## A concrete example of fast construction.

From raw land to ribbon cutting in 7 months.

The Venn W. Furgeson Elementary School in Hawaiian Gardens, California is an outstanding example of the speed, economy and functional beauty of concrete construction.

One requirement of this design was that it accommodate the school's "team teaching" method, with wall partitions and doors that can be easily moved to provide any number or size of classrooms.

This problem was solved by the use of 105-foot prestressed concrete channels for the roof system of all three buildings. This gave the interior a clear span of 99-feet.

In addition to complete flexibility of classroom arrangement, this system provides the aesthetic appeal of a clean, flat roof line, and built-in ducts for air conditioning and heating. And it is fire resistant, offering additional safety for children.

*A brochure with additional information on this structure is available on request.*

It's easy to see why the best ideas are more exciting in concrete.

Venn W. Furgeson School, A.B.C. Unified School District. Architect—Duffy & Dreher A.I.A., Long Beach, Calif.; Structural Engineer—Bole & Wilson, Long Beach, Calif.; General Contractor—Harwick & Son, Inc., Newport Beach, Calif.; Precast Contractor—Interpace Precast Concrete Producers, Pomona, Calif.

## New double-insulated Dyzone roof deck is self-venting

**1** On top, a layer of seamless, permanent Zonolite lightweight insulating concrete that can be sloped to drain easily and economically, so leak-making puddles and ponds don't stay on the deck.

**2** Below, Dyfoam Ventboard. It's composed of Dyfoam expanded polystyrene boards sandwiched between laminating material. The insulating concrete combined with Dyfoam Ventboard gives you economical U values down to .03.

**3** Vents are built right into the Dyfoam Ventboard. Water vapor passes through the laminating material into the vents, and is channeled out to the edges of the roof.

No joints, no tape, no adhesives, no vapor barrier are needed with the new Dyzone roof deck. A thin slurry of Zonolite insulating concrete serves as the bonding agent between deck and structure.

Zonolite roof decks can only be applied by applicators we have trained and approved. Upon completion, the decks are certified to meet specifications.

<b>MAIL THIS:</b> <b>Zonolite Div., W. R. Grace &amp; Co.</b> <b>Dept. HM-03</b> <b>c/o Southwest Vermiculite Co.</b> <b>5119 Edith Blvd.</b> <b>Albuquerque, N. M. 87107</b>	
<b>GRACE</b>	
Gentlemen: Economical insulation down to U .03! Certified! Versatile! No messing around with joints, tape, glue or vapor barriers! Please send me complete information and specifications on DYZONE roof decks right away.

## **Another big one goes all-electric**

The all-electric concept proves itself once again, this time in the new high-rise dormitory at Highland's University in Las Vegas. This educational complex is one more important addition to the long list of all-electric projects owned and operated by major New Mexico concerns.

Electric space conditioning systems can save builders 10% to 30% in initial installation costs. With electric systems, expensive stacks, flues and vents are eliminated. Freedom of design in all-electric buildings is almost unlimited. Less room is required for the central space conditioning plant. The result is a low first cost, low maintenance building with very competitive per square foot operating cost. Add up all the advantages and savings and you'll find the all-electric building invariably has the lowest total annual owning and operating cost.

The Public Service Company's Engineering Sales Department will be happy to show you how to apply the all-electric concept to your commercial or industrial building. Write:
