**Philip J. Kroth, MD**

*Associate Professor, School of Medicine*  
*Director, Biomedical Informatics Research,*  
*Training and Scholarship*  
**University of New Mexico**

***“Provider stress and electronic health records”***

While application of Health Information and Communication Technologies (HICT) has demonstrated significant potential to improve health care and reduced costs, the impact of HICT on health care professionals’ job satisfaction, productivity, and general wellness is largely unknown. Recent studies suggest that the impact of HICT on clinician stress and burnout may be considerable. Dr. Kroth will present on what is known about clinician stress and burnout that is attributable to the HICT design and outline his currently funded, multi-institutional study to look into this area with scientific rigor.
