

A How To: Portable Apps Download & Installation

Go To Portableapps.com

To the left is a picture representing the home page to Portable Apps. Once here, Click on the link that says "Download Now"

This link will bring you to a page that gives you options on what exactly you want to download.

To the left is a screenshot of three different downloads you can choose from. I recommend choosing the "Platform Only" due to it's small file size and the ability to really customize the applications that are installed on your device.

Once on that page select "download" under the "platform only" Option.

Platform Only	Suite Light	Suite Standard
Download	Download	Download
1.5.1	1.5.1	1.5.1
2MB download	22MB download	110MB download
2MB installed	150MB installed	1.5GB installed
43 Apps	28000 Apps	10000 Apps
Multihost	Single	Single

Wow, that was easy. Now that you have gone through the installation process. just simply open portable apps from your usb device anytime you need your portable programs in a pinch.

Also, take the time to search the vast amounts of applications that are available for this platform at www.portableapps.com/apps

That link will take you to SourceForge.net, which is a host of servers dedicated to making open source software available to everyone.

Once you get to the page that matches the one on the right. Right click the pop-up blocker and select download file. This will bring up a message prompt such as the one to the right.

For this select "Save", and save this download onto your USB device.

Once downloaded go to your USB device and run the setup wizard, make sure you select the USB device that you have plugged in when the prompt asks you for location in which you would like to install portable Apps
