Get more school for your money with an All-Electric design.

You can buy a language lab, cafeteria or even three extra classrooms with the money you save in owning and operating costs with an All-Electric design. You get extra comfort and cleanliness, too.

School board after school board has discovered that the All-Electric school eliminates many expensive first cost items, and they require less mechanical supervision. An All-Electric school minimizes yearly maintenance costs as well. School boards have also discovered how the flexibility of an All-Electric design permits economic installation of air cooling—either initially or at a later date.

Another advantage of going All-Electric is the greater freedom for architectural design, which usually results in added floor space and easier expansion in the future. If you're building a new school or expanding an old one, consider going All-Electric. Talk to the Sales Engineering Staff at the Public Service Company of New Mexico. They'll be glad to help.

Public Service Company of New Mexico

If Henry III had only specified Zonolite Masonry Fill, the savings would have already exceeded £875,000.

Assuming, of course, Westminster Abbey has been getting heating bills for the last 700 years.

By now, Zonolite® Masonry Fill Insulation would not only have paid for itself... but the building too!

Today, Zonolite frequently pays for itself within two or three heating seasons. And it will probably make possible a lower investment in heating and cooling equipment.

It's also economical to install. A lightweight, free-flowing, granular vermiculite, Zonolite fills walls up to 20 feet in height in a single pour. And it's permanently water-repellent.

Get the complete savings story from your Zonolite man-on-the-job. Construction Products Division, W. R. Grace & Co., 62 Whittemore Ave., Cambridge, Massachusetts 02140.

why not have a parking structure?

**WITH PRESTRESSED CONCRETE
A PARKING STRUCTURE IS
ECONOMICAL, PERMANENT
AND PRACTICAL.**

Shown is the new 62' x 432' parking structure at Three Fountains Apartment Complex in Albuquerque. The structure was built on 62' x 8' x 24" twin prestressed concrete tees. The structure accommodates 200 cars and is attached to the courtyard by two 8' wide Prestressed Concrete foot bridges.

... the test of time.

TRUS JOIST does it year in and year out and Leslie F. Baker, of Baker Construction Company, recognizes that fact. His experience with TRUS JOIST on numerous jobs has told him so. He put it this way

"As one of the first TRUS JOIST customers in this area, we are finding the reasons we used them are as valid as ever. Congratulations on standing the test of time."

Like he says, the reasons are valid as ever.

Use them once, and you'll know what he means.
