Processing is an open source programming environment that is user friendly. The program allows people to create drawings, animations, sound and interactivity by writing code. It was founded by Ben Fry & Casey Reas who were both students of John Maeda's in MIT Media Lab.

Processing can be an interactive sketchbook which can be used by students, teachers, programmers researchers and artists alike. Processing:

- is free for download
- is an interactive program for 2D, 3D and PDF outputs
- is for PC, Mac, and Linux
- is OpenGL integration for accelerated 3D
