

The background of the entire cover is a dark, textured surface. Overlaid on this is a complex, repeating geometric pattern. It consists of numerous thin, light-colored lines that form a series of overlapping circles and arcs. These lines intersect at various points, creating a web-like structure. At many of these intersection points, there are small, dark, square-shaped markers or fasteners. The overall effect is one of organic complexity and mathematical precision.

Monarch[®] TILE

GOES UNDERGROUND.....

Monarch[®] TILE

IN AN UNDERGROUND RESIDENCE.....

Thirteen feet underground is this striking eight-room home, constructed by Swayze Bros. in Plainview, Texas. With four bedrooms, three baths, a modern kitchen and year-'round air conditioning, it includes extensive installations of Monarch Tile. The builders claim it is a complete fall-out shelter, secure against fall-out, tornadoes, hailstorms, dust and germs. Heating and cooling require minimum equipment because of earth insulation, exterior maintenance is eliminated and insurance rates are one-eighth normal. Three feet of soil are over the home with eight-foot ceilings and 18 inches between the 3400 square feet inside shell and the 2800 square feet inside home, and a well, pressure tank and sewer lift are included. Technical and cost information are available from Monarch on request.
