## IN THIS ISSUE:

Ralph Warburton, AIA, AIP, Hon. AID was one of several guest speakers at the Rocky Mountain-California South Bi-Regional Conference of the American Institute of Interior Designers held in Santa Fe this past April. He chose as his subject, "A New Emphasis in Interior Design;" his address is presented here, beginning on page 21.

Until July 1st, Mr. Warburton was Special Assistant for Urban Design for the U. S. Department of Housing and Urban Development, Washington, D. C. He now joins the University of Miami, Coral Gables, Florida, as professor and chairman of the Department of Architecture and Architectural Engineering. He received a Bachelor of Architecture degree from the Massachusetts Institute of Technology. He received Master of Architecture and Master of City Planning degrees, and the William E. Parsons Medal in Urban Design from Yale University. Mr. Warburton has served as an urban development consultant to the government of Iran and, prior to assuming his HUD responsibilities in 1967, he was Associate and Chief of Planning with Skidmore, Owings and Merrill, Architects-Planners - Engineers of Chicago. Author of over 50 professional articles, Mr. Warburton was associate author of the award-winning book, "Man-Made America: Chaos or Control?", published in 1963; guest editor of the 1968 special issue of the Journal of the Franklin Institute, "New Concepts in Urban Transportation Systems"; and editor of the 600 page volume, "Housing Systems Proposals for Operation Breakthrough", and of "Focus on Furniture", both published in 1971.

In the next issue of NMA more from that AID Conference. The interior design students from the University of Northern Arizona presented a provocative and challenging program. Watch for it in NMA.

**The advantages  
of genuine  
clay roofing tile  
are not  
as simple as  
black and white**

In this ad we can't possibly show you one of the most important advantages of genuine clay tile. Because to do so, we'd need color. So if you'd like to see for yourself just what a difference there is in the variety of permanent colors of San Vallé roofing tile, write and ask to be included on the mailing list for our monthly, full-color postcard series.

flowers  
are delicate things.

## That's Why So Many Greenhouses are Heated With Natural Gas.

Water vapor is one by-product of gas heat. Carbon dioxide (which we exhale) is the other. And house plants need both to thrive and grow. Greenhouse operators have known about the benefits of gas heat for years. They are also pleased that gas heats for a fraction of electricity's cost.

Heat that's good for flowers is good for people. Better for people, in fact, because central gas heating filters out the lint and dust that are a natural part of the air in every room. Which are things that dispersed electric resistance heating certainly can't do!

More than that, gas heat gives you the best in all-over warmth, floor to ceiling and wall to wall. You'll revel in the comfort of gas heat. And your house plants will thrive in it.

If you want the job done right... do it with gas.

## New double-insulated Dyzone roof deck is self-venting

**1** On top, a layer of seamless, permanent Zonolite lightweight insulating concrete that can be sloped to drain easily and economically, so leak-making puddles and ponds don't stay on the deck.

**2** Below, Dyfoam Ventboard. It's composed of Dyfoam expanded polystyrene boards sandwiched between laminating material. The insulating concrete combined with Dyfoam Ventboard gives you economical U values down to .03.

**3** Vents are built right into the Dyfoam Ventboard. Water vapor passes through the laminating material into the vents, and is channeled out to the edges of the roof.

No joints, no tape, no adhesives, no vapor barrier are needed with the new Dyzone roof deck. A thin slurry of Zonolite insulating concrete serves as the bonding agent between deck and structure.

Zonolite roof decks can only be applied by applicators we have trained and approved. Upon completion, the decks are certified to meet specifications.

## the WORRY FREE ALL CONCRETE BUILDING

The new Los Altos twin theatres in Albuquerque feature 8' x 12" deep prestressed concrete twin tee roof and walls with spans up to 35 feet.

The 138' x 72' building has approximately

10,000 square feet of roof members and 7,000 square feet of wall sections, giving lasting strength and maximum fire resistance.

Also furnished were precast columns, beams and fascia panels.

this office has practically no heating expense . . .  
most of the heat is provided by light!

Today, heat recovered from fluorescent luminaires is a practical working reality in hundreds of installations throughout the country. During the times when modern, well-lighted buildings are occupied, Heat-With-Light delivers free comfort heating energy at savings of thousands of dollars!

Of the total energy input to a fluorescent lamp, 80% of the energy is released in the form of heat. Knowing this, it became a simple matter to design a duct-fan system, to move air through luminaires, picking up surplus heat and moving it out to warm a space. In summer, the same system moves the heat outdoors, taking an enormous load off air conditioning equipment.

Contact us today for complete details on applying the Heat-With-Light system for your next building.
