October 1972

No. 4

EDITOR'S NOTE

On April 29, 1972, a select group of citizens of Mexico and the United States met at the University of New Mexico School of Law to discuss common environmental problems. The major topic of discussion was the Colorado River. This issue of the Natural Resources Journal contains the proceedings of that meeting which was entitled Pollution and Political Boundaries: U.S.-Mexican Environmental Problems.

Each presentation is placed in the order in which the author spoke to the conference. Some have been slightly modified to conform with recent developments engendered by the July 1972 agreement between the United States and Mexico on the Colorado; however, they remain essentially as presented to the conference.

It is the hope of the editorial staff that these proceedings will serve to shed some light on the problem confronting the United States and Mexico in regard to the Colorado, and will lead to a better understanding of the recent agreement reached between the two countries.

Our sincere thanks to the participants for their time, labor and most of all for their example of international understanding and cooperation through courteous and enlightened discussion.
