Weekly, one year..... 8.00

The New Mexican is the oldest newspaper in New Mexico. It is sent to every Postoffice in the Territory and has a large and growing circulation among the intelligent and progressive people of the southwest.

ADVERTISING RATES.

Wanted—One cent a word each insertion. Local—Ten cents per line each insertion. Reading Local—Preferred position—Twenty-five cents per line each insertion. Displayed—Two dollars an inch, single column, per month in Daily. One dollar an inch, single column, in either English or Spanish Weekly. Additional prices and particulars given on receipt of a copy of matter to be inserted.

TUESDAY, NOVEMBER 28.

No Paper on Thanksgiving.

The New Mexican believes in the propriety of observing Thanksgiving day. The president of the United States and the governor of New Mexico have asked that labor be suspended and the day be devoted to a realization and celebration of the blessings bestowed upon the American people and their country. Therefore, the New Mexican will issue no paper Thursday, that its employees may observe the day properly.

The furnaces and mills have orders on hand to keep them busy making steel rails all of next year. Many manufacturers are sure of business for next year because they have booked orders. Prosperity has come to stay awhile.

While busybodies are trying to make it appear that President McKinley is seeking to keep Admiral Dewey from being popular, that gentleman knows there is no cause for the story, so takes pains to announce through the press that the president is his good friend, and should be re-elected president.

The British government is buying 10,000 Missouri mules to take to Africa. This ought to reduce the Democratic majority in that state, where, according to appearances, when the ballots are counted, a man has a vote for every mule he owns, if indeed the mules do not vote.

Senator Morgan, of Alabama, the best and broadest senator of the south, who has earned his election many times over by services for his state and nation, is now at an advanced age, compelled to canvass the state with a rival to secure the support of his party for re-election. Senator Morgan is one of the senators whom the country needs.

In answer to the demand by the United States government for guarantees from the European powers now concerned in the partition of Chinese territory, that they respect existing trade treaties between China and the United States, there have been replies raising the question of the purpose of United States interference. To these it is stated that the administration has replied with pointed emphasis. The government has no notion of participating in the distribution of Chinese territory, but it will insist that the treaties with that empire be respected.

After many months of secret investigation detectives have found out that the Maine was blown up with 700 pounds of gun cotton anchored near the ship, so that the keel swinging against the torpedo would explode it. The people knew long ago that some such infernal plot, caused the result, but the details were of little importance unless accompanied by a discovery of the identity of the parties who committed the crime. And since the act has been avenged, and Spain held responsible, even the discovery of the particular officials who acted for Spain is not of much moment.

New Mexico is receiving as much benefit as any section of the country from the improved methods of mining and treating ore. The magnitude of some of the mining operations now being undertaken in the development and operation of propostions which a few years since would have been considered whimsical is an indication of the rapid and successful development of new conditions in the industry of mining. This change has largely been brought about by the application of the latest and best scientific knowledge. Electricity and the cyanide process are to a great extent responsible for many changes for the better in mining, and there is a tendency toward the adoption of further and still more radical changes than those which have marked the development of the past decade in several branches of the industry.

Russia has assured the United States that this country shall have trade privileges at the ports Russia secured on the Pacific by sweeping across the continent of Asia because England would not permit her to reach the Mediterranean. China granted privileges to the United States at ports open to other nations, and by treaty guaranteed that the same privileges would be extended at all ports opened in the future. When Russia secured her present ports China would not have been able to insist upon this promise being respected by Russia, but the latter has informed the United States that she will be welcome to trade through the Russian ports. This opportunity will permit the manufacturers to secure business in northern China and along the Transiberian railway. Russia has always been very friendly to this country, and has done the handsomest thing in this instance. Though it is said she is reluctant to give a written guarantee, there is no reason to doubt her earnest intentions.

The Sunday Law.

This Sunday Law Mills will have a conference with the saloon-keepers at his office in Las Vegas for the purpose of securing more complete observance

of the Sunday law. The Optic says that if the court undertakes the strict enforcement of the law it is to be hoped the force of fining by the city will be done away with, so that some of the saloons will not be permitted to do business and pay a fine of \$5 for the offense. The judges of the courts have fully determined to strictly enforce this law, but as violations were so long winked at by the Democratic judges that the law was considered a dead letter, are giving all offenders due notice and advising them not to lay themselves liable. The Republican judges do not propose to follow precedents in this matter. They are determined that laws for good government and in the interest of morality will be enforced by the people who enacted them through their legislature, and who favor obedience being required. Those who fail to keep faith with the court and clandestinely break the law can expect no clemency from judge nor jury.

Do Not Need a Platform.

The Democrats are turning themselves considerably about what shall be contained in their national platform. In Maryland they won this year without anything that could really be called a platform. They drew up a document that was a substitute for a platform, which advocated nothing except what every Democrat could subscribe to, and did not denounce anything which any Democrat favored. Free silver and the state administration and policies were ignored, and the race became one not of policies, but of parties, a contest between Republicans and Democrats, and of course the Democratic side lined up straight. The Democratic party will next year not be able to declare itself upon any issue which will not drive some of its voters from support of the ticket. Expansion and free silver are topics upon which the hosts do not agree. As there is one thing the party cannot escape, the candidacy of Colonel Bryan, the Democracy might as well not make a platform and simply go before the country upon the question whether the Nebraska shall be president, letting him be the candidate and the platform. Fully as many votes would be received by him under such an arrangement as if the party prepares a hodge-podge platform like that of the last convention, which drove away more voters than it attracted.

A Far Reaching Proposition.

The proposition of the government's attorney, sent from Washington to Las Cruces, to add in perpetuating an injunction against the Elephant Butte irrigation proposition, had the merit of novelty at any rate. It was rejected by the irrigation company, which secured an approval by the interior department of a reservoir site on the Rio Grande before commencing work. The attorney, presumably at the suggestion of the department of justice, made an offer to permit the Elephant Butte dam to be constructed, provided its promoters would admit the navigability of the river, in the meantime permit a continuance of a hearing in court, and consent for the government to superintend the work and divide the water so as to permit the El Paso country to have an amount, which the government was to determine. This proposition was to be subject to approval by the department, which would in the end have to arrange for an official division of the water that at intervals flows in the Rio Grande.

As the contention of the United States supreme court is that if navigation hundreds of miles below Elephant Butte would be diminished by the proposed reservoir none should be created, then it is difficult to see what warrant the department could have for arranging for two reservoirs instead of one and ignoring the matter of navigation, unless it is proposed to require all reservoirs to allow a considerable portion of the flood waters to go unimpeded. It is doubtful whether any of the flood waters now reach the lower river, for they would have to pass through 500 miles of sandy bed that is usually dry before flood waters come. It is therefore not easy to see how the reservoirs are to be operated if they are to permit enough of the water to escape to allow navigation. And if the question of navigation should be waived, the government would, if logical in its determination to protect the rights of El Paso, have to recognize the claims of all below that city who want water to flow to their farms. And in the end, as it became clearer that there are impediments higher up the river, the government agent would have to come up to Socorro and limit the use of the stream, and then to Albuquerque, and finally to Colorado, and say that the farmers of the valleys in that state must tear out some of their dams, limit the intake of their ditches and leave enough to flow through the sandy wastes above and below El Paso. This would certainly involve serious complications and be a new though rather late departure.

According to the attorney for the government, that is just what is wanted by the department of justice, for he has said that "the government wants to get its grip on the river" and distribute the waters justly. If the scheme could be at an early day be worked out practically by the government building reservoirs, carrying the water through canals to keep it from wasting in the sandy bed and supplying every one who is entitled to it with plenty from a stream which is deficient in quantity, then the plan of the legal department of the government might be a good thing all around. But from present appearances the department was moved to its plan by a El Paso scheme, who desire to have a dam built, and must first secure water before going to congress to ask to have money appropriated for their project. It does not appear that the United States irrigation experts have been called into consultation in this matter; and, in fact, Elwood Mead, the chief of the government irrigation inquiry, will go before the court in opposition to the claim that the river should be unimpeded because it is supposed to be navigable somewhere, which is the only point concerning which inquiry by the lower court was ordered to be made, when the supreme court remanded the matter.

The government's attorney may succeed in getting a grip on the river, but if the solution of all the problems that will follow are to be left to him and the lawyers of the department of justice they will soon want some one to help them turn loose their grip.

Smallpox in the East.

Scarcely a day passes that eastern newspapers arriving at this office do not contain items concerning cases of smallpox in their vicinity. The Chicago Inter-Ocean of last Friday had a dispatch stating that a man suffering with smallpox walked into the office of the mayor at Owensboro, Ky., and asked to be taken to a hospital. At Uniontown, near by, said the telegram from Owensboro, there are over 200 cases, and nothing is being done to check the epidemic, and cases are reported from various points in the counties of Henderson and Union. In Oklahoma a few days ago thirty cases of smallpox were under quarantine, but as nobody died the authorities decided the disease was only "Cuban chicken pox." In Pennsylvania last year one town had 150 cases of smallpox, but the doctors and the newspapers diagnosed the epidemic as "skin disease." The New Mexican does not believe that smallpox can now be found in any of the large towns of this territory. In isolated places there may be here and there a case not reported, but the larger part of the population is immune, and from having had the disease or from vaccination, so that an epidemic is impossible. Yet danger to individuals liable to contract the disease requires vigilance upon the part of the health authorities. While a case of smallpox could now be found in almost every eastern city, the care exercised to prevent people being exposed gives the public confidence, while the idea that there are numerous cases in this territory and that no effort to prevent exposure makes many persons fear to come to New Mexico. There has in times been too much carelessness in this respect, but the health officers and the public generally are now more stringent in matters of this kind.

THE TERRITORIAL PRESS.

UNITY OF ACTION NEEDED.

(San Juan Times.)
Every effort should be made during the coming session of congress to secure statehood for New Mexico. All parties and all sections should unite on that proposition.

FUTURE OF MINING.

(Taos Crescent.)
The agricultural, horticultural and live stock industries of this territory are rapidly coming to the front, and the production in these lines will soon be immense, but the production of minerals and precious stones is certain to become the leading industry, and the total output in that business will in a few years exceed all others combined.

TERRITORIAL MACHINERY.

(Las Vegas Review.)
That Governor Otero is giving us a good administration is evidenced by the smooth and frictionless manner in which the territorial machinery is moving.

PRESS COMMENT.

AGUINALDO.

(New York Press.)
Aguinaldo pops his head above the horizon long enough to say that he abandoned Tarlac because it was unsanitary. It was, indeed, for Aguinaldo.

AS A MATTER OF COURSE.

(Boston Journal.)
A New York candidate for the supreme court has filed a statement showing campaign expenses of only 4 cents, for two postage stamps. It is perhaps needless to add that he was not elected.

HOORAY!

(North Dakota States.)
The Democratic party in one sense is like the church of the master. Its front portals should be thrown wide open to all seekers after the truth. Its rear doors, through which are kicked out the backsliders, should be few and narrow.

CORDIALLY INVITED.

(Philadelphia Record.)
After the German kaiser shall have paid his respects to Queen Victoria he should prolong his journey so as to see President McKinley and reach a good understanding with the whole English-speaking outfit. He would get a welcome in this Anglo-German-Irish republic which would make the blood jump in his royal arteries.

BEWARE OF THE MULES.

(Kansas City Star.)
The determination of the British government in the conflict in South Africa is shown by the arrival of two more British army officers in this country to buy army mules. Eight thousand Missouri mules have been already forwarded to the seat of war, and orders will be placed for 2,000 more. The advance of thousands of Missouri mules will be a formidable sight. The Boers would better get inside their laager.

A CASE IN POINT.

(Galveston News.)
The war between the Yaqui Indians and the Mexicans shows that the white race is not the only race which indulges in the bloody business of suppressing disorders. The Yaquis say that the Mexicans are trying to take their country, and the Mexicans say they already have it, and are only exercising their right to maintain order in it. After all, there is not much difference in men.

BRYAN IN NEW ENGLAND.

(New York Times.)
Animated nature affords numerous examples of audacious courage. The peccary, a funny little pig of a beast, will fearlessly charge a rushing locomotive. Cats are said to look upon kings, and female poets annually send great quantities of verse to the editors of magazines. W. J. Bryan's announcement that he is about to undertake a winter campaign in the New England states, organizing Democratic clubs and stirring up "the latent spirit of the Democrats in that region," promises a new and interesting example of daring.

BEYOND A DOUBT.

(St. Louis Globe-Democrat.)
If the Democratic convention next year is involved into endorsing the program of flag-furling, the Republican party will not only carry every state of the north and west, but it will win some states in the south which have been Democratic for generations.

Copper Colored Splotches.

There is only one cure for Contagious Blood Poison—the disease which has completely baffled the doctors. They are totally unable to cure it, and direct their efforts toward bottling the poison up in the blood and concealing it from view. S. S. S. cures the disease positively and permanently by forcing out every trace of the taint.

I was afflicted with a terrible blood disease, which was in spots at first, but afterwards spread all over my body. These soon broke out into sores, and it is easy to imagine the suffering I endured. Before I became convinced that the doctors could do no good, I had spent a hundred dollars, which was really thrown away. I then tried various patent medicines, but they did not reach the disease. When I had finished my first bottle of S. S. S., I was greatly improved and was delighted with the result. The large dark spots on my chest began to grow paler and smaller, and before long disappeared entirely. I regained my lost weight, became strong and my appetite greatly improved. I was soon entirely well, and my skin as clear as a piece of glass.

Don't destroy all possible chance of a cure by taking the doctor's treatment of mercury and potash. These minerals cause the hair to fall out, and will wreck the entire system.

S.S.S. For the Blood

is PURELY VEGETABLE, and is the only blood remedy guaranteed to contain no potash, mercury, or other mineral. Books on the disease and its treatment mailed free by Swift Specific Company, Atlanta, Georgia.

CAPTURE THE REBEL FIRST.

(Boston Journal.)
A significant new departure is taken by the Methodist missionary committee in appropriating money for church work in the Philippines. Among the 8,000,000 people there many are already Christians in fact, but many are Christians only in name, or not at all. The fervent and aggressive Methodist denomination is peculiarly well adapted to evangelical effort in our new dependencies. But not much can be accomplished in the Philippines until peace has been restored. The first essential to missionary progress is the capture of Aguinaldo and the collapse of his revolt.

MR. DANIEL'S OPINION.

(Richmond Times.)
Senator Daniel is a party man, and he would not knowingly say or do anything to hurt the party of which he has so long been an honored member and which has showered its honors upon him. But Senator Daniel believes that the true friend to the Democratic party is he who tells it the truth, who points out its errors, who warns against mistakes that must result in failure, who points out the way in which success seems to lie. He says plainly that he sees no encouragement to Democrats in the recent elections. He says, moreover, that, in his opinion, it is premature to shape issues before the conditions of 1900 shall have been developed, as they may be very different from those existing now.

LADIES DO YOU KNOW DR. FELIX LE BRUN'S Steel & Pennyroyal Treatment is the original and only FRENCH, safe and reliable cure on the market. It is sold by mail. Genuine sold only by Ireland's pharmacy, sole agent, Santa Fe, N. M.

The Secret of the Strait.

Another expedition is going in quest of the secret of the strait. For 400 years the secret has remained unsolved. Nowadays, geologists and geographers do not think water connections exist between the Atlantic and Pacific. The time was when the two continents were apart, these scientific people believe. There are people who find the secret of health as hard to find. Three words tell the way—a healthy stomach. The secret is Hostetter's Stomach Bitters. It cures constipation, indigestion, dyspepsia and all liver and kidney ailments. It cures them permanently. And it brings relief at once. All druggists keep it, and a private Revenue Stamp covers the neck of the bottle.

The Importance of Corn.

Yes, said Colonel Stillwell, everything is progressing nicely with the people in my part of the country. I am happy to say.

It is a fine region, said the young girl. It is. One of the most salubrious on earth. It is there that the great golden orb as it swings on its diurnal path across the sky pauses to send his tenderest messages across the sunbeams which blind him to the earth.

You don't say so exclaimed the young girl. It's something like wireless telegraphy, isn't it?

The Colonel looked a little annoyed, and she hastily exclaimed: It must be perfectly lovely there!

It is. The only gold we ask for is that which is coined from the sunlight into great ears of yellow corn. That's what my neighbors and I used to pride ourselves on.

Corn is a very useful article, she said with a dainty chirp.

Of course it is. People could not get along without it. I remember one year—one of the most terrible I ever experienced. My sympathies were never before so deeply moved. There was a drought. The corn crop was a failure.

It must have been dreadful. Still you could send elsewhere.

I could. So could the other comparatively well to do people. But I was thinking of the poor. I tell you, if it hadn't been for the charity of a number of charitable citizens myself among them, I have no doubt that a great many of those unfortunate beings would have died of thirst.—Washington Star.

A NARROW ESCAPE.

Thankful words written by Mrs. Ada E. Hart, of Graton, D. C. "Was taken with a bad cold which settled on my lungs; cough set in and finally terminated in Consumption. Four doctors gave me up, saying I could live but a short time. I gave myself up to my Savior, determined if I could not stay with my friends on earth, I would meet my absent ones above. My husband was advised to get Dr. King's New Discovery for Consumption, Coughs and Colds. I gave it a trial, took in all eight bottles. It has cured me, and thank God, I am saved and now a well and healthy woman." Fischer & Co.'s drug store. Regular size, 50c and \$1.00. Guaranteed or price refunded.

Safe and Sure.

Edith—What a good way to keep an objectionable suitor from proposing. Ethel—Just hint that you would accept him if he did.—Judge.

He Didn't Dawdle.

He—Do you dawdle? She—who has been informed that he is a bore?—No. He—Neither do I. Let's spend the evening just talking to each other.—Harlem Life.

HIS LIFE WAS SAVED.

Mr. J. E. Lilly, a prominent citizen of Hannibal, Mo., lately had a wonderful deliverance from a frightful death. In telling of it he says: "I was taken with Typhoid Fever, than ran into Pneumonia. My lungs became hardened. I was so weak I couldn't even sit up in bed. Nothing helped me. I expected to soon die of Consumption, when I heard of Dr. King's New Discovery. One bottle gave great relief. I continued to use it, and now am well and strong. I can't say too much in its praise." This marvelous medicine is the surest and quickest cure in the world for all Throat and Lung Trouble. Regular sizes 50c and \$1.00. Fischer & Co.'s drug store; every bottle guaranteed.

Bound to Depart.

A youthful Stockton man, rushed to catch a river boat for San Francisco, but was about two minutes late. The steamer was six feet out as he reached the dock. He swung his grip aboard, and jumping caught a rope and a post and held fast. Every one imagined he had fallen in. The captain peering over the side, saw his intrepid passenger. Here you, he shouted, by jumpy crickets, don't you ever do that again! The passenger had hauled himself aboard by this time, and turning a look of scorn at the captain, said: What do you think I'm going to do—jump back and try it over again?—San Francisco Wave.

SPAIN'S GREATEST NEED.

Mr. R. P. Oliva, of Barcelona, Spain, spends his winters at Aiken, S. C. Weak nerves had caused severe pains in the back of his head. On using Electric Bitters, America's greatest Blood and Nerve Remedy, all pain soon left him. He says this grand medicine is what his country needs. All America knows that it cures liver and kidney trouble, purifies the blood, tones up the stomach, strengthens the nerves, puts vim, vigor and new life into every muscle, nerve and organ of the body. If weak, tired or ailing, you need it. Every bottle guaranteed, only 50 cents. Sold by Fischer & Co., druggists.

So you, asked the Justice severely, are the two brothers named Powers, who threw those rocks?

The prisoners acquiesced. A striking instance, continued the Justice, with difficulty retaining a judicial demeanor, of the power behind the throne.—New York Press.

THAT THROBBING HEADACHE.

Would quickly leave you, if you used Dr. King's New Life Pills. Thousands of sufferers have proved their matchless merit for Sick and Nervous Headaches. They make pure blood and strong nerves and build up your health. Easy to take. Try them. Only 25 cents. Money back if not cured. Sold by Fischer & Co., druggists.

NERVITA RESTORES VITALITY, LOST VIGOR, AND MANHOOD.

Cure Impotent Night Emissions and wasting diseases, all forms of debility, or even complete impotence. A nerve tonic and blood-builder. Brings the pink glow back to the cheeks, restores the lost youth. By mail 50c per box 6 boxes for \$2.50; with a written guarantee to cure or refund the money. Write to N. M. M. Co., Chicago & Jackson Sts., Chicago. Ireland's Pharmacy sole agent, Santa Fe N. M.

SELECTIONS

PRESIDENTIAL SUCCESSION.

No Tribunal to Determine When "Inability" Begins or Ends.

A correspondent asks The Post to answer these questions:

First—On the death, disability or removal from office both of the president and vice president, who would act as president?

Second—Is the speaker of the house of representatives ever in line for the presidency, and if so when?

The secretary of state stands next to the vice president in the line of succession to the presidency.

The speaker of the house of representatives is not now in the line of succession. He was from 1792 to 1886. So many and such important events have happened in this great and busy country in the past four or five decades that not a few of them have left only a faint impression on the memory of the masses. Among the almost forgotten things, if we may judge by the frequency of inquiries relating to it, is the change of law, made about 13 years ago, in the matter of presidential succession. The constitution provides that: "In case of the removal of the president from office or of his death, resignation or inability to discharge the powers and duties of said office the same shall devolve on the vice president, and the congress may by law provide for the case of removal, death, resignation or inability both of the president and vice president, declaring what officer shall then act as president, and such officer shall act accordingly until the disability be removed or a president shall be elected."

In compliance with this provision congress in 1792 provided by law that the president pro tempore of the senate, and next to him, the speaker of the house of representatives, should succeed to the presidency in case of the removal, death, resignation, etc., of both president and vice president. This stood 94 years, or until 1886. Among those who, as president pro tempore of the senate, stood first in line of succession were Senator Thomas W. Ferry of Michigan and Senator David Davis of Illinois, the former occupying that position by reason of the death of Vice President Wilson; the latter because of the death of President Garfield.

In 1886, after the subject had been discussed at various times for many years, congress enacted a law substituting for the president pro tempore of the senate and the speaker of the house the members of the cabinet in the following order: The secretary of state, secretary of the treasury, secretary of war, attorney general, postmaster general, secretary of the navy and secretary of the interior. The head of the department of agriculture had not at that time been made a cabinet official.

It will be seen that, after long delay, congress at length discharged in a sensible and ample manner a part of the duty devolved on it by the constitutional provision quoted above. But another part of that duty remains untouched in spite of solemn warning.

There is no tribunal to determine when "inability" begins or ends. President Garfield lingered on the brink of the grave for more than two months. Of course any president is liable to "inability," but there is no way in which a sick president could be relieved of duty except by death. This is, in our opinion, quite as serious and important a subject as that which was legislated upon in 1886. Has it not been neglected long enough?—Washington Post.

Luminosity of Gas Mantles.

The delicate white mantles used in Welsbach lamps consist of a mixture of two rare earths—thoria and ceria. For some reason not yet clearly understood these substances must be combined in a definite proportion in order that they shall give the maximum of light. Pure thoria, or pure ceria, made into a mantle gives only about one-eleventh 90 per cent of thoria and 1 per cent of ceria. The remarkable thing is that so slight a quantity of ceria added to the thoria should so enormously increase the illumination, especially in view of the fact that a combination of equal quantities of thoria and ceria gives practically no light, becoming barely red hot in the gas flame.

An Ingenious Gas Burner.

A self-lighting gas burner is an ingenious adaptation of scientific principles. Two coils of metal of different coefficients are arranged round the burner, and to these is attached a pointer of platinum black, which absorbs oxygen. When the gas is turned on, it comes into contact with this pointer, which is just above the opening in the burner. A flame is created and the gas lighted; then the heat causes expansion of the coils, which draws down the pointer and so prevents it from interfering with the diffusion of light. As the coils cool after the gas has been turned off—the device assumes the first position again.

A Chinese Dream.

A missionary to China comments upon the heart-breaking experience he had at the Nanking arsenal, where he observed a modern, up to date equipment of English machinery employed in making obsolete war material. The Chinese military officials are just now taking pride in their most important production, a breech loading Mauser, which they state with great pride and acclaim, is capable of driving a bullet through four inches of wood. They imagine that this is the most powerful weapon of its kind in the world.

In Kentucky.

What is the difference between a major and a colonel?

It's all a question of capacity. To acquire the title of colonel a man must be able to stand about a quart more than a major.—Chicago Post.

The Reason Why.

Teacher—Now Patsey, wouldn't it be proper to say, 'You can't learn me nothing'?

Patsey—Yes'm.

Teacher—Why?

Patsey—Cause you can't.—Tit-Bits.

A PAIR OF ANTIQUE BOOTS.

Worn by Lord Fairfax When He Founded Winchester in Virginia.

Among the valuable antiquities left by ex-Governor Holliday there is a pair of ancient riding boots which were owned by Lord Fairfax and often worn by the man who founded the city. The boots are the oldest kind of footwear and are made of leather in an exceedingly queer fashion. They have passed through several generations of the Holliday family. Dr. Mackey, the late ex-governor's grandfather, was a warm friend of Lord Fairfax, and these gentlemen were together much of their time.

The boots that are now such a relic were worn by Lord Fairfax on special occasions, and they were considered the handsomest pair of boots of their day. Dr. Mackey always greatly admired them and upon one occasion asked Lord Fairfax to will them to him. Lord Fairfax did as he was requested, and upon his death Dr. Mackey became the possessor of them. They have been in the Holliday family until now. At the request of the late ex-governor they will be sent to the Virginia Historical society.

It is almost impossible to describe the oddity of their appearance. They are made of very heavy leather, are about 24 inches high and 12 inches long; the height of the heel is 3 inches; they are 5 inches long and 4 inches wide. The soles are sewed to the uppers, but the heels are attached by pegs nearly as large as a lead pencil.

In design they are what is known as the box toe boot. There is enough leather in them to make several ordinary pairs of riding boots. A flap of leather nearly eight inches wide turns over at the top of each. The leather seems quite well preserved.—Winchester (Va.) News Item.

Bathing the Babies.

Don't bathe your little ones too much in cold weather. They should be kept cleanly. But their lives may be washed away by the overzealous mother. Science has affirmed what intuition long ago discerned, that the body exhales a certain impalpable atmosphere which for the lack of a better term may be designated as magnetism. To continually wash that away is to deplete the vitality. Neither should the underclothing be too frequently changed. Understand, zealous housewife, this is no plea for filthiness. But your experienced physician will assure you that many a washed out, feeble, anaemic little one is injured by too much bathing. A sensitive, delicate little neighbor of mine used to cry and resist his mother at his daily bath and change. Finally a shrewd old country woman said to her:

"You wash away the life of Victor. Give him some sand to play with. Don't put him in a tub, but give him a quick, tepid sponge bath three times a week, and you'll see how he picks up."

The result justified the warning. To which it should be added that the temperature and bloodmaking power of child or adult should always be studied. No thin blooded, cold person can stand the amount of bathing which is demanded by one having strong vitality and the power of rapidly making rich red blood.

East and West.

When one of the regiments of volunteers from the Pacific coast was lately at San Francisco being mustered out after a year's service in the Philippines, a lady who belonged to a volunteers' aid association engaged one of the soldiers in conversation. She asked him:

"Were you well treated while you were in the east?"

"East, ma'am? I've never been east," he answered. "I was born in California, and I've never been farther east than Salt Lake City."

"But I mean the far east," she said.

"Well, ma'am, Salt Lake's far east to me. Never been farther."

"But you've been in Manila, haven't you?"

"Sure."

"But we call that the east, you know."

"Manila east? Well, I reckon it's a heap west of here. We started here and sailed straight west all the time till we got there."

"Yes, I know, but you can get east by sailing west, you know."

"Well, ma'am," answered the soldier, "I've been wanting to go east all my life, but if I've got to go that way to get there I'm going to stay right here all my life. I've got enough of gold east that way."—Youth's Companion.

Liquid Air in Surgery.

As in the case of the X rays, it is possible that one of the earliest practical uses of liquid air will be in surgery. Already experiments have indicated that a spray of liquid air can be applied as a local anesthetic, but the application should never be made except by an experienced operator. In a minute a small part of the body can be frozen as hard as ice, and surgical operations conducted with the aid of liquid air are attended with no hemorrhage. In The Medical Record Dr. A. C. White describes various experiments with liquid air, including the successful treatment of such diseases as sciatica, neuralgia and ivy poisoning. Boils and carbuncles can be aborted with liquid air, and it is useful in the treatment of ulcers.

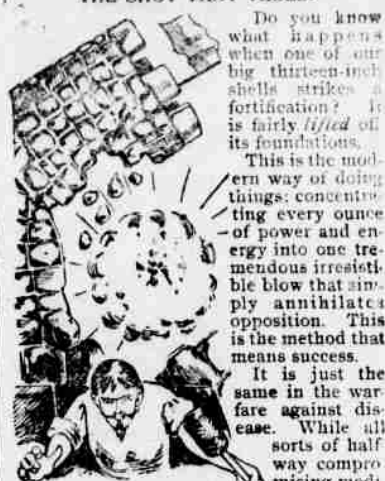

A Shorthand Typewriter.

A typewriter for shorthand that has lately been invented has only six keys. The type or characters are dots and dashes, and by ringing the changes on these it is possible to make a long alphabet. The keys can be worked simultaneously, the lines begin and end automatically, and a long roll of paper can be used. It is claimed that with the help of this machine shorthand can be written at a very great speed.

SHAKE INTO YOUR SHOES.

Allen's Foot-Ease, a powder. It cures painful, smarting, nervous feet and ingrowing nails, and instantly takes the sting out of corns and bunions. It's the greatest comfort discovery of the age. Allen's Foot-Ease makes tight or new shoes feel easy. It is a certain cure for sweating, callous and hot, tired, aching feet. Try it today. Sold by all druggists and shoe stores. By mail for 25c in stamps. Trial package FREE. Address, Allen S. Olmsted, Le Roy, N. Y.

THE SHOT THAT TELLS.

Do you know what happens when one of our big thirty-inch shells strikes? It is fairly typical of its foundations. This is the modern way of doing things, concentrating every ounce of power and energy into one tremendous irresistible blow that simply annihilates opposition. This is the method that means success.

It is just the same in the warfare against disease. While all sorts of half-measures are causing misery and suffering, the modern method is to concentrate every ounce of power and energy into one tremendous irresistible blow that simply annihilates opposition. This is the method that means success.

This is the method that means success.

It is just the same in the warfare against disease. While all sorts of half-measures are causing misery and suffering, the modern method is to concentrate every ounce of power and energy into one tremendous irresistible blow that simply annihilates opposition. This is the method that means success.

It is just the same in the warfare against disease. While all sorts of half-measures are causing misery and suffering, the modern method is to concentrate every ounce of power and energy into one tremendous irresistible blow that simply annihilates opposition. This is the method that means success.
