concrete

ONE OF A SERIES

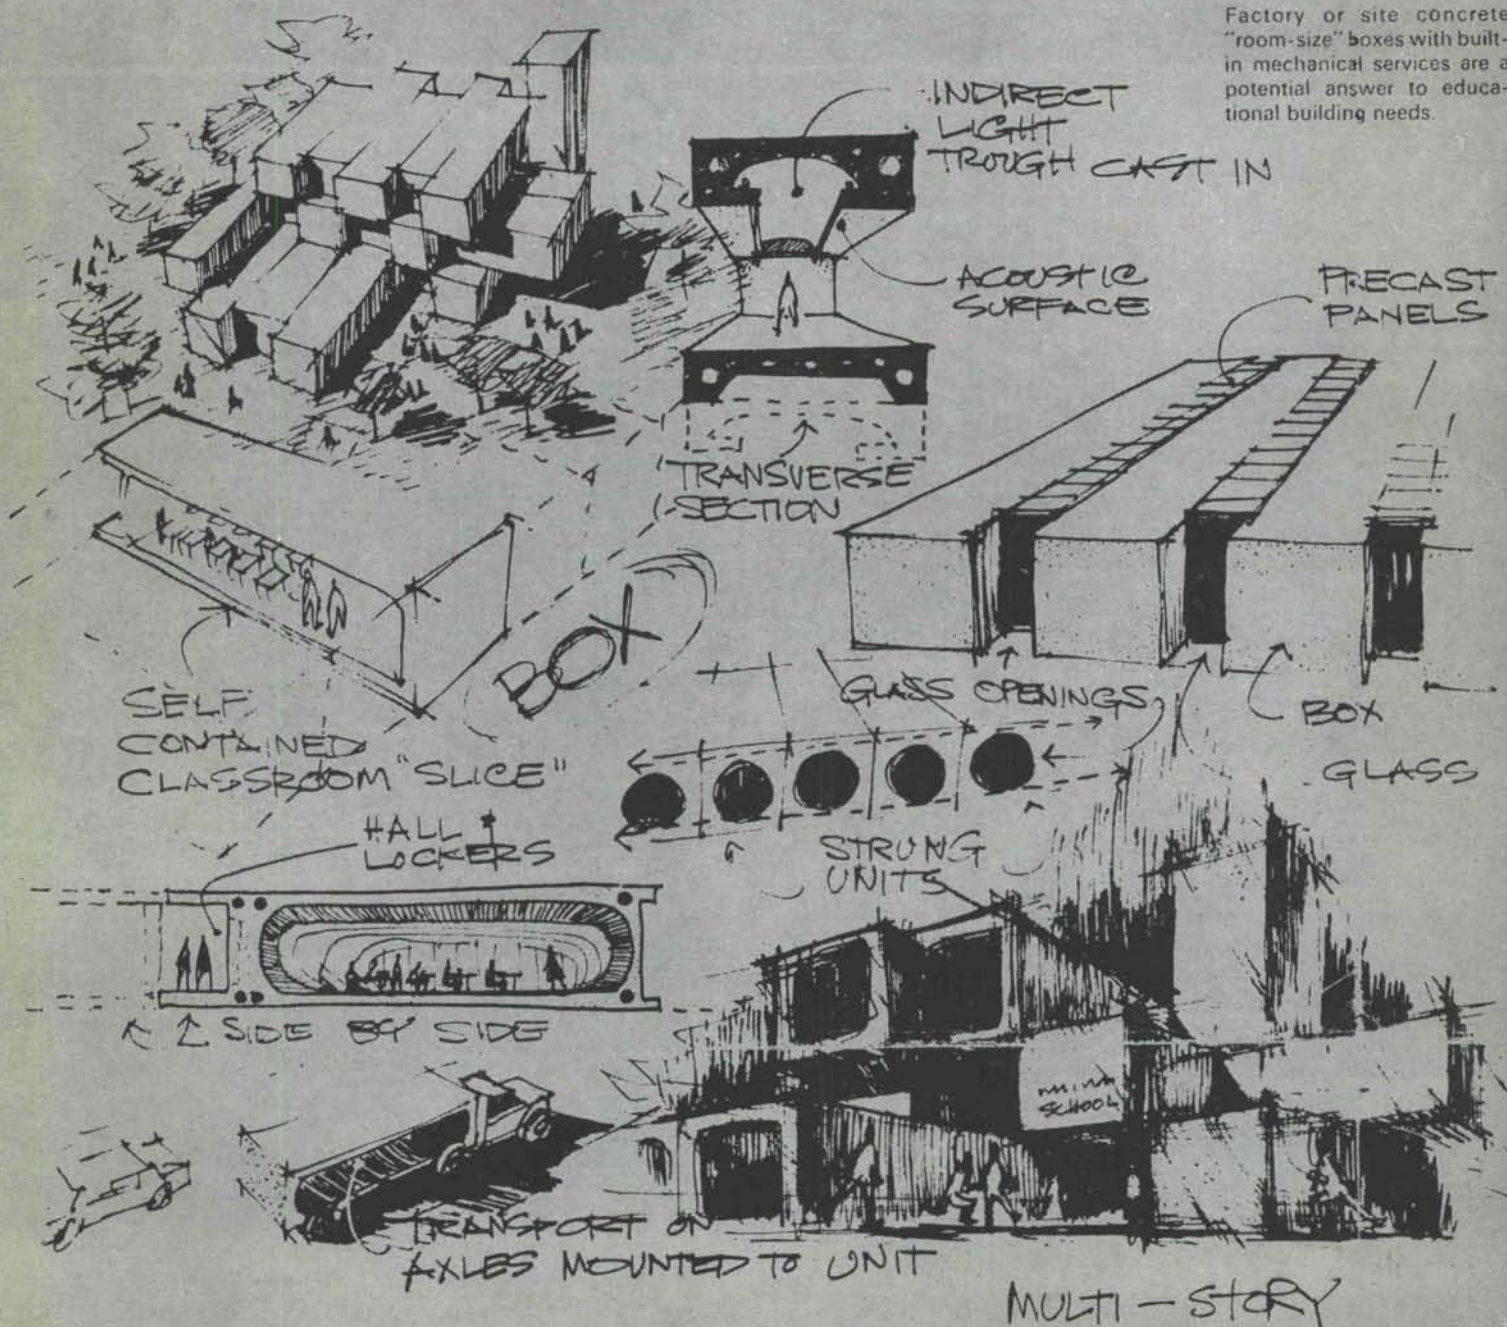

stimulus to broader design thinking in SYSTEMS BUILDING FOR SCHOOLS

Architects everywhere are finding that the integration of manufactured environmental and structural systems is changing the scope of school design.

And once again, concrete demonstrates its compatibility with the newest concepts in architecture and construction.

In systems building particularly, the design flexibility of concrete brings vital advantages. No other building material provides such broad opportunity for the effective welding of aesthetic and functional values in highly engineered systems.

Factory or site concrete "room-size" boxes with built-in mechanical services are a potential answer to educational building needs.

ONE IDEA LEADS TO ANOTHER

These idea sketches are just a few examples of concrete's potential for innovative design.

In further exploration of the systems building concept, you'll find PCA can help . . . through its technical literature and its nationwide staff of architects, engineers and specialists. Call the PCA office nearest you, or write for additional information. (U.S. and Canada only)

"Chaparral" Apartment Complex — Albuquerque
W. Miles Brittelle, Jr. — Architect

"Trus Joist enabled us to take advantage of time and money saving ideas used in heavy construction jobs —"

" . . . and still retain the standard framing crews and cost of light construction. We lost no time waiting for pipes and conduit to be cut into solid floor joist and were able to work more crews at the same time. We were able to have all these advantages without paying a premium per square foot of covered area."

So says job superintendent, Rue Lazell, the man in a key position to know costs and the need for innovation in building.

This is another example of T. J. versatility. Versatility that saves time and money.

*In this
fine Brentwood home...
there is no compromise
with quality*

THE SPECIFICATIONS CALLED FOR GENUINE CLAY MISSION TILE

Rustic charm, achieved through the skillful use of clay mission tile and other age-old building materials, characterizes this superbly designed home in Brentwood, California. Since the days of the Dons, clay mission tile has been a distinctive mark of residential architecture. It imparts beauty, color and an unmistakable stamp of quality to the contemporary architecture of today, as it did to the traditional architecture of the past. Recognizing its unique versatility, Architect Jack White specified only genuine clay mission tile—from the kilns of San Vallé. After all, if it isn't clay... it isn't tile.
