alpha$ OS.

#### 3.4. Theorem

Let h:  $\Omega_1 \rightarrow \Omega_2$  be a function, where  $(\Omega_1, \tau_1)$  and  $(\Omega_2, \tau_2)$  be  $\lambda_N$ -TSs. Then the succeeding are equivalent.

- (i) h is  $\lambda N \alpha$ -irresolute.
- (ii)  $h^{-1}(E)$  is  $\lambda_N \alpha CS$  in  $(\Omega_1, \tau_1)$ , for every  $\lambda_N \alpha CS E$  in  $(\Omega_2, \tau_2)$ .
- (iii)  $h(\lambda N \alpha Cl(E)) \subseteq \lambda N \alpha Cl(h(E)) \forall E \subseteq \Omega_1.$
- (iv)  $\lambda_{N-\alpha}Cl(h^{-1}(E)) \subseteq h^{-1}(\lambda_{N-\alpha}Cl(E)) \forall E \subseteq \Omega_2.$
- (v)  $h^{-1}(\lambda_N \alpha Int(E)) \subseteq \lambda_N \alpha Int(h^{-1}(E)) \quad \forall E \subseteq \Omega_2.$
- (vi) h is  $\lambda_{N-\alpha}$ -irresolute for every  $\omega \in (\Omega_1, \tau_1)$ .

#### Proof

(i) implies (ii) It is obvious.

(ii) implies (iii) Let  $E \subseteq \Omega_1$ . In that case,  $\lambda_N - \alpha Cl(h(E))$  is a  $\lambda_N - \alpha CS$  of  $(\Omega_2, \tau_2)$ . By (ii), h<sup>-1</sup>( $\lambda_N - \alpha Cl(h(E))$ ) is a  $\lambda_N - \alpha CS$  in  $(\Omega_1, \tau_1)$ , and  $\lambda_N - \alpha Cl(E) \subseteq \lambda_N - \alpha Cl(h^{-1}h(E)) \subseteq \lambda_N - \alpha Cl(h^{-1}(\lambda_N - \alpha Cl(h(E)))) = h^{-1}(\lambda_N - \alpha Cl(h(E)))$ . So  $h(\lambda_N - \alpha Cl(E)) \subseteq \lambda_N - \alpha Cl(h(E))$ .

(iii) implies (iv) Let  $E \subseteq \Omega_2$ . By (iii),  $h(\lambda_N - \alpha Cl(h^{-1}(E))) \subseteq \lambda_N - \alpha Cl(hh^{-1}(E)) \subseteq \lambda_N - \alpha Cl(E)$ . So  $\lambda_N - \alpha Cl(h^{-1}(E)) \subseteq h^{-1}(\lambda_N - \alpha Cl(E))$ .

(iv) implies (v) Let  $E \subseteq \Omega_2$ . By (iv),  $h^{-1}(\lambda_N - \alpha Cl(\Omega_2 - E)) \supseteq \lambda_N - \alpha Cl(h^{-1}(\Omega_2 - E)) = \lambda_N - \alpha Cl(\Omega_1 - h^{-1}(E))$ . Since  $\Omega_1 - \lambda_N - \alpha Cl(\Omega_1 - E) = \lambda_N - \alpha Int(E)$ , subsequently  $h^{-1}(\lambda_N - \alpha Int(E)) = h^{-1}(\Omega_2 - \lambda_N - \alpha Cl(\Omega_2 - E)) = \Omega_1 - h^{-1}(\lambda_N - \alpha Cl(\Omega_2 - E)) \subseteq \Omega_1 - \lambda_N - \alpha Cl(\Omega_1 - h^{-1}(E)) = \lambda_N - \alpha Int(h^{-1}(E))$ .

(v) implies (vi) Let E be any  $\lambda_N - \alpha OS$  of  $(\Omega_2, \tau_2)$ , subsequently  $E = \lambda_N - \alpha Int(E)$ . By (v),  $h^{-1}(E) = h^{-1}(\lambda_N - \alpha Int(E)) \subseteq \lambda_N - \alpha Int(h^{-1}(E)) \subseteq h^{-1}(E)$ . So,  $h^{-1}(E) = \lambda_N - \alpha Int(h^{-1}(E))$ . Thus,  $h^{-1}(E)$  is a  $\lambda_N - \alpha OS$  of  $(\Omega_1, \tau_1)$ . Therefore, h is  $\lambda_N - \alpha$ -irresolute.

(i) implies (vi) Let h be  $\lambda_{N-\alpha}$ -irresolute,  $\omega \in (\Omega_1, \tau_1)$  and any  $\lambda_{N-\alpha}OS \in Of(\Omega_2, \tau_2)$ ,  $\ni h(\omega) \subseteq E$ . Then  $\omega \in h^{-1}(E) = \lambda_N - \alpha Int(h^{-1}(E))$ . Let  $F = h^{-1}(E)$  followed by F is a  $\lambda_{N-\alpha}OS$  of  $(\Omega_1, \tau_1)$  and so  $h(F) = hh^{-1}(E) \subseteq E$ . Thus, h is  $\lambda_{N-\alpha}$ -irresolute for each  $\omega \in (\Omega_1, \tau_1)$ .

(vi) implies (i) Let E be a  $\lambda_{N-\alpha}OS$  of  $(\Omega_2, \tau_2)$ ,  $\omega \in h^{-1}(E)$ . Then  $h(\omega) \in E$ . By hypothesis there exists a  $\lambda_{N-\alpha}OS$  F of  $(\Omega_1, \tau_1) \ni \omega \in F$  and  $h(F) \subseteq E$ . Thus  $\omega \in F \subseteq h^{-1}(h(F)) \subseteq h^{-1}(E)$  and  $\omega \in F = \lambda_{N-\alpha}Int(F) \subseteq \lambda_{N-\alpha}Int(h^{-1}(E)) \implies h^{-1}(E) \subseteq \lambda_{N-\alpha}Int(h^{-1}(E))$ . Hence  $h^{-1}(E) = \lambda_{N-\alpha}Int(f^{-1}(E))$ . Thus, h is  $\lambda_{N-\alpha}$ -irresolute.

## 3.5. Theorem

Let h:  $\Omega_1 \rightarrow \Omega_2$  be a bijective function, where  $(\Omega_1, \tau_1)$  and  $(\Omega_2, \tau_2)$  be  $\lambda_N$ -TSs. Then h is  $\lambda_N$ - $\alpha$ -irresolute iff  $\lambda_N$ - $\alpha$ Int(h(E))  $\subseteq$  h( $\lambda_N$ - $\alpha$ Int(E))  $\forall E \subseteq \Omega_1$ .

# Proof

Let  $E \subseteq \Omega_1$ . By Theorem 3.4 and since h is bijective,  $h^{-1}(\lambda_N - \alpha Int(h(E))) \subseteq \lambda_N - \alpha Int(h(E))) = \lambda_N - \alpha Int(E)$ . So,  $hh^{-1}(\lambda_N - \alpha Int(h(E))) \subseteq h(\lambda_N - \alpha Int(E))$ . Consequently  $\lambda_N - \alpha Int(h(E)) \subseteq h(\lambda_N - \alpha Int(E))$ .

Conversely, let E be a  $\lambda_N \cdot \alpha OS$  of  $(\Omega_2, \tau_2)$ . Then E =  $\lambda_N \cdot \alpha Int(E)$ . By hypothesis,  $h(\lambda_N \cdot \alpha Int(h^{-1}(E))) \supseteq \lambda_N \cdot \alpha Int(h(h^{-1}(E))) = \lambda_N \cdot \alpha Int(E) = E$  implies  $h^{-1}h(\lambda_N \cdot \alpha Int(h^{-1}(E))) \supseteq h^{-1}(E)$ . Since h is bijective,  $\lambda_N \cdot \alpha Int(h^{-1}(E)) = h^{-1}h(\lambda_N \cdot \alpha Int(h^{-1}(E))) \supseteq h^{-1}(E)$ .

Hence  $h^{-1}(E) = \lambda N - \alpha Int(h^{-1}(E))$ . So  $h^{-1}(E)$  is  $\lambda N - \alpha OS$  of  $(\Omega_1, \tau_1)$ . Thus, h is  $\lambda N - \alpha$ -irresolute.

## 3.6. Lemma

Let  $(\Omega, \tau)$  be a  $\lambda_N$ -TS and  $E \subset \Omega$ . Then  $\lambda_N - \alpha Int(E) = E \bigcap \lambda_N - Int((\lambda_N - Cl(\lambda_N - Int(E))), \lambda_N - \alpha Cl(E) = E \bigcup \lambda_N - Cl(\lambda_N - Int(\lambda_N - Cl(E))).$ 

## 3.7. Lemma

Let  $(\Omega, \tau)$  be a  $\lambda$ N-TS, then

(i)  $\lambda_{N-\alpha}Cl(E) \subseteq \lambda_{N-Cl}(E) \forall E \subseteq \Omega$ .

(ii)  $\lambda_{N-Cl}(E) = \lambda_{N-\alpha}Cl(E) \quad \forall E \subseteq \Omega$  where E is  $\lambda_{N-\alpha}OS$ .

## Proof

(i) Let  $E \subseteq \Omega$ . Since  $\lambda_N$ -Int(E)  $\subseteq \lambda_N$ - $\alpha$ Int(E),  $U-\lambda_N$ -Int(E)  $\supseteq U-\lambda_N-\alpha$ Int(E). Hence  $\lambda_N-\alpha$ Cl(E)  $\subseteq \lambda_N$ -Cl(E).

(ii) Let E be any  $\lambda_N - \alpha OS$  of  $(\Omega, \tau)$ , then  $E \subseteq \lambda_N - Int(\lambda_N - Cl(\lambda_N - Int(E)))$ . Then  $\lambda_N - Cl(E) \subseteq \lambda_N - Cl(\lambda_N - Int(\lambda_N - Cl(\lambda_N - Int(E)))) = \lambda_N - Cl(\lambda_N - Int(E)) \subseteq \lambda_N - Cl(\lambda_N - Int(\lambda_N - Cl(E)))$ . So,  $\lambda_N - Cl(E) \subseteq E \bigcup \lambda_N - Cl(\lambda_N - Int(\lambda_N - Cl(E)))$ . By Lemma 3.6,  $\lambda_N - Cl(E) \subseteq \lambda_N - \alpha Cl(E)$ . By (i),  $\lambda_N - \alpha Cl(E) \subseteq \lambda_N - Cl(E)$ , therefore  $\lambda_N - Cl(E) = \lambda_N - \alpha Cl(E)$ .

## 3.8. Theorem

Let h:  $\Omega_1 \rightarrow \Omega_2$  be a  $\lambda_N$ - $\alpha$ -irresolute function, where ( $\Omega_1$ ,  $\tau_1$ ) and ( $\Omega_2$ ,  $\tau_2$ ) be  $\lambda_N$ -TSs. Then  $\lambda_N$ -Cl(h<sup>-1</sup>(E))  $\subseteq$  h<sup>-1</sup>( $\lambda_N$ -Cl(E)) for every  $\lambda_N$ -OS E of  $\Omega_2$ .

#### Proof

Let E be any  $\lambda_N$ -OS of  $\Omega_2$ . Since h is  $\lambda_N$ - $\alpha$ -irresolute and by Lemma 3.7,  $\lambda_N$ - $\alpha$ Cl(h<sup>-1</sup>(E)) =  $\lambda_N$ -Cl(h<sup>-1</sup>(E)). By Theorem 3.4,  $\lambda_N$ - $\alpha$ Cl(h<sup>-1</sup>(E))  $\subseteq$  h<sup>-1</sup>( $\lambda_N$ - $\alpha$ Cl(E)) and by Lemma 3.7, h<sup>-1</sup>( $\lambda_N$ - $\alpha$ Cl(E))  $\subseteq$  h<sup>-1</sup>( $\lambda_N$ -Cl(E)). Then  $\lambda_N$ - $\alpha$ Cl(h<sup>-1</sup>(E))  $\subseteq$  h<sup>-1</sup>( $\lambda_N$ -Cl(E)). Therefore  $\lambda_N$ -Cl(h<sup>-1</sup>(E))  $\subseteq$  h<sup>-1</sup>( $\lambda_N$ -Cl(E)).

## 3.9. Theorem

Let  $(\Omega_1, \tau_1)$  and  $(\Omega_2, \tau_2)$  be  $\lambda_N$ -TSs and h:  $\Omega_1 \rightarrow \Omega_2$  is  $\lambda_N$ -semi-irresolute iff h<sup>-1</sup>(E) is  $\lambda_N$ -SCS in  $\Omega_1$ ,  $\forall \lambda_N$ -SCS E of  $\Omega_2$ .

## Proof

If h is  $\lambda_N$ -semi-irresolute, then for every  $\lambda_N$ -SOS F of  $\Omega_2$ ,  $h^{-1}(F)$  is  $\lambda_N$ -SOS in  $\Omega_1$ . If E is any  $\lambda_N$ -SCS of  $\Omega_2$ , then  $\Omega_2 - E$  is  $\lambda_N$ -SOS. As a consequence,  $h^{-1}(\Omega_2 - E)$  is  $\lambda_N$ -SOS but  $h^{-1}(\Omega_2 - E) = \Omega_1 - h^{-1}(E)$  so that  $h^{-1}(E)$  is  $\lambda_N$ -SCS in  $\Omega_1$ .

Conversely, if, for all  $\lambda_N$ -SCS E of  $\Omega_2$ ,  $h^{-1}(E)$  is  $\lambda_N$ -SCS in  $\Omega_1$  and if F is any  $\lambda_N$ -SOS of  $\Omega_2$ , then  $\Omega_2$ -F is  $\lambda_N$ -SCS. Also  $h^{-1}(\Omega_2$ -F) =  $\Omega_1$ - $h^{-1}(F)$  is  $\lambda_N$ -SCS in  $\Omega_1$ . Accordingly  $h^{-1}(F)$  is  $\lambda_N$ -SOS in  $\Omega_1$ . As a result, h is  $\lambda_N$ -semi-irresolute.

## 3.10. Theorem

If h<sub>1</sub>:  $(\Omega_1, \tau_1) \rightarrow (\Omega_2, \tau_2)$  is  $\lambda_N$ -semi-irresolute and h<sub>2</sub>:  $(\Omega_2, \tau_2) \rightarrow (\Omega_3, \tau_3)$  is  $\lambda_N$ -semi-irresolute, then h<sub>2</sub>  $\circ$  h<sub>1</sub>:  $(\Omega_1, \tau_1) \rightarrow (\Omega_3, \tau_3)$  is  $\lambda_N$ -semi-irresolute.

#### Proof

If  $E \subseteq \Omega_3$  is  $\lambda_N$ -SOS, then  $h_{2^{-1}}(E)$  is  $\lambda_N$ -SOS in  $\Omega_2$  because  $h_2$  is  $\lambda_N$ -semi-irresolute. Consequently since  $h_1$  is  $\lambda_N$ -semi-irresolute,  $h_{1^{-1}}(h_{2^{-1}}(E)) = (h_2 \circ h_1)^{-1}(E)$  is  $\lambda_N$ -SOS in  $\Omega_1$ . Hence  $h_2 \circ h_1$  is  $\lambda_N$ -semi-irresolute.

# 3.11. Example (h<sub>2</sub> ° h<sub>1</sub> is λ<sub>N</sub>-semi-irresolute $\neq$ h<sub>1</sub> & h<sub>2</sub> is λ<sub>N</sub>-semi-irresolute)

Let h1:  $(\Omega_1, \tau_1) \rightarrow (\Omega_2, \tau_2)$  be defined by h1(p) = s, h1(q) = r and h2:  $(\Omega_2, \tau_2) \rightarrow (\Omega_3, \tau_3)$  be defined by h2(r) = u and h2(s) = v where  $\Omega_1 = \{p, q\}, \Omega_2 = \{r, s\}$  and  $\Omega_3 = \{u, v\}$ . Let  $\tau_1 = \{0_N, A, B\}$ ,

 $\tau_2 = \{0_N, C, D\}$  and  $\tau_3 = \{0_N, E, F\}$ . Now,  $\{0_N, A, B, G\}$ ,  $\{0_N, C, D, H\}$  and  $\{0_N, E, F, I\}$  are  $\lambda_N$ -SOS of  $(\Omega_1, \tau_1)$ ,  $(\Omega_2, \tau_2)$  and  $(\Omega_3, \tau_3)$  respectively, where

 $\begin{array}{ll} A = \left\langle \left(0.3, \, 0.7, \, 0.8\right), \left(0.2, \, 0.6, \, 0.8\right)\right\rangle, & B = \left\langle \left(0.4, \, 0.6, \, 0.7\right), \left(0.5, \, 0.5, \, 0.6\right)\right\rangle, \\ C = \left\langle \left(0.8, \, 0.4, \, 0.2\right), \left(0.8, \, 0.3, \, 0.3\right)\right\rangle, & D = \left\langle \left(0.6, \, 0.5, \, 0.5\right), \left(0.7, \, 0.4, \, 0.4\right)\right\rangle, \\ E = \left\langle \left(0.2, \, 0.6, \, 0.8\right), \left(0.3, \, 0.7, \, 0.8\right)\right\rangle, & F = \left\langle \left(0.5, \, 0.5, \, 0.6\right), \left(0.4, \, 0.6, \, 0.7\right)\right\rangle, \\ G = \left\langle \left(0.3, \, 0.7, \, 0.8\right), \left(0.4, \, 0.5, \, 0.7\right)\right\rangle, & H = \left\langle \left(0.7, \, 0.5, \, 0.4\right), \left(0.8, \, 0.3, \, 0.3\right)\right\rangle, \\ I = \left\langle \left(0.4, \, 0.5, \, 0.7\right), \left(0.3, \, 0.7, \, 0.8\right)\right\rangle. \end{array}$ 

Here,  $h_2 oh_1$ :  $\Omega_1 \rightarrow \Omega_3$  defined by  $h_2 \circ h_1(p) = v$  and  $h_2 \circ h_1(q) = u$  is  $\lambda_N$ -semi-irresolute, but  $h_1$  and  $h_2$  are not  $\lambda_N$ -semi-irresolute.

#### 3.12. Corollary

Let  $(\Omega_1, \tau_1)$ ,  $(\Omega_2, \tau_2)$  and  $(\Omega_3, \tau_3)$  be  $\lambda_N$ -TSs. If  $h_1: \Omega_1 \rightarrow \Omega_2$  and  $h_2: \Omega_2 \rightarrow \Omega_3$  are  $\lambda_N - \alpha$ -irresolute then  $h_2 \circ h_1: \Omega_1 \rightarrow \Omega_3$  is  $\lambda_N - \alpha$ -irresolute.

#### Proof

Let E is  $\lambda_N - \alpha OS$  in  $(\Omega_3, \tau_3)$ . Since  $h_2$  is  $\lambda_N - \alpha$ -irresolute,  $h_2^{-1}(E)$  is  $\lambda_N - \alpha OS$  in  $(\Omega_2, \tau_2)$ . Also since  $h_1$  is  $\lambda_N - \alpha$ -irresolute,  $h_1^{-1}(h_2^{-1}(E)) = (h_2 \circ h_1)^{-1}(E)$  is  $\lambda_N - \alpha OS$  in  $(\Omega_1, \tau_1)$ . Therefore  $h_2 \circ h_1$  is  $\lambda_N - \alpha$ -irresolute.

# 3.13. Corollary

If h1:  $(\Omega_1, \tau_1) \rightarrow (\Omega_2, \tau_2)$  is  $\lambda_N$ - $\alpha$ -irresolute (resp.  $\lambda_N$ -semi-irresolute,  $\lambda_N$ -pre-irresolute) and h2:  $(\Omega_2, \tau_2) \rightarrow (\Omega_3, \tau_3)$  is  $\lambda_N$ - $\alpha$ Cts (resp.  $\lambda_N$ -SCts,  $\lambda_N$ -PCts) then h2  $\circ$  h1:  $(\Omega_1, \tau_1) \rightarrow (\Omega_3, \tau_3)$  is  $\lambda_N$ - $\alpha$ Cts (resp.  $\lambda_N$ -SCts,  $\lambda_N$ -PCts).

## Proof

Let E is  $\lambda_N$ -OS in ( $\Omega_3$ ,  $\tau_3$ ). Since  $h_2$  is  $\lambda_N$ - $\alpha$ Cts (resp.  $\lambda_N$ -SCts,  $\lambda_N$ -PCts),  $h_2^{-1}(E)$  is  $\lambda_N$ - $\alpha$ OS (resp.  $\lambda_N$ -SOS,  $\lambda_N$ -POS) in ( $\Omega_2$ ,  $\tau_2$ ). Also since  $h_1$  is  $\lambda_N$ - $\alpha$ -irresolute (resp.  $\lambda_N$ -semi-irresolute,  $\lambda_N$ -pre-irresolute),  $h_1^{-1}(h_2^{-1}(E)) = (h_2 \circ h_1)^{-1}(E)$  is  $\lambda_N$ - $\alpha$ OS (resp.  $\lambda_N$ -SOS,  $\lambda_N$ -POS) in ( $\Omega_1$ ,  $\tau_1$ ). Therefore  $h_2 \circ h_1$  is  $\lambda_N$ - $\alpha$ Cts (resp.  $\lambda_N$ -SCts,  $\lambda_N$ -PCts).

## 3.14. Theorem

Let  $(\Omega_1, \tau_1)$  and  $(\Omega_2, \tau_2)$  be  $\lambda_N$ -TSs. If h:  $\Omega_1 \rightarrow \Omega_2$  is  $\lambda_N$ -semi-irresolute and  $\lambda_N$ -pre-irresolute then h is  $\lambda_N$ - $\alpha$ -irresolute.

#### Proof

Let E is  $\lambda_N$ - $\alpha$ OS in ( $\Omega_2$ ,  $\tau_2$ ), then by Theorem 3.3, E is  $\lambda_N$ -SOS and  $\lambda_N$ -POS. Since h is  $\lambda_N$ -semi-irresolute and  $\lambda_N$ -pre-irresolute, h<sup>-1</sup>(E) is  $\lambda_N$ -SOS and  $\lambda_N$ -POS. Therefore h<sup>-1</sup>(E) is  $\lambda_N$ - $\alpha$ OS. Hence h is  $\lambda_N$ - $\alpha$ -irresolute.

#### 3.15. Theorem

Let  $(\Omega_1, \tau_1)$  and  $(\Omega_2, \tau_2)$  be  $\lambda_N$ -TSs. A function h:  $\Omega_1 \rightarrow \Omega_2$  is  $\lambda_N$ - $\alpha$ Cts iff it is  $\lambda_N$ -SCts and  $\lambda_N$ -PCts.

#### Proof

It is clear from Theorem 3.3.

#### 4. Contra λ<sub>N</sub>-Irresolute Functions

## 4.1. Definition

Let  $(\Omega_1, \tau_1)$  and  $(\Omega_2, \tau_2)$  be  $\lambda_N$ -TSs. Then h:  $\Omega_1 \rightarrow \Omega_2$  is said to be contra  $\lambda_N$ - $\alpha$ -irresolute (resp. contra  $\lambda_N$ -semi-irresolute, contra  $\lambda_N$ -pre-irresolute) if the inverse image of every  $\lambda_N$ - $\alpha$ OS (resp.  $\lambda_N$ -SOS,  $\lambda_N$ -POS) in  $(\Omega_2, \tau_2)$  is a  $\lambda_N$ - $\alpha$ CS (resp.  $\lambda_N$ -SCS,  $\lambda_N$ -PCS) in  $(\Omega_1, \tau_1)$ .

#### 4.2. Example

(i) Let h:  $(\Omega_1, \tau_1) \rightarrow (\Omega_2, \tau_2)$  be defined as h(s) = u and h(t) = v, where  $\Omega_1 = \{s, t\}$  and  $\Omega_2 = \{u, v\}, \tau_1 = \{0_N, A, B\}, \tau_2 = \{0_N, C, D\}.$ 

- $A = \left< (0.2, 0.8, 0.9), (0.1, 0.7, 0.8) \right>, \qquad B = \left< (0.3, 0.5, 0.6), (0.4, 0.6, 0.7) \right>,$
- $C = \langle (0.8, 0.3, 0.1), (0.9, 0.2, 0.2) \rangle, \qquad D = \langle (0.7, 0.4, 0.4), (0.6, 0.5, 0.3) \rangle,$
- $G = \langle (0.3, 0.7, 0.8), (0.2, 0.6, 0.7) \rangle, \qquad H = \langle (0.7, 0.4, 0.2), (0.8, 0.3, 0.3) \rangle.$

Here, {A', B', G', 1<sub>N</sub>} are  $\lambda_N$ - $\alpha$ CS of ( $\Omega_1$ ,  $\tau_1$ ) and {0<sub>N</sub>, C, D, H} are  $\lambda_N$ - $\alpha$ OS of ( $\Omega_2$ ,  $\tau_2$ ). Consequently, h is contra  $\lambda_N$ - $\alpha$ -irresolute function.

(ii) Let h:  $(\Omega_1, \tau_1) \rightarrow (\Omega_2, \tau_2)$  be defined as h(p) = v, h(q) = w and h(r) = u, where  $\Omega_1 = \{p, q, r\}$  and  $\Omega_2 = \{u, v, w\}, \tau_1 = \{0_N, A, B\}, \tau_2 = \{0_N, C, D\}.$ 

$$\begin{split} A &= \left\langle \left(0.2, \, 0.6, \, 0.8\right), \left(0.1, \, 0.7, \, 0.9\right), \left(0.2, \, 0.8, \, 0.9\right) \right\rangle, \\ C &= \left\langle \left(0.3, \, 0.4, \, 0.7\right), \left(0.2, \, 0.5, \, 0.8\right), \left(0.4, \, 0.6, \, 0.7\right) \right\rangle, \\ G &= \left\langle \left(0.3, \, 0.3, \, 0.1\right), \left(0.9, \, 0.2, \, 0.2\right), \left(0.8, \, 0.4, \, 0.2\right) \right\rangle, \\ H &= \left\langle \left(0.8, \, 0.5, \, 0.2\right), \left(0.7, \, 0.4, \, 0.4\right), \left(0.7, \, 0.6, \, 0.3\right) \right\rangle, \\ H &= \left\langle \left(0.9, \, 0.4, \, 0.2\right), \left(0.8, \, 0.3, \, 0.3\right), \left(0.7, \, 0.5, \, 0.3\right) \right\rangle. \end{split}$$

Here, {A', B', G', 1<sub>N</sub>} are  $\lambda_N$ -SCS of ( $\Omega_1$ ,  $\tau_1$ ) and {0<sub>N</sub>, C, D, H} are  $\lambda_N$ -SOS of ( $\Omega_2$ ,  $\tau_2$ ). Hence h is contra  $\lambda_N$ -semi-irresolute function.

(iii) Let  $h : (\Omega_1, \tau_1) \rightarrow (\Omega_2, \tau_2)$  be defined as h(p) = w, h(q) = u and h(r) = v, where  $\Omega_1 = \{p, q, r\}$  and  $\Omega_2 = \{u, v, w\}$ ,  $\tau_1 = \{0_N, A, B\}$ ,  $\tau_2 = \{0_N, C, D\}$ .

 $\begin{array}{ll} A = \left< (0.2, 0.7, 0.7), (0.3, 0.7, 0.8), (0.1, 0.8, 0.8) \right>, \\ C = \left< (0.9, 0.1, 0.1), (0.8, 0.2, 0.2), (0.8, 0.3, 0.2) \right>, \\ G = \left< (0.2, 0.8, 0.8), (0.2, 0.7, 0.8), (0.1, 0.9, 0.9) \right>, \\ \end{array} \right. \\ \begin{array}{ll} B = \left< (0.3, 0.7, 0.6), (0.4, 0.6, 0.7), (0.2, 0.7, 0.8) \right>, \\ D = \left< (0.8, 0.3, 0.2), (0.6, 0.3, 0.3), (0.7, 0.4, 0.4) \right>, \\ H = \left< (0.8, 0.2, 0.1), (0.7, 0.3, 0.2), (0.8, 0.3, 0.3) \right>. \\ \end{array}$ 

Here, {A', B', G', 1<sub>N</sub>} are  $\lambda_N$ -PCS of ( $\Omega_1$ ,  $\tau_1$ ) and {0<sub>N</sub>, C, D, H} are  $\lambda_N$ -POS of ( $\Omega_2$ ,  $\tau_2$ ). That's why h is contra  $\lambda_N$ -pre-irresolute function.

#### 4.3. Theorem

Let  $(\Omega_1, \tau_1)$  and  $(\Omega_2, \tau_2)$  be  $\lambda_N$ -TSs. Then h:  $\Omega_1 \rightarrow \Omega_2$  is contra  $\lambda_N$ - $\alpha$ -irresolute iff for every  $\lambda_N$ - $\alpha$ CS E of  $\Omega_2$ , h<sup>-1</sup>(E) is  $\lambda_N$ - $\alpha$ OS in  $\Omega_1$ .

### Proof

If h is contra  $\lambda_{N-\alpha}$ -irresolute, then for each  $\lambda_{N-\alpha}OS F$  of  $\Omega_2$ ,  $h^{-1}(F)$  is  $\lambda_{N-\alpha}CS$  in  $\Omega_1$ . If E is any  $\lambda_{N-\alpha}CS$  of  $\Omega_2$ , then  $\Omega_2 - E$  is  $\lambda_{N-\alpha}OS$ . Thus  $h^{-1}(\Omega_2 - E)$  is  $\lambda_{N-\alpha}CS$  but  $h^{-1}(\Omega_2 - E) = \Omega_1 - h^{-1}(E)$  so that  $h^{-1}(E)$  is  $\lambda_{N-\alpha}OS$  in  $\Omega_1$ .

Conversely, if, for all  $\lambda_N - \alpha CS \to f \Omega_2$ ,  $h^{-1}(E)$  is  $\lambda_N - \alpha OS$  in  $\Omega_1$  and if F is any  $\lambda_N - \alpha OS$  of  $\Omega_2$ , then  $\Omega_2 - F$  is  $\lambda_N - \alpha CS$ . Also,  $h^{-1}(\Omega_2 - F) = \Omega_1 - h^{-1}(F)$  is  $\lambda_N - \alpha OS$ . Thus  $h^{-1}(F)$  is  $\lambda_N - \alpha CS$  in  $\Omega_1$ . Hence h is contra  $\lambda_N - \alpha$ -irresolute.

#### 4.4. Corollary

Let  $(\Omega_1, \tau_1)$  and  $(\Omega_2, \tau_2)$  be  $\lambda_N$ -TSs. Then h:  $\Omega_1 \rightarrow \Omega_2$  is contra  $\lambda_N$ -semi-irresolute (contra  $\lambda_N$ -pre-irresolute) iff for every  $\lambda_N$ -SCS ( $\lambda_N$ -PCS) E of  $\Omega_2$ , h<sup>-1</sup>(E) is  $\lambda_N$ -SOS ( $\lambda_N$ -POS) in  $\Omega_1$ .

## Proof

If h is contra  $\lambda_N$ -semi-irresolute (contra  $\lambda_N$ -pre-irresolute), then for each  $\lambda_N$ -SOS ( $\lambda_N$ -POS) F of  $\Omega_2$ , h<sup>-1</sup>(F) is  $\lambda_N$ -SCS ( $\lambda_N$ -PCS) in  $\Omega_1$ . If E is any  $\lambda_N$ -SCS ( $\lambda_N$ -PCS) of  $\Omega_2$ , then  $\Omega_2 - E$  is  $\lambda_N$ -SOS ( $\lambda_N$ -POS). Thus h<sup>-1</sup>( $\Omega_2 - E$ ) is  $\lambda_N$ -SCS ( $\lambda_N$ -PCS) but h<sup>-1</sup>( $\Omega_2 - E$ ) =  $\Omega_1 - h^{-1}(E)$  so that h<sup>-1</sup>(E) is  $\lambda_N$ -SOS ( $\lambda_N$ -POS) in  $\Omega_1$ .

Conversely, if, for all  $\lambda_N$ -SCS ( $\lambda_N$ -PCS) E of  $\Omega_2$ ,  $h^{-1}(E)$  is  $\lambda_N$ -SOS ( $\lambda_N$ -POS) in  $\Omega_1$  and if F is any  $\lambda_N$ -SOS ( $\lambda_N$ -POS) of  $\Omega_2$ , then  $\Omega_2 - F$  is  $\lambda_N$ -SCS ( $\lambda_N$ -PCS). Also,  $h^{-1}(\Omega_2 - F) = \Omega_1 - h^{-1}(F)$  is  $\lambda_N$ -SOS ( $\lambda_N$ -POS). Thus  $h^{-1}(F)$  is  $\lambda_N$ -SCS ( $\lambda_N$ -PCS) in  $\Omega_1$ . Hence h is contra  $\lambda_N$ -semi-irresolute (contra  $\lambda_N$ -pre-irresolute).

#### 4.5. Theorem

Let  $(\Omega_1, \tau_1)$ ,  $(\Omega_2, \tau_2)$  and  $(\Omega_3, \tau_3)$  be  $\lambda_N$ -TSs. If  $h_1: \Omega_1 \rightarrow \Omega_2$  and  $h_2: \Omega_2 \rightarrow \Omega_3$  are contra  $\lambda_N$ -semi-irresolute functions, then  $h_2 \circ h_1: \Omega_1 \rightarrow \Omega_3$  is  $\lambda_N$ -semi-irresolute.

#### Proof

If  $E \subseteq Z$  is  $\lambda_N$ -SOS, then  $h_{2^{-1}}(E)$  is  $\lambda_N$ -SCS in  $\Omega_2$  because  $h_2$  is contra  $\lambda_N$ -semi-irresolute. Consequently, since  $h_1$  is contra  $\lambda_N$ -semi-irresolute,  $h_{1^{-1}}(h_{2^{-1}}(E)) = (h_2 \circ h_1)^{-1}(E)$  is  $\lambda_N$ -SOS in  $\Omega_1$ . Hence  $h_2oh_1$  is  $\lambda_N$ -semi-irresolute.

# 4.6. Example ( $h_2 \circ h_1$ is $\lambda_N$ -semi-irresolute $\neq h_1$ & $h_2$ is contra $\lambda_N$ -semi-irresolute)

Let  $h_1: (\Omega_1, \tau_1) \rightarrow (\Omega_2, \tau_2)$  be defined by  $h_1(l) = q$ ,  $h_1(m) = r$ ,  $h_1(n) = p$  and  $h_2: (\Omega_2, \tau_2) \rightarrow (\Omega_3, \tau_3)$ be defined by  $h_2(p) = v$ ,  $h_2(q) = w$  and  $h_2(r) = u$  where  $\Omega_1 = \{l, m, n\}$ ,  $\Omega_2 = \{p, q, r\}$  and  $\Omega_3 = \{u, v, w\}$ . Let  $\tau_1 = \{0_N, A, B\}$ ,  $\tau_2 = \{0_N, C, D\}$  and  $\tau_3 = \{0_N, E, F\}$ . Here,  $\{0_N, A, B, G\}$ ,  $\{0_N, C, D, H\}$  and  $\{0_N, E, F, I\}$ are  $\lambda_N$ -SOS of  $(\Omega_1, \tau_1)$ ,  $(\Omega_2, \tau_2)$  and  $(\Omega_3, \tau_3)$  where

 $A = \left< (0.2, 0.6, 0.8), (0.1, 0.7, 0.9), (0.2, 0.8, 0.9) \right>, \qquad B = \left< (0.3, 0.4, 0.7), (0.2, 0.5, 0.8), (0.4, 0.6, 0.7) \right>, \\ (0.4, 0.7) )$ 

 $\mathsf{C} = \left< \left( 0.2, \, 0.8, \, 0.9 \right), \left( 0.2, \, 0.6, \, 0.8 \right), \left( 0.1, \, 0.7, \, 0.9 \right) \right>, \qquad \mathsf{D} = \left< \left( 0.4, \, 0.6, \, 0.7 \right), \left( 0.3, \, 0.4, \, 0.7 \right), \left( 0.2, \, 0.5, \, 0.8 \right) \right>,$ 

 $\mathsf{E} = \left< \left( 0.1, \, 0.7, \, 0.9 \right), \left( 0.2, \, 0.8, \, 0.9 \right), \left( 0.2, \, 0.6, \, 0.8 \right) \right>, \qquad \mathsf{F} = \left< \left( 0.2, \, 0.5, \, 0.8 \right), \left( 0.4, \, 0.6, \, 0.7 \right), \left( 0.3, \, 0.4, \, 0.7 \right) \right>,$ 

$$\mathsf{G} = \left< (0.3, 0.5, 0.7), (0.2, 0.6, 0.9), (0.3, 0.7, 0.8) \right>, \qquad \mathsf{H} = \left< (0.3, 0.7, 0.8), (0.3, 0.5, 0.7), (0.2, 0.6, 0.9) \right>,$$

 $I = \langle (0.2, 0.6, 0.9), (0.3, 0.7, 0.8), (0.3, 0.5, 0.7) \rangle.$ 

Here,  $h_2 \circ h_1$ :  $\Omega_1 \rightarrow \Omega_3$  which is defined by  $h_2 \circ h_1(l) = w$ ,  $h_2 \circ h_1(m) = u$  and  $h_2 \circ h_1(n) = v$  is  $\lambda_N$ -semi-irresolute, but  $h_1$  and  $h_2$  are not contra  $\lambda_N$ -semi-irresolute.

#### 4.7. Corollary

Let  $(\Omega_1, \tau_1)$ ,  $(\Omega_2, \tau_2)$  and  $(\Omega_3, \tau_3)$  be  $\lambda_N$ -TSs. If  $h_1: \Omega_1 \rightarrow \Omega_2$  and  $h_2: \Omega_2 \rightarrow \Omega_3$  are contra  $\lambda_N$ - $\alpha$ -irresolute (contra  $\lambda_N$ -pre-irresolute) functions, then  $h_2 \circ h_1: \Omega_1 \rightarrow \Omega_3$  is a  $\lambda_N$ - $\alpha$ -irresolute ( $\lambda_N$ -pre-irresolute) function.

#### 4.8. Theorem

Let  $(\Omega_1, \tau_1)$  and  $(\Omega_2, \tau_2)$  be  $\lambda_N$ -TSs. If h:  $\Omega_1 \rightarrow \Omega_2$  is contra  $\lambda_N$ - $\alpha$ -irresolute, then it is contra  $\lambda_N$ - $\alpha$ Cts.

#### Proof

Let E be any  $\lambda N$ -OS in  $\Omega_2$ . Then E is  $\lambda N$ - $\alpha$ OS in  $\Omega_2$ . Since h is contra  $\lambda N$ - $\alpha$ -irresolute, h<sup>-1</sup>(E) is a  $\lambda N$ - $\alpha$ CS in  $\Omega_1$ . It shows that h is contra  $\lambda N$ - $\alpha$ Cts function.

## 4.9. Theorem

Let  $(\Omega_1, \tau_1)$ ,  $(\Omega_2, \tau_2)$  and  $(\Omega_3, \tau_3)$  be  $\lambda_N$ -TSs. If h<sub>1</sub>:  $\Omega_1 \rightarrow \Omega_2$  is contra  $\lambda_N$ - $\alpha$ -irresolute and h<sub>2</sub>:  $\Omega_2 \rightarrow \Omega_3$  is contra  $\lambda_N$ - $\alpha$ Cts, then h<sub>2</sub>  $\circ$  h<sub>1</sub>:  $\Omega_1 \rightarrow \Omega_3$  is  $\lambda_N$ - $\alpha$ Cts.

#### Proof

Let  $E \subseteq \Omega_3$  is  $\lambda N$ -OS. Since  $h_2$  is contra  $\lambda N$ - $\alpha Cts$ ,  $h_2^{-1}(E)$  is  $\lambda N$ - $\alpha CS$  in  $\Omega_2$ . Consequently, since  $h_1$  is contra  $\lambda N$ - $\alpha$ -irresolute,  $h_1^{-1}(h_2^{-1}(E)) = (h_2 \circ h_1)^{-1}(E)$  is  $\lambda N$ - $\alpha OS$  in  $\Omega_1$ , by Theorem 4.3. Hence  $h_2 \circ h_1$  is  $\lambda N$ - $\alpha Cts$ .

# 4.10. Corollary

Let  $(\Omega_1, \tau_1)$ ,  $(\Omega_2, \tau_2)$  and  $(\Omega_3, \tau_3)$  be  $\lambda_N$ -TSs, and  $h_1: \Omega_1 \rightarrow \Omega_2$  and  $h_2: \Omega_2 \rightarrow \Omega_3$  be two functions. Then if  $h_1$  is contra  $\lambda_N$ -semi-irresolute (contra  $\lambda_N$ -pre-irresolute) and  $h_2$  is contra  $\lambda_N$ -SCts (contra  $\lambda_N$ -PCts), then  $h_2 \circ h_1: \Omega_1 \rightarrow \Omega_3$  is  $\lambda_N$ -SCts ( $\lambda_N$ -PCts).

#### 4.11. Theorem

Let  $(\Omega_1, \tau_1)$  and  $(\Omega_2, \tau_2)$  be  $\lambda_N$ -TSs. If h:  $\Omega_1 \rightarrow \Omega_2$  is contra  $\lambda_N$ -semi-irresolute and contra  $\lambda_N$ -pre-irresolute, then h is contra  $\lambda_N$ - $\alpha$ -irresolute.

## Proof

Let E is  $\lambda_N$ - $\alpha$ OS in ( $\Omega_2$ ,  $\tau_2$ ), then by Theorem 3.3, E is  $\lambda_N$ -SOS and  $\lambda_N$ -POS. Since h is contra  $\lambda_N$ -semi-irresolute and contra  $\lambda_N$ -pre-irresolute, h<sup>-1</sup>(E) is  $\lambda_N$ -SCS and  $\lambda_N$ -PCS. Therefore h<sup>-1</sup>(E) is  $\lambda_N$ - $\alpha$ CS. Hence h is contra  $\lambda_N$ - $\alpha$ -irresolute.

## 5. Conclusion

In this confab, we instigated  $\lambda_N$ - $\alpha$ -irresolute function,  $\lambda_N$ -semi-irresolute function and  $\lambda_N$ -pre-irresolute function on  $\lambda_N$ -TS. Subsequently, we have analyzed its various properties. Followed by this, the new postulations of contra  $\lambda_N$ - $\alpha$ -irresolute function, contra  $\lambda_N$ -semi-irresolute function and contra  $\lambda_N$ -pre-irresolute function were put forth on  $\lambda_N$ -TS and their features were probed along with illustrations.

 $\lambda_{N}$ -TS idea can be further developed and extended in the actual life applications such as medical field, robotics, machine learning, neural networks, natural image sensing, speech recognition, and so on.

In future, it provokes to apply these perceptions in further extensions of  $\lambda_N$ -TS such as almost continuity and its unique characteristics in G<sub>N</sub>-TSs along with some separation axioms related to G<sub>N</sub>-TSs. Also, this concept may be extended to Intuitionistic Fuzzy and Neutrosophic Fixed Point Theory.
