The best ideas are more exciting
in **concrete**

Stanford University Medical Center, Palo Alto, Calif. Architect: Edward D. Stone, New York. Structural Engineers: Pregnoff & Matheu, San Francisco, Calif.

Decorative patterns in concrete give unity and beauty to new medical center!

Hospital, clinic, school, research laboratory—the many activities of the new Stanford Medical Center require 7 separate buildings. To bring this complex into one harmonious whole, ingenious use has been made of modern concrete. Precast grilles provide a strong light-and-shadow pattern over large areas. They also set a design theme which is repeated in bold relief on other concrete surfaces throughout the Center. The elegant beauty achieved gives dramatic evidence of concrete's esthetic versatility and its structural advantages. Today, more than one architect is acquiring a reputation through the creative uses of modern concrete.
